

1	The Concept of Information—An Introduction	1
1.1	Motivation and Goals	1
1.2	Computer Science and Information	3
1.3	Information Technology and Information	4
1.4	Physics and Information	7
1.5	Information in Biology	10
1.6	Philosophy and Information	12
1.6.1	Structure of the Information	12
1.6.2	Information About Information	15
1.6.3	Categorization of Information	16
2	Information—Physically and Dynamically Based	19
2.1	Objectivity of the Information	19
2.2	Subject and Information	19
2.3	Information Transfer	21
2.3.1	Dynamics of the Information	21
2.3.2	Quasistatic Information in Computer Technology	22
2.3.3	Time and Space	22
2.3.4	Energy Transfer	24
2.4	Definition of Dynamic Information	24
2.4.1	Quantum Mechanical Limits of Information Transmission	24
2.4.2	HEISENBERG's Uncertainty Relation	26
2.4.3	Phenomenological Foundation of Dynamic Information	28
2.4.4	Parallel Channels	30
2.4.5	Transfer 1 Out of N	31
2.5	Representation of Quantum Bits	33
2.5.1	Qubits—Description with the Formalism of Quantum Mechanics	34
2.5.2	Measurement	36
2.5.3	HADAMARD Transform	38

2.5.4	Polarization of Photons	40
2.5.5	Systems of Two Quantum Bits	41
2.5.6	Qbits—Description with the Formalism of Automata Theory	43
2.5.7	No-cloning Theorem	46
2.5.8	Quantum Computing	47
2.5.9	Physical Realizations of Quantum Bits	49
2.6	Properties of Dynamic Information	51
2.6.1	Dynamic Information and Quantum Bits	51
2.6.2	Signal and Information	52
2.6.3	Valuation of Entropy by the Transaction Time	53
2.6.4	Valuation of Entropy by Energy	54
2.6.5	Objectivity of Energy and Information	55
2.6.6	Conservation of Information	57
2.6.7	Destruction and Creation of Physical States and Particles	61
2.6.8	Hypothesis: Variable Relationships Between Information to Energy?	61
2.6.9	Redundancy	63
3	A Comparative View on the Concept of Information	67
3.1	SHANNON Information	67
3.2	Definition by JAGLOM	68
3.3	Algorithmic Information Theory	68
3.4	Information and Knowledge	71
3.5	Potential and Actual Information	71
3.6	Syntactic and Semantic Information	72
3.7	Interpretations by CARL FRIEDRICH VON WEIZSÄCKER	72
3.8	Theory of <i>ur</i> Alternatives	74
3.9	Pragmatic Information	75
3.10	Transinformation	76
3.11	Information in Business Sciences	76
3.12	Relational Information Theory	77
3.13	Entropy and Information	78
3.14	Equivalence Information and Energy	78
3.15	Further Definitions	80
3.16	What is Information?	80
4	Entropy and Information	83
4.1	Entropy in Information Technology—Basics	83
4.1.1	The Concept of Entropy	83
4.1.2	RENYI Information	83
4.1.3	Entropy of a Probability Field	85
4.1.4	Entropy of a Probability Field of Words	88

4.1.5	Enhancements of the Entropy Concept	88
4.1.6	Applicability of the Entropy	90
4.1.7	Negentropy.	90
4.2	Entropy in Thermodynamics	92
4.2.1	Basics of Thermodynamics	92
4.2.2	Entropy, Energy, and Temperature.	93
4.2.3	Components of Entropy: Energy and Volume	96
4.3	Entropy in Quantum Mechanics	99
4.3.1	Entropy of the Wave Function	99
4.3.2	Density Matrix and Entropy	100
4.3.3	BRUKNER-ZEILINGER Information	101
4.3.4	Information About a State	102
4.4	Computers and Thermodynamics	102
4.4.1	Transmission in the Presence of Thermal Noise	103
4.4.2	The LANDAUER principle.	103
4.4.3	Reversible Computing	105
4.4.4	Energy Conversion in Computers	105
4.5	Entropy Flow in Information Technology	107
4.5.1	Stationary Information in Classical Mechanics.	107
4.5.2	Bits and Quantum Bits.	109
4.5.3	Entropy Transmission	110
4.5.4	Entropy Flow	111
4.5.5	Degrees of Freedom and Freedom.	113
5	Dynamic Information and Thermodynamics	117
5.1	Elementary Information Transfer in Thermodynamic Systems.	117
5.2	Asynchronous Energy and Entropy Transfer	117
5.3	First Law of Thermodynamics and Dynamic Information	118
5.4	Adiabatic Processes—Scaling	119
5.4.1	Classical Ideal Gas.	119
5.4.2	Real Gases	122
5.4.3	Quantum Systems	122
5.4.4	The Flow of Dynamic Information in Adiabatic Processes.	124
5.4.5	Parallelization of Data Streams	126
5.4.6	Serialization of Data Streams	132
5.5	Isothermal Processes—Phase Transformation in Solids	132
5.6	Temperature Dependence of Entropy	134
5.7	Noise	136
5.7.1	Noise as a Disturbance.	136
5.7.2	Noise and Information.	136
5.7.3	Noise Sources	137
5.7.4	Quantum Mechanical Noise	139

6	Irreversible Processes and Structure Formation	141
6.1	Irreversible Processes	141
6.1.1	Time Symmetry and Irreversibility	141
6.1.2	Thermodynamic Equilibrium	142
6.1.3	Irreversibility and Objectivity	142
6.1.4	Dissipation	150
6.1.5	Information Conservation and Irreversibility	157
6.2	Formation of Structure	158
6.2.1	Chaos Theory—Interpretation of Information	158
6.2.2	Structure Formation and Entropy	159
6.2.3	Order, Order Parameters and Entropy	165
7	Consciousness	167
7.1	Consciousness and the Strong AI Hypothesis	167
7.2	Consciousness: Overview and Introduction	169
7.2.1	Consciousness in Language Use and Delimitations	169
7.2.2	Consciousness in Philosophy	170
7.2.3	Consciousness and Information	172
7.2.4	Limited Self-Awareness	173
7.2.5	Is Consciousness Definable?	173
7.3	Components of Consciousness	174
7.4	Formal Logical Systems	176
7.4.1	Definition	176
7.4.2	Contradictions in Formal Logical Systems	178
7.4.3	Contradictions in Systems with Consciousness	179
7.4.4	Attractiveness of Contradictory Systems	180
7.5	The Self-Reference in Mathematics	181
7.6	Limits of Self-Knowledge Due to Self-Reference	185
7.7	Self-Reference in Electronics	186
7.8	Algorithmic Considerations	188
7.8.1	Self-Reference in Algorithms	188
7.8.2	Loops in Algorithms	189
7.8.3	Algorithmic Requirements for Consciousness	190
7.8.4	Consciousness and Life	194
7.9	Consciousness and Time	195
7.10	Juridical and Political Aspects	196
7.11	Summary	197
8	Astronomy and Cosmology	199
8.1	Relativistic Effects	199
8.2	Light Cones	200

8.3	Event Horizon	201
8.4	Entropy of Black Holes	202
8.5	The Universe and Its Evolution	206
9	Resume	209
	References	211
	Index	217
