ABSTRACT	11
RESUMO	13
ZUSAMMENFASSUNG	15
ACKNOWLEDGEMENTS	17
LIST OF ABBREVIATIONS	19
INTRODUCTION	23
Chapter 1 – The traditional economic-legal approach to the environmental and waste problems	27
A. The economic-legal approach	27
B. Environmental economics	31
C. The legal parallel: managerial, single-point, pollution-oriented, production-related environmental law	37
D. The insufficiency of the traditional approach	40
E. Summary	42
Chapter 2 – Theoretical reconstruction: sustainable development and its legal implementation	44
A. Sustainable development in context	44
B. Sustainable development in environmental-economic theory	48
C. Sustainable development in ecological-economic theory and the contribution of Nicholas Georgescu-Roegen: ‘matter matters’	50
D. The ‘ecologisation’ of environmental law and its methodological corollaries	62
E. Summary	67

Chapter 3 – Integrated waste management as the protagonist of integrated environmental law	71
A. Integrated waste management	71
B. The functions of waste law: a dichotomy	81
C. Waste: a legal creation	85
D. Waste prevention through product ecodesign	99
E. Summary	114
Chapter 4 – Indirect product design regulation: extended producer responsibility	117
A. EPR as incentive-based environmental policy: origins and rationale	117
B. Products covered by EPR	121
C. What does EPR stand for?	124
I. Extended producer responsibility	124
II. Extended producer responsibility	129
1. Who is the producer?	130
2. Producer, product or shared responsibility?	136
III. Extended producer responsibility	139
1. Physical responsibility	143
a) Physical responsibility in the EU	144
b) Physical responsibility in Brazil	147
c) Targets	149
2. Financial (and economic) responsibility	151
a) Financial responsibility in the EU	151
b) Financial responsibility in Brazil	155
3. Informational responsibility	159
D. Conjugating physical and financial responsibility	162
E. Implementing EPR: individual versus collective responsibility	167
F. Summary	176
Chapter 5 – Selected examples of direct ecodesign regulation in product-oriented environmental law	178
A. Direct ecodesign regulation in EU and Brazilian EPR legislation	178
I. EU EPR legislation	178
II. Brazilian EPR legislation	187

III. Appraisal	188
B. The EC Ecodesign Directive	189
I. Descriptive overview of the Ecodesign Directive	189
II. Discussion on the much-lauded potential of the Ecodesign Directive: is it the 'Super Directive'?	198
1. Standard setting and regulatory unambitiousness: does the Ecodesign Directive provide impetus to eco-innovation?	198
2. From energy efficiency to non-energy environmental aspects	203
a) Ecodesign performance requirements	204
aa) Implementing measures	204
bb) Self-regulatory measures	208
b) Ecodesign information requirements	211
aa) Implementing measures	211
bb) Self-regulatory measures	224
c) Appraisal	227
3. Methodological challenges	235
4. Regulatory context and legislative coordination: fine-tuning environmental legislation or simply shifting the burden?	238
5. Scope expansion	241
6. Room for national eco-design requirements?	243
7. Concluding remarks on the Ecodesign Directive	252
C. Product ban/phase-out and product composition: the case against plastic carrier bags and single-use plastic products in the EU and Brazil	254
I. The EU	254
II. Brazil	257
1. Environmental federalism and powers to legislate in Brazil	258
2. Plastic carrier bags	270
D. Excursus: the case of mobile phone chargers in the EU	279
E. Summary	282
CONCLUSION (THESES)	285
