

Contents

1	Introduction	1
2	Theoretical Basics	3
2.1	Dispersion Mechanisms in Biological Cells	3
2.2	Mathematical Formulations of Dispersion Processes	8
2.3	Permittivity Measurement Techniques	11
2.4	State-of-the-art Cell Measurements	13
3	Calibration Procedure Development	15
3.1	Equivalent Circuit Model	16
3.2	Calibration Concept	18
3.2.1	Basic Principle	18
3.2.2	Parasitic Inductance	19
3.2.3	Complex Characteristic Impedance	20
3.3	Open-Ended Coaxial Line (OEC) Sensor	21
3.4	Printed Circuit Board (PCB) Sensors	24
3.4.1	First Version up to 12 GHz	25
3.4.2	Second Version up to 20 GHz	27
3.4.3	Third Version up to 24 GHz	31
3.5	Microchip Sensor	34
3.5.1	Measurement Results	36
3.5.2	Cole-Cole Parameters Fitting	38
3.5.3	Uncertainty Analysis	38
4	Planar Sensors for Single Cell Measurements	41
4.1	Sensor Designs	42

4.2	Measurement Setup	46
4.3	CHO Measurements	47
4.4	HepG2 Measurements	53
4.5	Cole-Cole Parameter Extraction and Discussion	57
5	Guard Electrode Concept in Microwave Measurements	61
5.1	Basic Principle	62
5.2	Simulation Results	64
5.2.1	Sensor Without Guard Electrode	65
5.2.2	Sensor With a Guard Electrode	67
5.3	PCB Experiment	69
5.4	Microchip Implementation	72
5.5	Measurements With the Larger Sensor Version	75
5.6	Measurements With the Smaller Sensor Version	79
	Conclusion	81
	List of Abbreviations	83
	Bibliography	84
