

1	Introduction	1
1.1	Background and Motivation	1
1.2	Objectives and Approach	6
1.3	Structure	10
2	Background Information	13
2.1	Overview of AES	13
2.1.1	Principles and Mechanism	13
2.1.2	Origin and Development	15
2.2	Overall Status of AES in China	17
2.2.1	Initiation and Development	17
2.2.2	Relevant Programs	18
2.2.3	Characteristics and Challenges	21
2.3	Overview of Hydro-Economic Modelling	23
2.3.1	Hydro-Economic Modelling	23
2.3.2	Simulation and Optimization	24
3	Study Region Introduction	27
3.1	General Situation	27
3.1.1	Physical Environment, Location and Climate	27
3.1.2	Socio-Economic Structure	29
3.1.3	Crop Production	30
3.2	Soil and Water Conservation in the Watershed	33
3.2.1	Relevant Problems	33
3.2.2	Protection Policies	34

4	Overview of Integrated Hydro-Economic Modeling Approach	37
4.1	Overall Structure of Hydro-Economic Modelling	
	Procedure	37
4.2	Coordination and Cooperation of Components	40
4.2.1	Inter-Limitations Between Components	40
4.2.2	Spatial and Temporal Consistency	44
5	Identification of Mitigation Measures	47
5.1	Best Management Practices	47
5.1.1	Concept	47
5.1.2	History and Development	49
5.1.3	Classification	50
5.2	Identification Criteria	52
5.2.1	AES Design Suitability	52
5.2.2	Study Region Suitability	53
5.2.3	Applicability for Mitigation Effect Assessment	54
5.2.4	Applicability for Agri-Environmental Cost Estimation	55
5.3	Measures Identified	56
5.3.1	Structural Measures	57
5.3.2	Operational Measures	58
6	Mitigation Effect Assessment	61
6.1	Eco-Hydrological Model Identification	61
6.1.1	Features of Eco-Hydrological Models	61
6.1.2	Suitability	66
6.2	SWAT Overview	67
6.2.1	Development History	67
6.2.2	Spatial and Temporal Dimensions	69
6.2.3	Components	69
6.3	SWAT Setup	72
6.3.1	Data Preparation	72
6.3.2	Model Configuration	77
6.3.3	Calibration and Validation	81
6.4	Simulation of Identified Measures	88
6.4.1	General Strategy	88
6.4.2	Representation of Measures in SWAT	90
6.4.3	Results and Analysis	92

7	Agri-Economic Cost Assessment	101
7.1	Cost Categories in AES Programs	101
7.1.1	Cost for ESS Buyers	102
7.1.2	Cost for ESS Providers	103
7.2	Abatement Cost of Identified Measures	106
7.2.1	Cost Components for Each Measure	106
7.2.2	Average Annual Cost for Each Measure	107
7.2.3	Estimation Method of Cost Components	111
7.3	Cost Calculation and Result	115
7.3.1	Calculation Formula Development	115
7.3.2	Data Collection	123
7.3.3	Results and Analysis	129
8	Simulation and Optimization of AES	135
8.1	Simulation of AES	135
8.1.1	Assumption for Simulation	135
8.1.2	Principles of Simulation	136
8.1.3	Mitigation Effects and Compensation Payments of AES	140
8.2	Optimization of AES	141
8.2.1	Principles of Optimization	141
8.2.2	Overview of Simulated Annealing	142
8.3	Optimization Modelling Procedure	145
9	Results and Analysis	147
9.1	Scenarios of AES Design	147
9.2	Mitigation Targets of Single Pollutant	149
9.2.1	Sediments	149
9.2.2	Nitrogen	153
9.2.3	Phosphorus	157
9.3	Mitigation Targets of Nutrient Pollutants	160
9.3.1	Twelve Measures	161
9.3.2	Nine Measures	166
9.4	Mitigation Targets of Three Pollutants	170
9.4.1	Twelve Measures	171
9.4.2	Nine Measures	175
9.5	Relationship of Budget Size and Pollution Mitigation	179

10 Conclusion and Discussion	183
10.1 Summary	183
10.2 Limitations and Future Research	188
10.3 Policy Recommendations	191
Bibliography	195
