Contents

Preface — V How to read this book? — XI Notations — XIII				
			1	Introduction —— 1
			1.1	The fully discrete case —— 1
1.2	Many to few: partitions —— 4			
1.3	Optimal transport in a nutshell —— 6			
1.3.1	Unbalanced transport —— 9			
1.4	Vector-valued transport and multipartitions —— 10			
1.5	Cooperative and non-cooperative partitions —— 13			
Part I	: Stable marriage and optimal partitions			
2	The stable marriage problem —— 17			
2.1	Marriage without sharing —— 17			
2.1.1	Gale-Shapley algorithm —— 18			
2.2	Where money comes in —— 19			
2.3	Marriage under sharing —— 20			
2.4	General case —— 21			
2.5	Stability by fake promises —— 23			
2.6	The discrete Monge problem —— 27			
3	Many to few: stable partitions —— 31			
3.1	A non-transferable partition problem —— 31			
3.1.1	The Gale-Shapley algorithm for partitions —— 33			
3.2	Transferable utilities —— 34			
4	Monge partitions —— 39			

Capacities --- 39

First paradigm: the big brother ---- 41

Second paradigm: free market --- 42

Weak definition of partitions — 47

Birkhoff theorem ---- 51

Summery and beyond ---- 53

The big brother meets the free market — 43

All the ways lead to stable subpartitions — 46

Kantorovich relaxation of (sub)partitions --- 49

4.1

4.2

4.3

4.4

4.5

4.6 4.6.1

4.6.2

4.7

Part II: Multipartitions

5	Weak multipartitions — 57
5.1	Multipartitions — 57
5.2	Feasibility conditions —— 59
5.2.1	Dual representation of weak (sub)partitions —— 59
5.2.2	Proof of Theorem 5.1 —— 61
5.3	Dominance —— 64
5.3.1	Minimal elements —— 68
6	Strong multipartitions —— 71
6.1	Strong partitions as extreme points —— 71
6.2	Structure of the feasibility sets — 72
6.2.1	Coalitions and cartels — 73
6.2.2	Fixed exchange ratio —— 75
6.2.3	Proofs — 76
6.2.4	An application: two states for two nations —— 80
6.3	Further comments —— 81
7	Optimal multipartitions —— 83
7.1	Optimality within the weak partitions —— 83
7.1.1	Extension to hyperplane —— 83
7.1.2	Optimal multi(sub)partitions: extended setting — 87
7.1.3	Price adaptation and escalation —— 91
7.2	Optimal strong multipartitions —— 94
7.2.1	Example of escalation —— 95
7.2.2	Uniqueness for a prescribed capacity —— 96
7.2.3	Uniqueness within the feasibility domain —— 99
7.2.4	The MinMax theorem: a unified formulation —— 100
8	Applications to learning theory —— 103
8.1	Maximal likelihood of a classifier —— 103
8.2	Information bottleneck —— 106
8.2.1	Minimizing the distortion —— 108
8.2.2	The information bottleneck in the dual space —— 110
Part II	I: From optimal partition to optimal transport and back
9	Optimal transport for scalar measures —— 117
9.1	General setting —— 117
9.2	Duality —— 118

9.3	Deterministic transport —— 121
9.3.1	Solvability of the dual problem —— 123
9.4	Metrics on the set of probability measures —— 125
9.4.1	Special cases —— 126
9.4.2	McCann interpolation —— 128
10	Interpolated costs —— 131
10.1	Introduction —— 131
10.1.1	Semi-finite approximation: the middle way —— 132
10.2	Optimal congruent partitions —— 133
10.3	Strong partitions —— 136
10.4	Pricing in hedonic market —— 138
10.5	Dependence on the sampling set —— 139
10.5.1	Monotone improvement —— 139
10.5.2	Asymptotic estimates —— 140
10.6	Symmetric transport and congruent multi-partitions —— 143
Part I\	: Cooperative and non-cooperative partitions
11	Back to Monge: individual values —— 149
11.1	ine individual surplus values —— 154
11.1 11.2	The individual surplus values —— 154 Will wiser experts always get higher values? —— 157
11.1 11.2 11.2.1	Will wiser experts always get higher values? —— 157 Proofs —— 160
11.2	Will wiser experts always get higher values? —— 157
11.2 11.2.1	Will wiser experts always get higher values? —— 157 Proofs —— 160
11.2 11.2.1 12	Will wiser experts always get higher values? —— 157 Proofs —— 160 Sharing the individual value —— 167
11.2 11.2.1 12 12.1	Will wiser experts always get higher values? —— 157 Proofs —— 160 Sharing the individual value —— 167 Maximizing the agent's profit —— 169
11.2 11.2.1 12 12.1 12.2	Will wiser experts always get higher values? —— 157 Proofs —— 160 Sharing the individual value —— 167 Maximizing the agent's profit —— 169 Several agents: Nash equilibrium —— 170
11.2 11.2.1 12 12.1 12.2 12.3	Will wiser experts always get higher values? —— 157 Proofs —— 160 Sharing the individual value —— 167 Maximizing the agent's profit —— 169 Several agents: Nash equilibrium —— 170 Existence of Nash equilibrium —— 171
11.2 11.2.1 12 12.1 12.2 12.3 12.4	Will wiser experts always get higher values? —— 157 Proofs —— 160 Sharing the individual value —— 167 Maximizing the agent's profit —— 169 Several agents: Nash equilibrium —— 170 Existence of Nash equilibrium —— 171 Efficiency —— 171
11.2 11.2.1 12 12.1 12.2 12.3 12.4 12.4.1	Will wiser experts always get higher values? — 157 Proofs — 160 Sharing the individual value — 167 Maximizing the agent's profit — 169 Several agents: Nash equilibrium — 170 Existence of Nash equilibrium — 171 Efficiency — 171 Efficiency for agents of comparable utilities — 173
11.2 11.2.1 12 12.1 12.2 12.3 12.4 12.4.1 12.4.2	Will wiser experts always get higher values? — 157 Proofs — 160 Sharing the individual value — 167 Maximizing the agent's profit — 169 Several agents: Nash equilibrium — 170 Existence of Nash equilibrium — 171 Efficiency — 171 Efficiency for agents of comparable utilities — 173 Efficiency under commission strategy — 174
11.2 11.2.1 12 12.1 12.2 12.3 12.4 12.4.1 12.4.2 12.5 12.5.1	Will wiser experts always get higher values? — 157 Proofs — 160 Sharing the individual value — 167 Maximizing the agent's profit — 169 Several agents: Nash equilibrium — 170 Existence of Nash equilibrium — 171 Efficiency — 171 Efficiency for agents of comparable utilities — 173 Efficiency under commission strategy — 174 Free price strategy — 175 Where Nash equilibrium meets efficiency — 176 Cooperative partitions — 177
11.2 11.2.1 12 12.1 12.2 12.3 12.4 12.4.1 12.4.2 12.5 12.5.1	Will wiser experts always get higher values? — 157 Proofs — 160 Sharing the individual value — 167 Maximizing the agent's profit — 169 Several agents: Nash equilibrium — 170 Existence of Nash equilibrium — 171 Efficiency — 171 Efficiency for agents of comparable utilities — 173 Efficiency under commission strategy — 174 Free price strategy — 175 Where Nash equilibrium meets efficiency — 176 Cooperative partitions — 177 Free price strategy — 177
11.2 11.2.1 12 12.1 12.2 12.3 12.4 12.4.1 12.4.2 12.5 12.5.1 13.1 13.2	Will wiser experts always get higher values? — 157 Proofs — 160 Sharing the individual value — 167 Maximizing the agent's profit — 169 Several agents: Nash equilibrium — 170 Existence of Nash equilibrium — 171 Efficiency — 171 Efficiency for agents of comparable utilities — 173 Efficiency under commission strategy — 174 Free price strategy — 175 Where Nash equilibrium meets efficiency — 176 Cooperative partitions — 177 Free price strategy — 177 Cooperative games — a crash review — 178
11.2 11.2.1 12 12.1 12.2 12.3 12.4 12.4.1 12.4.2 12.5 12.5.1 13 13.1 13.2 13.2,1	Will wiser experts always get higher values? — 157 Proofs — 160 Sharing the individual value — 167 Maximizing the agent's profit — 169 Several agents: Nash equilibrium — 170 Existence of Nash equilibrium — 171 Efficiency — 171 Efficiency for agents of comparable utilities — 173 Efficiency under commission strategy — 174 Free price strategy — 175 Where Nash equilibrium meets efficiency — 176 Cooperative partitions — 177 Free price strategy — 177 Cooperative games — a crash review — 178 Convex games — 180
11.2 11.2.1 12.1 12.2 12.3 12.4 12.4.1 12.4.2 12.5 12.5.1 13.1 13.2 13.2.1 13.3	Will wiser experts always get higher values? — 157 Proofs — 160 Sharing the individual value — 167 Maximizing the agent's profit — 169 Several agents: Nash equilibrium — 170 Existence of Nash equilibrium — 171 Efficiency — 171 Efficiency for agents of comparable utilities — 173 Efficiency under commission strategy — 174 Free price strategy — 175 Where Nash equilibrium meets efficiency — 176 Cooperative partitions — 177 Free price strategy — 177 Cooperative games — a crash review — 178 Convex games — 180 Back to cooperative partition games — 182
11.2 11.2.1 12 12.1 12.2 12.3 12.4 12.4.1 12.4.2 12.5 12.5.1 13 13.1 13.2 13.2,1	Will wiser experts always get higher values? — 157 Proofs — 160 Sharing the individual value — 167 Maximizing the agent's profit — 169 Several agents: Nash equilibrium — 170 Existence of Nash equilibrium — 171 Efficiency — 171 Efficiency for agents of comparable utilities — 173 Efficiency under commission strategy — 174 Free price strategy — 175 Where Nash equilibrium meets efficiency — 176 Cooperative partitions — 177 Free price strategy — 177 Cooperative games — a crash review — 178 Convex games — 180

X — Contents

A	Convexity —— 189
A.1	Convex sets —— 189
A.2	Convex functions —— 190
A.3	Lower semi-continuity —— 192
A.4	Legendre transformation —— 193
A.5	Subgradients —— 194
A.6	Support functions —— 195
В	Convergence of measures —— 197
B.1	Total variation —— 197
B.2	Strong convergence —— 198
B.3	Weak* convergence —— 199
Biblio	graphy —— 203

Bibliography —— 203

Index ---- 207
