Foreword — V

1 Introduction to dynamical systems — 1

- 1.1 Determinism and the notion of state — 1
 - 1.1.1 Red thread example — 2
 - 1.1.2 Dynamics of state variables — 3
 - 1.1.3 Application to the pendulum — 6
- 1.2 Geometrical description of the dynamics — 7
 - 1.2.1 Velocity vector field — 7
 - 1.2.2 Flow and trajectory — 10
 - 1.2.3 Fixed points — 12
 - 1.2.4 Boundedness, fixed points, and recurrences — 13
 - 1.2.5 Conservative vs. dissipative systems — 14
 - 1.2.6 Attractors — 17
- 1.3 Dynamics and phase space dimension — 17
 - 1.3.1 One-dimensional dynamics — 17
 - 1.3.2 Two-dimensional dynamics — 19
 - 1.3.3 Dynamics in dimension three and higher — 25
- 1.4 Dimensionality reduction and discrete-time dynamical systems — 27
 - 1.4.1 Poincaré section — 28
 - 1.4.2 Recurrence systems — 30
- 1.5 Conclusions — 33

2 Stability analysis — 41

- 2.1 Bidimensional phase space — 41
 - 2.1.1 Jacobian matrix — 41
 - 2.1.2 Two distinct and nonzero real roots — 42
 - 2.1.3 Two complex conjugate roots — 43
 - 2.1.4 Double root different from zero — 45
 - 2.1.5 Phase diagram in terms of the trace and determinant of the Jacobian matrix — 46
 - 2.1.6 Applications — 47
- 2.2 Linear stability analysis of a fixed point in arbitrary dimension — 49
 - 2.2.1 Linear differential equations in arbitrary dimension — 49
 - 2.2.2 Linear stability analysis — 53
 - 2.2.3 The spectrum of the Jacobian matrix determines the stability of a fixed point — 55
- 2.3 From linear eigenspaces to invariant manifolds — 56
- 2.4 Variational analysis around a trajectory — 57
- 2.5 Conclusions — 59

3 Bifurcations of one-dimensional flows — 65

- 3.1 Introduction — 65
- 3.2 Structural stability in one-dimensional systems — 66
 - 3.2.1 Persistence of an isolated fixed point — 66
 - 3.2.2 Structural instability and bifurcation — 66
 - 3.2.3 Bifurcation and tangencies — 67
 - 3.2.4 Essential bifurcations — 68
- 3.3 Generic bifurcations of one-dimensional flows — 71
 - 3.3.1 Saddle-node bifurcation — 71
 - 3.3.2 Transcritical bifurcation — 71
 - 3.3.3 Pitchfork bifurcation — 72
- 3.4 An example of higher-order bifurcation — 75
 - 3.4.1 Fixed points — 75
 - 3.4.2 Stability of the fixed points — 76
 - 3.4.3 Cusp catastrophe — 78
- 3.5 One-dimensional bifurcations in higher dimensions — 78
 - 3.5.1 Local analysis — 78
 - 3.5.2 Example of a two-dimensional saddle-node bifurcation — 79
- 3.6 Conclusions — 81

4 Oscillations — 90

- 4.1 Oscillations and limit cycles — 90
 - 4.1.1 Birth of oscillations through the Hopf bifurcation — 90
 - 4.1.2 Limit cycles — 93
 - 4.1.3 Example: The Brusselator — 96
 - 4.1.4 From weakly to strongly nonlinear oscillations: the van der Pol oscillator — 101
 - 4.1.5 Weakly nonlinear oscillations — 102
 - 4.1.6 Strongly nonlinear oscillations — 103
- 4.2 Stability and bifurcation of periodic orbits — 104
 - 4.2.1 Stability of periodic orbits and their invariant manifolds — 105
 - 4.2.2 Bifurcations of periodic orbits — 109
- 4.3 Driven oscillations and synchronization — 114
 - 4.3.1 Driven oscillations — 114
 - 4.3.2 Synchronization of oscillators: Arnold tongues — 119
- 4.4 Conclusions — 125

5 Quasi-periodicity and strange attractors — 131

- 5.1 Introduction — 131
- 5.2 Periodic and quasi-periodic motion on a torus — 132
 - 5.2.1 Topology of the torus — 132
 - 5.2.2 Periodic behavior — 134

5.2.3	Quasi-periodicity — 135
5.3	Strange attractors and chaos — 137
5.3.1	Attractors in phase space — 137
5.3.2	Characterizing determinism through the first return map — 139
5.3.3	Strange attractors are shaped by stretching, folding, and squeezing processes in phase space — 140
5.3.4	Stretching and squeezing, a universal mechanism for generating chaos — 142
5.3.5	The Smale horseshoe map and the essence of chaos — 143
5.3.6	The Hénon map — 148
5.4	Dealing with real data — 149
5.4.1	Reconstruction of an attractor from experimental signals — 149
5.4.2	Computing a return map from the maxima of a time series — 152
5.5	Conclusions — 153

6 Deeper into chaos — 156

6.1	Quantitative characterization of strange attractors — 156
6.1.1	Lyapunov exponents — 156
6.1.2	Fractal dimension — 162
6.1.3	Unraveling the entanglement of unstable periodic orbits — 168
6.2	Transition toward chaos in the logistic map — 169
6.2.1	Introduction — 170
6.2.2	Fixed points of the logistic map — 172
6.2.3	The subharmonic cascade — 173
6.2.4	Beyond the initial period-doubling cascade — 177
6.2.5	Universality — 182
6.3	Conclusions — 189

For further reading — 195

Bibliography — 197

Index — 199
