Preface — V

About the Author — XIII

Chapter 1

Introduction — 1

References — 3

Chapter 2

Polymers – fundamental — 4

- 2.1 Classification — 4
 - 2.1.1 Chemical nature of monomers — 4
 - 2.1.2 Molecular structure of polymers — 5
 - 2.1.3 Chain architecture — 5
 - 2.1.4 Polymer isomerism — 5
 - 2.1.5 Type of polymerization process — 5
 - 2.2 Other classification — 6
 - 2.3 Types of polymer — 6
 - 2.4 Polymer properties — 7
 - 2.4.1 Structural units — 8
 - 2.4.2 Polymer structure — 8
 - 2.4.3 Molecular weight — 9
 - 2.4.4 Degree of polymerization — 10
 - 2.4.5 Mechanical properties — 11
 - 2.5 Polymerization — 11
 - 2.5.1 Chain or addition polymerization — 12
 - 2.5.2 Step-growth polymerization — 13
 - 2.6 Polymer synthesis — 14
 - 2.6.1 Polymer modification — 15
 - 2.7 Copolymers — 15
 - 2.7.1 Block copolymer — 15
 - 2.7.2 Graft copolymer — 16
 - 2.8 Polymerization processes — 16
 - 2.8.1 Bulk polymerization — 16
 - 2.8.2 Solution polymerization — 17
 - 2.8.3 Suspension polymerization — 18
 - 2.8.4 Emulsion polymerization — 19
 - 2.8.5 Summary — 21
- References — 22

Chapter 3

Electroactive polymers — 28

- 3.1 Properties of electroactive polymers — 28
- 3.2 Conventional materials – shortcomings — 28
- 3.3 Classification — 29
 - 3.3.1 Ionic EAPs — 29
 - 3.3.2 Field-activated electroactive polymers — 29
- 3.4 Group of electroactive polymers — 30
 - 3.4.1 Piezoelectric polymers — 30
 - 3.4.2 Ferroelectric polymers — 31
 - 3.4.3 Electrostrictive polymers — 32
- 3.5 Conducting polymers — 33
 - 3.5.1 Electroactivity — 33
- 3.6 Polymer molecular engineering — 34
 - 3.6.1 Mechanical behavior — 35
 - 3.6.2 Viscoelastic behavior — 35
 - 3.6.3 Maxwell's stress — 36
 - 3.6.4 Maxwell's stress effect — 37
 - 3.6.5 Mechanical strain — 38
 - 3.6.6 Mechanical energy density — 38
 - 3.6.7 Electrostriction — 39
 - 3.6.8 Electromechanical actuation mechanism — 39
 - 3.6.9 Transducers — 41
 - 3.6.10 Dielectric relaxation — 41
- 3.7 Polyaniline (PANI) — 41
- 3.8 Heterocyclic polymers — 44
 - 3.8.1 Polypyrrole (PPy) — 44
 - 3.8.2 Polythiophene (PT) — 46
- 3.9 Ionic polymer–metal composites (IPMCs) — 47
- 3.10 Carbon nanotubes (CNTs) — 49
- 3.11 Ionic gels (IGs) — 50
- 3.12 Dielectric elastomer (DE) — 51
 - 3.12.1 Polyvinylidene fluoride (PVDF) — 51
- 3.13 Elastomers — 54
 - 3.13.1 Silicone elastomers — 54
 - 3.13.2 Acrylic elastomers — 55
- 3.14 Copolymers and terpolymers — 56
 - 3.14.1 Poly(vinylidene fluoride–trifluoroethylene) (P(VDF–TrFE)) — 57
 - 3.14.2 Electron-irradiated P(VDF–TrFE) — 58
 - 3.14.3 Poly(vinylidene fluoride–trifluoroethylene–chlorofluoroethylene) terpolymer — 59
- 3.15 Nylon 11 (poly- ω -aminoundecanoyl) — 59

- 3.16 Polyurethane — 60
- 3.17 Liquid crystal elastomers (LCEs) — 62
- 3.18 Summary — 63
- References — 63

Chapter 4

Electroactive polymers – synthesis — 73

- 4.1 Methods of synthesis — 73
- 4.2 Oxidative polymerization — 74
 - 4.2.1 Mechanism of oxidative polymerization — 74
 - 4.2.2 Oxidants — 75
- 4.3 Electrochemical polymerization — 75
 - 4.3.1 Mechanism of electrochemical polymerization — 76
 - 4.3.2 Factors that influence electrochemical polymerization — 77
 - 4.3.3 Electrochemical techniques — 77
 - 4.3.4 Working electrode substrate — 78
 - 4.3.5 Electrolytes — 78
 - 4.3.6 Advantages — 79
 - 4.3.7 Shortcomings — 79
- 4.4 Conducting polymers — 79
 - 4.4.1 Effect of temperature — 82
- 4.5 Polyaniline — 82
 - 4.5.1 Mechanism – polyaniline polymerization — 86
 - 4.5.2 Separation and purification of PANI — 87
 - 4.5.3 PANI synthesis – emulsion polymerization — 88
- 4.6 Polypyrrole — 88
 - 4.6.1 Mechanism – polypyrrole polymerization — 90
- 4.7 Polythiophene — 93
 - 4.7.1 Mechanism – polythiophene polymerization — 94
- 4.8 Synthesis of P(VDF-TrFE-CTFE) terpolymer — 96
 - 4.8.1 Direct terpolymerization — 96
 - 4.8.2 Bulk polymerization — 97
- 4.9 Reduction of chlorine atom — 97
- 4.10 Irradiation of poly(vinylidene fluoride–trifluoroethylene) — 98
- 4.11 Polyurethane — 98
 - 4.11.1 Prepolymer and polymer synthesis — 99
- 4.12 Synthesis of acrylate polymers — 100
- 4.13 Synthesis of gels — 101
- 4.14 Carbon nanotubes — 101
- 4.15 Synthesis of nanocomposites — 103
 - 4.15.1 Template synthesis — 103
 - 4.15.2 Intercalation of polymer or prepolymer from solution — 104

- 4.15.3 In situ intercalative polymerization — 104
- 4.15.4 Melt intercalation — 104
- 4.16 Summary — 105
- References — 107

Chapter 5

Blends and composites of EAP — 115

- 5.1 Materials versus blends — 115
- 5.2 Polymer blends — 116
- 5.3 Polymer composites — 117
- 5.3.1 Electroactive blends and composites — 118
- 5.4 Conducting polymers — 118
- 5.5 Polyaniline — 119
- 5.6 Fluoropolymers — 119
- 5.7 Silicone elastomer — 120
- 5.8 Acrylic elastomer blends — 121
- 5.9 Ionic polymer metal composites — 121
- 5.10 Hybrid electroactive materials — 122
- 5.11 Fillers and composites — 122
- 5.12 Conductive fillers — 123
- 5.12.1 Metal oxides — 123
- 5.12.2 Carbon nanotubes — 124
- 5.13 Functional fillers — 125
- 5.13.1 Graphene — 125
- 5.13.2 Titanium dioxide (TiO₂) — 125
- 5.14 Nanocomposites — 126
- 5.15 Liquid crystal elastomers — 127
- 5.16 Viscoelastic elastomers — 128
- 5.17 Summary — 128
- References — 129

Chapter 6

Characterization of EAPs — 135

- 6.1 Characterization of EAPs — 135
- 6.2 Sample preparation — 135
- 6.3 Elemental analysis — 136
- 6.4 Viscosity measurement — 136
- 6.5 Thermogravimetry — 137
- 6.6 Differential scanning calorimetry — 139
- 6.7 Scanning electron microscopy — 139
- 6.8 X-ray diffraction — 141
- 6.9 Fourier-transform infrared spectroscopy — 142

- 6.10 Fourier Raman spectroscopy — 144
- 6.11 Nuclear magnetic resonance spectra — 145
- 6.12 ^1H NMR spectra of polyurethane — 146
- 6.13 ^{13}C NMR – nuclear magnetic resonance spectroscopy — 146
- 6.14 Electron spin resonance — 147
- 6.15 Cyclovoltammogram — 148
- 6.16 X-ray diffraction — 149
- 6.17 Chronoamperometric curves — 150
- 6.18 Bending deformation — 152
- 6.19 Summary — 152
References — 153

Chapter 7

Electroactive polymers – applications — 156

- 7.1 Biomedical applications — 156
- 7.2 Tissue engineering — 156
- 7.3 Biomedicine — 157
- 7.4 Drug delivery — 157
- 7.5 Biosensors — 158
- 7.6 Biomaterials — 160
- 7.7 Microfluidic devices — 160
- 7.8 Biomimetics — 161
- 7.9 Robotic applications — 162
- 7.10 Biomimetic robotics — 162
- 7.11 Artificial muscles — 162
- 7.12 Soft robotics — 163
- 7.13 Chemical sensors — 164
- 7.14 Energy-harvesting systems — 164
- 7.15 Space applications — 165
- 7.16 Space and planets exploration — 166
- 7.17 Catheters or guide wires — 166
- 7.18 Energy storage applications — 166
- 7.19 Secondary batteries — 167
- 7.20 Microdevice — 167
- 7.21 Bistable displays — 168
- 7.22 MEMS devices — 168
- 7.23 Electrochemical capacitors — 168
- 7.24 Summary — 169
References — 170

Chapter 8

Electroactive polymers – challenges — 176

- 8.1 Requirements — 176
- 8.2 Developments — 177
- 8.3 Shortcomings — 178
- 8.4 Challenges — 178
 - 8.4.1 Materials — 178
 - 8.4.2 Properties — 179
 - 8.4.3 Technology — 180
 - 8.4.4 Applications — 180
- 8.5 Summary — 181
- References — 181

Chapter 9

Present trends — 183

- 9.1 Ionic EAP — 183
- 9.2 Electronic EAP — 184
- 9.3 Shortcomings — 184
- 9.4 Present status — 185
- 9.5 Remarks — 185
- References — 186

Chapter 10

Future trends — 187

- 10.1 Objectives — 187
- 10.2 Future challenges — 188
- 10.3 Electroactive polymers in future — 189
- 10.4 Conclusion — 190
- References — 191

Index — 193
