Preface	v
1 The governing equations	1
1.1 The Euler and mass conservation equations	3
1.2 The Navier–Stokes equation	4
1.3 Modelling the atmosphere	4
1.4 The rotating frame	5
1.5 Spherical coordinates and the geoid	6
1.5.1 Spherical coordinates	6
1.5.2 Modelling the geoid	8
2 Non-dimensionalisation and parameters	13
2.1 Non-dimensionalisation for oceanic flows	13
2.1.1 Ekman flow	17
2.1.2 Large gyres (inviscid)	18
2.1.3 Exact solutions (inviscid, spherical geometry)	19
2.2 Non-dimensionalisation for atmospheric flows	20
2.2.1 The background state	22
2.2.2 Perturbation generated by the ellipsoidal correction	23
2.2.3 The dynamics of the steady atmosphere	23
2.2.4 The dynamics of the unsteady atmosphere	24
2.3 The nature and validity of asymptotic expansions	25
3 Oceanic flows	29
3.1 Ekman flow	29
3.1.1 Constant viscosity	31
3.1.2 A variable viscosity	33
3.1.3 No vertical motion	35
3.1.4 Unsteady motion	37
3.2 Large gyres (inviscid)	39
3.2.1 Large gyres with constant vorticity	41
3.3 Large gyres as Ekman flows	44
3.4 Exact solutions (inviscid)	48
3.4.1 Azimuthal equatorial flows	48
3.4.2 The Antarctic Circumpolar Current (ACC)	50
3.5 Overview and comments	54

4	Steady atmospheric flows	57
4.1	The background state	57
4.2	The ellipsoidal-geoid correction	61
4.3	The steady dynamics: analysis and simplification	63
4.4	The middle regions of the atmosphere	68
4.5	The classical flows	69
4.5.1	Geostrophic balance	70
4.5.2	Ekman flow (spiral)	71
4.5.3	The thermal wind	73
4.6	Hadley, Ferrel and polar cells	74
4.7	The Walker circulation	84
4.8	Overview and comments	90
5	Unsteady atmospheric flows	93
5.1	The unsteady dynamics: general analysis and simplification	94
5.2	The Brunt–Väisälä frequency	96
5.3	Inviscid, unsteady motion	97
5.3.1	Solutions harmonic in time	98
	(a) Standing waves	100
	(b) A modulated travelling wave	100
	(c) Waves propagating along the Equator	101
	(d) Equatorially trapped waves	102
5.4	Two classical results revisited	104
5.4.1	Equatorial Kelvin waves	104
5.4.2	Rossby waves	105
	Case (1): No dependence on θ	106
	Case (2): Waves near the Equator	108
5.5	Viscous, unsteady motion	110
5.5.1	No forcing and harmonic in time	110
5.5.2	$M\rho_0$ constant with forcing	111
5.5.3	Forcing $F_1(\phi, \theta, \zeta, t)$ separable	111
5.6	Buoyancy waves	112
5.6.1	Background state	113
5.6.2	Wave perturbation	116
5.6.3	Inviscid waves	122
5.6.4	Waves with viscosity	125
5.7	Nonlinear wave propagation with application to the morning glory	126
5.7.1	Asymptotic structure of the equations	131
5.7.2	Morning glory (undular bore) solution	138
5.8	Overview and comments	146

Appendix: The ellipsoidal approximation of the Earth’s geoid 151
