Contents

Preface — V

Introduction: economics with memory — XIX

Part I: Concept of memory

1 Concept of memory in economics — 3
1.1 Introduction — 3
1.2 Definition of memory — 4
1.3 General principles of memory — 7
1.3.1 Principle of causality in time domain — 7
1.3.2 Principle of nonlocality in time — 9
1.3.3 Principle of linear superposition — 11
1.3.4 Principle of memory fading — 12
1.3.5 Monotonous memory fading and significant events — 15
1.3.6 Principle of nonaging memory — 15
1.3.7 Changing type of behavior at infinity — 17
1.3.8 Principle of memory reversibility — 19
1.4 Examples of memory and nonlocality in time — 20
1.4.1 Absence of memory: total amnesia and instant amnesia — 20
1.4.2 Distributed lag or memory — 21
1.4.3 Memory with power-law fading — 24
1.4.4 Memory with multiparameter power-law fading — 28
1.4.5 Memory with variable fading — 29
1.4.6 Complete (perfect, ideal) memory — 29
1.4.7 Memory with generalized power-law fading — 30
1.4.8 Memory with distributed fading — 33
1.5 Memory in economics: discrete time approach — 36
1.5.1 Long memory in discrete time approach — 36
1.5.2 Definition of process with memory for discrete time — 39
1.5.3 Granger–Joyeux fractional differencing — 41
1.5.4 Continuous limit of fractional differencing — 43
1.5.5 Power-law memory and exact fractional differences — 44
1.5.6 Definition of exact fractional differences — 46
1.6 Methods of describing processes with memory — 47
1.6.1 Integral equations and integro-differential equations — 47
1.6.2 Mathematical statistics and time series analysis — 48
1.6.3 Fractional calculus — 50
1.7 Conclusion — 52

Part II: Concepts of economics with memory

2 Concepts of marginal values with memory — 55
2.1 Introduction — 55
2.2 Economic behavior of consumers and presence of memory — 55
2.3 Consumer behavior, utility and memory effect — 58
2.4 Standard average and marginal values and ambiguity — 61
2.5 Ambiguity and memory effects — 64
2.6 Caputo fractional derivative and its properties — 65
2.7 Generalization of concepts of average and marginal values — 67
2.7.1 One-parameter marginal values with memory — 67
2.7.2 Two-parameter marginal values with memory — 69
2.7.3 General marginal values through parametric derivative — 70
2.8 Examples of calculations of generalized marginal values — 71
2.9 Conclusion — 74

3 Marginal values of noninteger order in economic analysis — 76
3.1 Introduction — 76
3.2 Standard marginal value in economic analysis — 77
3.3 Concept of marginal value of noninteger order — 78
3.4 Example of calculating of generalized marginal values — 82
3.5 From marginal value of noninteger order to total value — 84
3.6 Conclusion — 86

4 Deterministic factor analysis of processes with memory — 87
4.1 Introduction — 87
4.2 Differential method of noninteger order: single variable — 89
4.3 Differential method of noninteger order: two variables — 92
4.4 Comparison with standard differential method — 93
4.5 Integral method of arbitrary (noninteger) order — 97
4.6 Conclusion — 100

5 Elasticity for processes with memory — 101
5.1 Introduction — 101
5.2 Concept of elasticity with memory — 103
5.3 Properties of elasticity with memory — 107
5.4 Elasticity through marginal value with memory — 109
5.5 Generalized marginal rate of substitution with memory — 111
5.6 Nonlocal elasticity of noninteger order — 112
5.7 Examples of calculations of elasticities with memory — 117
5.8 Conclusion — 120

6 Multiplier for processes with memory — 122
6.1 Introduction — 122
6.2 Concept of standard multiplier — 122
6.3 Consumption and investment multipliers — 124
6.4 Multiplier effect and memory — 124
6.5 Lag effects and memory effect — 125
6.6 Concept of multiplier: from lag to memory — 127
6.7 Generalized multiplier with memory — 129
6.8 Multiplier with fading memory — 130
6.9 Multiplier with nonaging memory — 131
6.10 Multiplier with power-law memory — 132
6.11 Multiplier with distributed time scaling — 135
6.12 Superposition principle for multipliers with memory — 136
6.13 Multiplier with distributed power-law memory — 138
6.14 Multiplier with uniform distributed memory fading — 139
6.15 Sequential action of multipliers with memory — 141
6.16 Principles of permutability of multipliers with memory — 145
6.17 Conclusion — 146

7 Accelerator for processes with memory — 147
7.1 Introduction — 147
7.2 Concept of standard accelerator — 147
7.3 Effect of financial accelerator — 149
7.4 Generalized accelerator with memory — 150
7.5 Accelerator with power-law memory — 153
7.6 Accelerator with simplest power-law memory — 155
7.7 Accelerator with distributed time scaling — 158
7.8 Accelerator with distributed memory fading — 160
7.9 Superposition principle for accelerators with memory — 163
7.10 Sequential actions of accelerators with memory — 165
7.11 Superposition of accelerators with and without memory — 167
7.12 Accelerator with memory through standard accelerators — 168
7.13 Chain rule and product rule for accelerator with memory — 170
7.14 Conclusion — 171

8 Duality of multipliers and accelerators with memory — 172
8.1 General duality principle — 172
8.2 Duality principle for simple power-law memory — 176
8.2.1 From multiplier with memory to accelerator with memory — 176
8.2.2 From accelerator with memory to multiplier with memory — 177
8.2.3 Formulation of duality for simple power-law memory — 179
8.3 Principle of decreasing of fading for multiplier with memory — 180

8.4 Examples of duality — 182
8.4.1 Second duality for simplest power-law memory — 182
8.4.2 Duality for memory and parametric fractional derivative — 184
8.4.3 Duality for distributed time scaling — 184
8.4.4 Duality for distributed memory fading — 187
8.5 Conclusion — 190

Part III: Linear models of economics with memory

9 Model of natural growth with memory — 193
9.1 Introduction — 193
9.2 Model of natural growth without memory — 193
9.3 Memory effects by fractional derivatives and integrals — 195
9.4 Equation of natural growth with memory and its solution — 198
9.5 Some features of natural growth with memory — 199
9.6 Conclusions — 204

10 Model of growth with constant pace and memory — 206
10.1 Introduction — 206
10.2 Standard model of growth with constant pace — 206
10.3 Growth model with constant price and memory — 208
10.4 Growth model with power-law price and memory — 209
10.5 Growth model with two-parameter memory — 210
10.6 Simple model of price dynamics with memory — 212
10.7 Simple model of fixed assets dynamics with memory — 213
10.8 Conclusion — 214

11 Harrod–Domar growth model with memory — 215
11.1 Introduction — 215
11.2 Harrod–Domar growth model without memory — 216
11.3 Harrod–Domar growth model with power-law memory — 219
11.4 General solution of model equation — 220
11.5 Closed model with memory: rate of growth with memory — 222
11.6 Open model with memory and power-law consumption — 225
11.7 Model with memory and constant consumption — 228
11.8 Examples of memory effects for growth model — 231
11.9 Model with multiparameter memory — 236
11.10 Two-parameter power-law memory — 236
11.11 Open model with two-parameter memory — 238
11.12 Model with multiparameter power-law memory — 239
11.13 Conclusion — 240

12 Dynamic intersectoral Leontief models with memory — 242
12.1 Introduction — 242
12.2 Dynamic intersectoral model without memory — 243
12.3 Dynamic intersectoral model with power-law memory — 247
12.4 Closed dynamic intersectoral model with memory — 250
12.5 Open dynamic intersectoral model with memory — 256
12.6 Dynamic intersectoral model with sectoral memory — 257
12.7 First example of two-sectoral model with memory — 262
12.8 Second example of two-sectoral model with memory — 266
12.9 Third example of two-sectoral model with memory — 268
12.10 Conclusion — 271

13 Market price dynamics with memory effects — 272
13.1 Introduction — 272
13.2 Standard Evans model of price dynamics in market — 272
13.3 Accounting for memory of excess of demand over supply — 276
13.4 Evans model with memory: equation and solution — 280
13.5 Price dynamics with memory: amplification of market price — 283
13.6 Price dynamics with memory: oscillation of market price — 286
13.7 Properties of relaxation with memory to equilibrium price — 288
13.8 Comparison of characteristic times for price dynamics — 290
13.9 Comparison of relaxation and oscillation damping of price — 291
13.10 Conclusion — 297

14 Cagan model of inflation with memory — 298
14.1 Introduction — 298
14.2 Standard Cagan model without memory — 299
14.3 Generalization: Cagan model with memory — 302
14.4 Solution for equation of Cagan model with memory — 306
14.5 Short-term behavior of expected inflation with memory — 308
14.6 Long-term behavior of expected inflation with memory — 310
14.7 Properties of behavior of expected inflation with memory — 311
14.8 Conclusion — 312

Part IV: **Nonlinear models of economics with memory**

15 Model of logistic growth with memory — 315
15.1 Introduction — 315
15.2 Logistic growth model without memory — 315
15.3 Logistic growth model with memory — 317
15.4 Logistic growth with memory — 320

15.5 Conclusion — 323

16 Kaldor-type model of business cycles with memory — 325
16.1 Introduction — 325
16.2 Kaldor-type model of business cycles without memory — 325
16.3 Kaldor-type model of business cycles with memory — 327
16.4 Conclusion — 330

17 Solow models with power-law memory — 331
17.1 Introduction — 331
17.2 Solow–Swan model with memory — 332
17.2.1 Standard Solow–Swan model with continuous time — 333
17.2.2 Generalization of Solow–Swan model — 335
17.3 Solow model of long-run growth with memory — 337
17.3.1 Long-run growth without memory and capital depreciation — 337
17.3.2 Long-run growth with power-law memory — 340
17.3.3 Rate of growth with power-law memory — 343
17.3.4 Dynamics of capital per unit of effective labor — 345
17.4 Solow–Lucas model of closed economy with memory — 347
17.4.1 Solow–Lucas model for closed economy without memory — 347
17.4.2 Solow–Lucas model for closed economy with memory — 348
17.4.3 Growth rates of closed economy with memory — 350
17.5 Conclusion — 353

18 Lucas model of learning with memory — 354
18.1 Introduction — 354
18.2 Standard Lucas model of learning without memory — 355
18.3 Generalized Lucas model of learning with memory — 356
18.4 Cumulative experience: growth with power-law memory — 359
18.5 Productivity growth with memory — 361
18.6 Conclusion — 363

19 Self-organization of processes with memory — 364
19.1 Introduction — 364
19.2 Nonlinear equations of processes with power-law memory — 365
19.3 Slaving principle of self-organization with memory — 367
19.4 Variable exception without using the adiabatic method — 372
19.5 Adiabatic exclusion of variable for rapid damping — 373
19.6 Significant changes of characteristic times by memory — 375
19.7 Self-organization by memory toward logistic growth — 377
19.8 Conclusion — 381

Part V: Advanced models: distributed lag and memory

20 Multipliers and accelerators with lag and memory — 385
20.1 Introduction — 385
20.2 General multipliers and accelerators with distributed lag — 386
20.3 Accelerator with uniformly distributed lag — 387
20.4 Multiplier and accelerator with exponential lag — 390
20.5 General multipliers with distributed lag and memory — 392
20.6 General accelerator with distributed lag and memory — 395
20.7 Multiplier with gamma distributed lag and memory — 396
20.8 Multiplier with memory through Abel-type operator — 398
20.9 Accelerators with gamma distributed lag and memory — 402
20.10 Exponentially distributed lag and power-law memory — 404
20.11 Conclusion — 407

21 Harrod–Domar model with memory and distributed lag — 408
21.1 Introduction — 408
21.2 Harrod–Domar growth model without memory and lag — 408
21.3 Harrod–Domar growth model with memory — 410
21.4 Equation for growth with memory and lag — 412
21.5 Conclusion — 417

22 Dynamic Keynesian model with memory and lag — 419
22.1 Introduction — 419
22.2 Standard dynamic Keynesian model — 420
22.3 Dynamic Keynesian model with memory — 422
22.4 Equation of Keynesian model with memory and lag — 424
22.5 Asymptotic behavior of growth with memory and lag — 427
22.6 Conclusion — 428

23 Phillips model with distributed lag and memory — 430
23.1 Introduction — 430
23.2 Phillips model with power-law memory and without lag — 431
23.3 Phillips model with distributed lag and memory — 435
23.4 Conclusion — 437

Part VI: Advanced models: discrete time approach

24 Discrete accelerator with memory — 441
24.1 Introduction — 441
24.2 Standard accelerator in continuous and discrete terms — 441

24.3 Capital stock adjustment principle — 442
24.4 Connection of discrete and continuous time terms — 443
24.5 Continuous-time accelerator with power-law memory — 445
24.6 Discrete-time accelerator with power-law memory — 447
24.7 Conclusion — 449

25 Comparison of discrete and continuous accelerators — 450
25.1 Introduction — 450
25.2 Comparison of accelerator without memory — 451
25.3 Harrod–Domar growth models: continuous and discrete — 453
25.3.1 Continuous time approach — 453
25.3.2 Discrete time approach — 454
25.3.3 Comparison of discrete and continuous models — 456
25.4 Concept of exact discretization — 456
25.5 Exact discrete accelerator and multiplier without memory — 458
25.6 Comparison of standard and exact discrete models — 461
25.7 Conclusion — 463

26 Exact discrete accelerator and multiplier with memory — 465
26.1 Introduction — 465
26.2 Continuous-time accelerator and multiplier with memory — 466
26.3 Standard discrete time approach to memory in economics — 470
26.4 Exact discrete accelerator and multiplier with memory — 471
26.5 Conclusion — 473

27 Logistic map with memory from economic model — 474
27.1 Introduction — 474
27.2 Logistic growth with memory and periodic kicks — 474
27.3 Economic and logistic laps with memory — 476
27.4 Generalized economic and logistic maps with memory — 480
27.5 Conclusion — 485

Part VII: **Advanced models: generalized memory**

28 Economics model with generalized memory — 491
28.1 Introduction — 491
28.2 Generalized multiplier and accelerator with memory — 492
28.3 Generalized Taylor series for memory function — 495
28.4 Multiplier with memory of TRB type — 497
28.5 Accelerator with memory of TRB type — 499
28.6 Harrod–Domar growth model with memory of TRB type — 502

28.7 Lucas model of learning with memory of TRB type — 509
28.8 Memory function of Prabhakar type — 511
28.9 Model of learning with memory of Prabhakar type — 515
28.10 Conclusion — 519

Part VIII: **Instead of conclusion**

29 Fractional calculus in economics and finance — 523
29.1 ARFIMA approach — 523
29.2 Fractional Brownian motion approach — 524
29.3 Econophysics approach — 525
29.4 Deterministic chaos approach — 526
29.5 Economics with memory — 527
29.6 Conclusion — 530

30 Future directions of economics with memory — 532
30.1 Self-organization in economics with memory — 532
30.2 Simultaneous action of distributed lag and fading memory — 532
30.3 Memory with distributed fading — 533
30.4 Generalized fractional calculus in economics — 534
30.5 General fractional calculus and memory — 535
30.6 Fractional variational calculus in economics with memory — 536
30.7 Fractional differential games in economics with memory — 536
30.8 Economic data and modeling of economics with memory — 536
30.9 Big data and memory — 537
30.10 Numerical methods for economics with memory — 537
30.11 Econometrics for processes with memory — 538
30.12 Development concept of memory — 539
30.13 Conclusion — 539

Bibliography — 541

Index — 571
