

Table of Contents

Preface	VII
1. Microphone Measurements In and Out of Airstream	1
Introduction	1
Research Objectives (and What to Measure)	2
Wind Tunnel Background Noise Including Flow-Induced Noise	3sw
Drive Fan	4
Self-Noise from Strut-Mounted Microphones	6
Air Ducts	11
Voice Communication in Wind	13
Strut Noise	13
Wall-Mounted Microphones	18
Background Noise from Wall Boundary Layer	22
Open-Jet Background Noise	23
Microphone Placement	24
Directivity	24
Near-Field Effects	25
Background Noise and Microphone Placement	25
Reverberant Field	26
Reflections in a Semi-Anechoic Environment	26
Tonal Sound Interference	27
Random Sound Interference	29
Source Identification by Signal Processing	30
Convection Effects and Doppler Shift	31
Sound Propagation Through Shear Layers in Open-Jet Wind Tunnels	34
Change in Acoustic Propagation Direction by Refraction	34
Change in Sound Pressure Level Caused by Refraction	38
Wave Absorption And Scattering by Shear Layer Turbulence	40
Procedure for Applying Shear Layer Corrections	41

Microphone Corrections at High Frequency	42
Free-Field Response	42
Pressure Response	43
Free-Field Correction	45
Microphone Directional Response	47
Aerodynamic Microphone Forebody Frequency Response and Directivity	47
Scaling, Extrapolation and Flight Simulation	51
Removal of Test Day Effects	51
Scaling From Small Scale to Full Scale	52
Flyover Simulation	53
References	58
2. Beamforming in Acoustic Testing	62
Nomenclature	62
Introduction	64
Analysis of Wind Tunnel Acoustic Propagation by Geometrical Optics	66
Uniform Flow	66
Amplitude Approximations for Nonuniform Flow	69
Ray Tracing for Travel Time	69
Array Source-Receiver Model	72
Temporal Considerations	72
Distributed Sources	73
Beamforming	75
Microphone Weight Vectors	75
Beamforming Expressions	76
Performance Analysis	76
The Point Spread Function and Sidelobes	77
Effect of Wind Tunnel Walls	79
Reflected Images	80
Sidelobes from Reflected Images	81
Resolution Requirement	81
Removal of Flow Noise	83
Isolation of the Diagonal Elements of the Cross Spectral Matrix	83
Diagonal Elements Are Not Helpful	83
Diagonal Elements Are Harmful	84
Beamforming without the Diagonal	85
Determination of Quantitative Source Spectra by Integrating the Beamform Map	86

Normalizing the Integral to Account for the Width of the Point Spread Function	86
Rejecting Sidelobes with a Threshold	87
Caution #1: The Sidelobes Are Controlled by the Loudest Source . .	88
Caution #2: The Threshold Excludes Some Real Noise	88
Caution #3: Array Performance May Be less than Optimal	88
Successful Integration	88
Eigenvalue Classification for Quantitative Source Spectra	89
Relationship between Beamforming Weight Vectors and Cross Spectral Matrix Eigenvectors	89
The Array-Centric Definition of Sources	90
Classification	91
Benefits	91
Coherent Sources and Virtual Microphones	92
Array Calibration Using a Speaker	93
Setup	93
The Diagonal Calibration Matrix	94
The Effect of Speaker Calibration for Microphone Position Errors .	94
Array Level Calibration	96
Conclusions	96
References	97
 3. Aeroacoustic Phased Array Testing in Low Speed Wind Tunnels . .	 98
Introduction	98
Justifying the Cost of Aeroacoustic Phased Array Testing	99
An Overview of Aeroacoustic Phased Array Deployment	100
Array Design	100
Array Mount Design and Build	100
Instrumentation Plan	101
Data Acquisition System Configuration	101
Installation	101
Array Calibration	101
Testing	102
Tear Down	102
Non-intrusive Aeroacoustic Array Measurement	102
Broadband Array Design	103
Background	103
Beamforming	104
Evaluating Array Performance	108
Array Resolution	109

Spatial Aliasing	112
Array Design Strategy	114
Random Array Theory	117
Aperiodic Array Design and The Coarray	117
Spiral Arrays	119
Other Array Design Strategies	128
Designing Arrays for Existing Facilities	128
Array Design Process	129
What to Do in Difficult Situations	131
Array Construction and Installation	141
Panel Strength Requirements	142
Simultaneous Measurement Considerations	142
Sensor Mounting	144
Calibration Requirements	144
Traverse Requirements	145
Nested Arrays	149
Cable Strain Relief	149
Heating to Avoid Potential Condensation Problems	151
Geometric Survey Considerations	154
Recessed Array Considerations	154
Laminar Flow Control	155
Array Cover	155
Sensor Location Identification	155
Hole Location Accuracy	156
Hole Plugs	158
Instrumentation	158
Sensors	159
Signal Conditioning	175
Instrumentation Setup and Checkout	178
Phased Array Data Acquisition	179
Data Acquisition System Requirements	179
Data Acquisition System Architecture	186
Acquiring the Data	193
Data Management	196
Array Calibration	199
Calibration Enclosure	200
Array Calibration Source Requirements	201
Calibration Source Evaluation	201
Locating the Calibration Source in the Wind Tunnel –	
Geometric Survey Techniques	202
Calibration Data Acquisition	204
Evaluating Array Calibration Goodness	205

Known Sources	205
Multiple Array Calibration	206
Phased Array Data Reduction	208
The cross-spectral matrix	208
Use of Parallel Processing	209
Special Considerations for Pressurized Wind Tunnel Testing	211
Pressurization of Instrumentation	211
Special Instrumentation Configuration Requirements	211
Reference Microphone Electrostatic Response Calibration	
Under Pressure	212
Tunnel Operation	213
Acoustic Phased Array Testing in Conjunction with Traditional	
Aerodynamic Test Techniques	213
Beyond Aeroacoustic Phased Array Measurements in Low Speed	
Wind Tunnels	214
References	215
 4. Source Characterization By Correlation Techniques	 218
Nomenclature	218
Introduction	219
Mathematical Definitions	220
Cross Spectral Analysis of Linear Systems	222
Application to Aeroacoustic Applications: The Correlation Volume,	
Correlation Area, and Correlation Time	225
Examples of Correlations	228
Correlation of Fluid Motion Variables	228
Correlation of Acoustic Pressure	229
References	256
 5. An Anechoic Facility for Basic Aeroacoustic Research	 258
Nomenclature	258
Introduction	259
The Design of an Anechoic Wind Tunnel Facility	260
The Anechoic Room	260
Wind Tunnel Design Criteria	261
Inlet Section	262

Diffuser Components 264

Diffuser Materials 266

Wind Tunnel Drive System 268

Analysis of the Anechoic Wind Tunnel Facility Performance 268

 Acoustic Calibration 269

 Aerodynamic Calibration 270

 Design Summary 274

Propeller Response to Inflow Distortions 275

 Background 275

 Initial Measurements and Analysis 276

 Development of Unsteady Surface Pressure Sensors
 for Model Propellers 278

 Unsteady Pressure Measurements Using a Single, Thin Airfoil 279

 Experimental Characterization of Grid-Generated Turbulence,
 Including the Aeroacoustic Response of a Downstream Propeller . . . 280

 Unsteady Pressure Measurements of a Four-Bladed Propeller
 Ingesting Turbulence 281

Summary 306

References 306
