Nomenclature	IX
1 Introduction	1
1.1 Background	1
1.2 Motivation	4
1.3 Objectives	7
1.4 Organization of this thesis	7
2 Trailing edge noise reduction	9
2.1 Trailing edge blowing (TEB)	9
2.2 Trailing edge serrations (TES)	12
2.3 Porous trailing edge (PTE)	16
2.4 Critical assessment	17
3 Simulation Methodology	19
3.1 The numerical Lattice BOLTZMANN Method (LBM)	19
3.2 Porous media formulation in LBM	22
3.3 Acoustic prediction in LBM	23
3.4 LAGRANGIAN Coherent Structures	24
3.5 Further quantities for evaluation	25
4 Trailing edge blowing (TEB)	29
4.1 Basic airfoil and TEB configuration	29
4.2 LBM-simulation case set-up	30
4.3 Experimental set-up	33
4.3.1 The AWB wind tunnel	33
4.3.2 Airfoil section and instrumentation	34
4.3.3 Far-field noise measurement	37
4.4 Results	37
4.4.1 Validation of LBM results	37
4.4.2 Sound mitigation due to TEB	40
4.4.3 In-depth analysis of TEB sound mitigation mechanism	41
4.5 Intermediate conclusions	46
5 Trailing edge serrations (TES)	49

5.1 Basic airfoil and TES configuration.....	49
5.2 LBM-simulation case set-up	50
5.3 Experimental set-up	51
5.4 Results	52
5.4.1 Flow-field	52
5.4.2 Acoustic results	54
5.4.3 Flap angle study	55
5.4.4 In-depth analysis of TES sound mitigation mechanism.....	59
5.5 Intermediate conclusions.....	62
6 Porous trailing edge (PTE)	65
6.1 Basic airfoil and PTE configuration.....	65
6.2 LBM-simulation case set-up	66
6.3 Experimental set-up	69
6.4 Results	69
6.4.1 Boundary layer statistics	69
6.4.2 Mean and turbulence quantities	69
6.4.3 Velocity fluctuation spectrum	71
6.4.4 Acoustic results	73
6.4.5 In-depth analysis of PTE sound mitigation mechanism.....	74
6.5 Intermediate conclusions.....	76
7 Summary and overall conclusions	79
Appendix	85
