Preface ix

1	Introduction of Optical Imaging and Sensing: Materials, Devices, and Applications	1
	<i>Qimiao Chen, Hao Xu, and Chuan S. Tan</i>	
1.1	Optoelectronic Material Systems	1
1.1.1	Si Platform	1
1.1.2	Two-dimensional Materials and Their van der Waals Heterostructures	3
1.1.2.1	Graphene	3
1.1.2.2	Transition Metal Dichalcogenides	4
1.1.2.3	2D Heterostructures	5
1.2	Challenges and Prospect of Nano-optoelectronic Devices	5
1.2.1	III-V Compounds	6
1.2.2	Perovskites	7
1.2.3	Organic Optoelectronic Materials	7
	References	8
2	2D Material-Based Photodetectors for Imaging	11
	<i>Wenshuo Xu, Zhuo Wang, and Andrew T. S. Wee</i>	
2.1	Introduction	11
2.2	Visible-Light Photodetectors	15
2.3	Infrared Photodetectors	21
2.4	Broadband Photodetectors	26
2.5	Plasmon-Enhanced Photodetectors	36
2.6	Large-Scale and Flexible Photodetectors	44
2.7	Summary	49
	References	50
3	Surface Plasmonic Resonance-Enhanced Infrared Photodetectors	55
	<i>Boyang Xiang, Guiru Gu, and Xuejun Lu</i>	
3.1	Introduction	55

- 3.2 Brief Review of Basic Concepts of SPR and SPR Structures 56
 - 3.2.1 Plasma Oscillations in Metals 56
 - 3.2.2 Complex Permittivity and the Drude Model 56
 - 3.2.3 Surface Plasmonic Waves at the Semi-infinite Dielectric and Metal Interface 57
 - 3.2.4 Prism-Coupled Surface Plasmonic Wave Excitation 59
 - 3.2.5 Surface Grating-Coupled Surface Plasmonic Wave Excitation 60
- 3.3 Surface Plasmonic Wave-Enhanced QDIPs 61
 - 3.3.1 Two-Dimensional Metallic Hole Array (2DSHA)-Induced Surface Plasmonic Waves 61
 - 3.3.2 2DSHA Surface Plasmonic Structure-Enhanced QDIP 64
- 3.4 Localized Surface Plasmonic Wave-Enhanced QDIPs 68
 - 3.4.1 Localized Surface Plasmonic Waves 68
 - 3.4.2 Near-Field Distributions 68
 - 3.4.3 Nanowire Pair 69
 - 3.4.4 Circular Disk Array for Broadband IR Photodetector Enhancement 71
- 3.5 Plasmonic Perfect Absorber (PPA) 72
 - 3.5.1 Introduction to Plasmonic Perfect Absorber 72
 - 3.5.2 Plasmonic Perfect Absorber-Enhanced QDIP 74
 - 3.5.3 Broadband Plasmonic Perfect Absorber 76
 - 3.5.4 2DSHA Plasmonic Perfect Absorber 76
- 3.6 Chapter Summary 76
- References 78

- 4 Optical Resistance Switch for Optical Sensing 83**
Shiva Khani, Ali Farmani, and Pejman Rezaei
 - 4.1 Introduction 83
 - 4.2 Graphene Optical Switch 85
 - 4.2.1 DC Mode of the Gate Capacitor 87
 - 4.2.2 AC Mode of the Gate Capacitor 89
 - 4.3 Nanomaterial Heterostructures-Based Switch 93
 - 4.3.1 Situation 1: $n_2L \gg n_2H$ 95
 - 4.3.2 Situation 2: $n_2H \gg n_2L$ 96
 - 4.3.3 Situation 3: $n_2H \simeq n_2L$ 96
 - 4.4 Modulation Characteristics 104
 - 4.5 Summary 115
 - References 115

- 5 Optical Interferometric Sensing 123**
Hailong Wang and Jietai Jing
 - 5.1 Introduction 123
 - 5.2 Nonlinear Interferometer 124
 - 5.2.1 Experimental Implementation of Phase Locking 125
 - 5.2.2 Quantum Enhancement of Phase Sensitivity 131
 - 5.2.3 Enhancement of Entanglement and Quantum Noise Cancellation 136

5.3	Other Types of Nonlinear Interferometers	143
5.3.1	Nonlinear Sagnac Interferometer	143
5.3.2	Hybrid Interferometer with a Nonlinear FWM Process and a Linear Beam-splitter	151
5.3.3	Experimental Implementation of a Phase-Sensitive Parametric Amplifier	155
5.3.4	Interference-Induced Quantum-Squeezing Enhancement	160
5.4	Nonlinear Interferometric SPR Sensing	164
5.5	Summary and Outlook	173
	References	173
6	Spatial-frequency-shift Super-resolution Imaging Based on Micro/nanomaterials	175
	<i>Mingwei Tang and Qing Yang</i>	
6.1	Introduction	175
6.2	The Principle of SFS Super-resolution Imaging Based on Micro/nanomaterials	177
6.3	Super-resolution Imaging Based on Nanowires and Polymers	178
6.4	Super-resolution Imaging Based on Photonic Waveguides	184
6.4.1	Label-free Super-resolution Imaging Based on Photonic Waveguides	184
6.4.2	Labeled Super-resolution Imaging Based on Photonic Waveguides	186
6.5	Super-resolution Imaging Based on Wafers	189
6.5.1	Principle of Super-resolution Imaging Based on Wafers	189
6.5.2	Label-free Super-resolution Imaging Based on Wafers	194
6.5.3	Labeled Super-resolution Imaging Based on Wafers	195
6.6	Super-resolution Imaging Based on SPPs and Metamaterials	197
6.6.1	SPP-assisted Illumination Nanoscopy	199
6.6.1.1	Metal-Dielectric Multilayer Metasubstrate PSIM	200
6.6.1.2	Graphene-assisted PSIM	202
6.6.2	Localized Plasmon-assisted Illumination Nanoscopy	203
6.6.3	Metamaterial-assisted Illumination Nanoscopy	204
6.7	Summary and Outlook	206
	References	208
7	Monolithically Integrated Multi-section Semiconductor Lasers: Toward the Future of Integrated Microwave Photonics	215
	<i>Jin Li and Tao Pu</i>	
7.1	Introduction	215
7.2	Monolithically Integrated Multi-section Semiconductor Laser (MI-MSSL) Device	219
7.2.1	Monolithically Integrated Optical Feedback Lasers (MI-OFLs)	219
7.2.1.1	Passive Feedback Lasers (PFLs)	220
7.2.1.2	Amplified/Active Feedback Lasers (AFLs)	224

- 7.2.2 Monolithically Integrated Mutually Injected Semiconductor Lasers (MI-MISLs) 225
- 7.3 Electro-optic Conversion Characteristics 229
 - 7.3.1 Modulation Response Enhancement 229
 - 7.3.2 Nonlinearity Reduction 237
 - 7.3.3 Chirp Suppression 238
- 7.4 Photonic Microwave Generation 238
 - 7.4.1 Tunable Single-Tone Microwave Signal Generation 240
 - 7.4.1.1 Free-Running State 240
 - 7.4.1.2 Mode-Beating Self-Pulsations (MB-SPs) 242
 - 7.4.1.3 Period-One (P1) Oscillation 244
 - 7.4.1.4 Sideband Injection Locking 245
 - 7.4.2 Frequency-Modulated Microwave Signal Generation 248
 - 7.4.3 High-Performance Microwave Signal Generation Optimizing Technique 250
- 7.5 Microwave Photonic Filter (MPF) 254
- 7.6 Laser Arrays 256
- 7.7 Conclusion 259
 - Funding Information 261
 - Disclosures 261
 - References 261
- Index 271**
