1	Introduction	1
1.1	Background	1
1.2	Flame Synthesis of Nanoparticles	2
1.3	Coagulation of Nanoparticles in Flames	6
1.4	Sintering of Nanoparticles	8
1.5	Deposition of Nanoparticles and Synthesis of NanoPorous Films	11
1.6	In Situ Optical Diagnostics on NanoAerosol System	12
1.7	Road map of Present Study	14
	References.	15
2	Synthesis of TiO₂ Nanoparticles by Stagnation Swirl Flame	21
2.1	Experimental Methods	21
2.2	Population Balance Modeling of Nanoparticle Coagulation in Stagnation Swirl Flame	24
2.2.1	Comparison of Characteristic Times for Different Steps	24
2.2.2	Modeling of Particle Coagulation in Flames	27
2.2.3	Modeling Results and Comparison with Experiments	31
2.3	Synthesis of TiO ₂ Nanoporous Films by Stagnation Swirl Flame	33
2.4	Pilot-Scale Experiments of TiO ₂ Nanoparticle Synthesis by Stagnation Swirl Flame	35
2.5	Summary	37
	References.	37
3	Laser Diagnostics on Nanoparticles in Flames	39
3.1	Introduction	39

3.2	Measurement of Temperature Profile of the Stagnation Swirl Flame	40
3.2.1	Photon Scattering	40
3.2.2	Measurement of Temperature Field Using Rayleigh Scattering	41
3.2.3	Measurement of Temperature Profile Using Raman Scattering	49
3.3	Diagnostics of TiO ₂ Nanoparticles in Flames by Phase-Selective Laser-Induced Breakdown Spectroscopy	55
3.3.1	A Brief Review of Laser-Induced Breakdown Spectroscopy (LIBS)	55
3.3.2	Laser Diagnostics of Aerosols and Original Idea of Phase-Selective LIBS	59
3.3.3	Experimental Phenomena of Phase-Selective LIBS	61
3.3.4	Time-Resolved Analysis of Laser-Induced Nanosized Plasmas	64
3.3.5	Effect of Laser Fluence	66
3.3.6	Effect of Particle Size	66
3.3.7	In Situ Measurement of Particle Volume Fraction	68
3.3.8	Two-Dimensional Imaging of Particle Volume Fraction	69
3.3.9	Phase-Selective LIBS Diagnostic on the Simultaneous Formation of Multi-component Metal Oxides	70
3.4	Summary	73
	References	74
4	Molecular Dynamics Study on Nanoparticle Collision and Coalescence	77
4.1	Introduction	77
4.2	Brief Introduction of Computational Method	78
4.2.1	Ensemble	78
4.2.2	Fundamental Algorithm	79
4.2.3	Potential	80
4.2.4	Simulation Procedure	81
4.3	Interaction Forces Between TiO ₂ Nanoparticles	86
4.3.1	Brief Review of Interaction Forces Between Nanoparticles	86
4.3.2	MD Simulation Settings	95
4.3.3	Results and Discussion	96
4.4	Enhancement of Particle Collision Rate by Long-range Interaction Forces	103
4.4.1	Collision Mechanisms in an Aerosol System	103
4.4.2	Collision Frequency Function for Brownian Coagulation	104

4.4.3	Effect of Inter-particle Forces on Collision Rate	105
4.4.4	Simulation Methods and Conditions	108
4.4.5	Results and Discussions	110
4.5	Grain Structure of Single TiO ₂ Nanoparticles	115
4.5.1	Grain Structure of Nanoparticles and Melting-Point Depression	116
4.5.2	Simulation Settings and Data Extraction	118
4.5.3	Results and Discussions	119
4.6	Coalescence of Two TiO ₂ Nanoparticles	124
4.6.1	A Brief Introduction to Particle Sintering	124
4.6.2	Particle Coalescence in High-Temperature Nanoaerosols	126
4.6.3	Simulation Settings and Data Extraction	128
4.6.4	Results and Discussions	130
4.7	Summary	139
	References	140
5	Deposition of Nanoparticles in Stagnation Flames	145
5.1	Deposition Mechanisms	145
5.2	Experimental Study on Nanoparticle Deposition Flux in Stagnation Flames	148
5.2.1	Experimental System	148
5.2.2	A Typical Radial Distribution of Deposition Flux	149
5.3	Theoretical Analysis on Nanoparticle Transport and Deposition in Boundary Layer of Stagnation Flames	150
5.3.1	Velocity and Temperature Profile in Boundary Layer	150
5.3.2	Simplification of Particle Transport Equation in the Boundary Layer	155
5.3.3	Simplified Approach Within the Stationary Layer	156
5.3.4	Particle Transport Within the Entire Boundary Layer	159
5.3.5	Discussion on Experimental Results of Deposition Flux	163
5.4	The Structure and Morphology of Deposited Nanofilms	165
5.4.1	Experimental Methods	166
5.4.2	The Morphology and Packing Density of Nanofilms	167
5.4.3	Simplified Deposition Model for Particle Packing	170
5.4.4	The Specific Surface Area (SSA) of Nanofilms	174
5.5	Summary	176
	References	177
