Preface to the second edition — V

Preface — VII

1 Balances — 1

- 1.1 The balance: recipe and form — 1
- 1.2 The mass balance — 5
 - 1.2.1 The total mass balance and the species balance — 5
 - 1.2.2 Chemical reactors — 11
 - 1.2.3 Residence time distribution — 16
 - 1.2.4 Multiple tanks in series — 25
- 1.3 The energy balance — 29
 - 1.3.1 Introduction — 29
 - 1.3.2 The total energy balance — 32
 - 1.3.3 The thermal energy balance — 42
 - 1.3.4 The mechanical energy balance and the Bernoulli equation — 44
- 1.4 The momentum balance — 50
- 1.5 Examples of combined use of mass, energy, and momentum balances — 55
 - Appendix 1A — 60
 - Appendix 1B — 62

2 Mechanisms, non-dimensional numbers, and forces — 65

- 2.1 Molecular transport — 65
 - 2.1.1 Moving molecules — 65
 - 2.1.2 Fick, Fourier, Newton — 68
 - 2.1.3 Transport coefficients — 74
 - 2.1.4 Shear stress: an alternative description of molecular momentum transport — 78
- 2.2 Dimensional analysis — 80
 - 2.2.1 Non-dimensional numbers — 80
 - 2.2.2 The Reynolds number and the transition from laminar to turbulent flow — 83
 - 2.2.3 Dimensional analysis: the concept — 86
 - 2.2.4 Dimensional analysis: technique and the Buckingham- π theorem — 89
 - 2.2.5 Examples of dimensional analysis — 91
- 2.3 Flow around immersed objects and net forces — 97
 - 2.3.1 Flow field and flow resistance — 97
 - 2.3.2 Drag force and drag coefficient — 101
 - 2.3.3 Force balance and terminal velocity — 104

3 Heat transport — 108

- 3.1 Steady-state heat conduction — **108**
 - 3.1.1 Heat conduction in Cartesian coordinates — **108**
 - 3.1.2 Analogy with Ohm's law — **111**
 - 3.1.3 Heat conduction in cylindrical coordinates — **113**
 - 3.1.4 Heat conduction in spherical coordinates — **116**
 - 3.1.5 A numerical treatment for two-dimensional Cartesian — **118**
- 3.2 Heat transfer coefficient and Nusselt number — **123**
 - 3.2.1 Newton's law of cooling — **123**
 - 3.2.2 The Nusselt number — **123**
 - 3.2.3 Overall heat transfer coefficient — **124**
- 3.3 Unsteady-state heat conduction — **126**
 - 3.3.1 Penetration theory: conceptual — **126**
 - 3.3.2 Temperature profile and penetration depth — **128**
 - 3.3.3 Applying penetration theory — **130**
 - 3.3.4 Heat transfer coefficient for short times — **134**
 - 3.3.5 Long-term heating — **136**
 - 3.3.6 The overall heating up of an object — **139**
 - 3.3.7 Internal and external heat transport — **145**
 - 3.3.8 Numerical approach — **146**
- 3.4 The general micro-balance for heat transport — **148**
- 3.5 Heat transfer coefficient with convection — **153**
 - 3.5.1 General observations — **153**
 - 3.5.2 Heat transfer in the case of forced convection — **156**
 - 3.5.3 Heat transfer in the case of free convection — **163**
 - 3.5.4 The numerical approach of convective heat transport — **167**
- 3.6 Heat exchangers — **170**
 - 3.6.1 Introduction — **170**
 - 3.6.2 Heat transfer without phase transition — **171**
 - 3.6.3 Heat transfer with phase transition — **175**
- 3.7 Heat transport through radiation — **177**
 - 3.7.1 Emission — **178**
 - 3.7.2 Reflection, transmission, absorption — **179**
 - 3.7.3 Heat transfer through radiation — **182**
 - 3.7.4 Radiant heat transfer coefficient — **185**

4 Mass transport — 188

- 4.1 Analogy between mass transport and heat transport — **188**
- 4.2 Mutual diffusion based on the analogy with heat transport — **190**
 - 4.2.1 Steady-state diffusion in Cartesian coordinates — **191**
 - 4.2.2 Steady-state diffusion in cylindrical coordinates — **192**
 - 4.2.3 Steady-state diffusion in spherical coordinates — **194**

4.2.4	Mass transfer coefficient and Sherwood number —	196
4.2.5	Unsteady-state diffusion: penetration theory —	197
4.2.6	Unsteady-state long-term diffusion —	200
4.3	Diffusion and drift flux —	202
4.4	The general micro-balance for mass transport —	207
4.5	Mass transfer coefficients during convection —	209
4.5.1	General observations —	209
4.5.2	Mass transfer in the case of forced convection —	210
4.5.3	Mass transfer in the case of free convection —	215
4.6	Mass transfer across a phase interface —	216
4.6.1	Introduction on dealing with two phases —	216
4.6.2	The partition coefficient —	218
4.6.3	Mass transfer across a phase interface —	219
4.6.4	Penetration theory at a phase interface —	223
4.7	Simultaneous transport of heat and mass: the wet bulb temperature —	225
5	Fluid mechanics —	229
5.1	Introduction —	229
5.2	Flow meters —	231
5.2.1	Weir —	232
5.2.2	Orifice meter —	235
5.2.3	Rotameter —	236
5.3	Pressure drop along a straight pipeline —	238
5.3.1	The concept of the friction factor —	238
5.3.2	The use of the friction factor —	241
5.3.3	The analogy with heat and mass transfer —	246
5.4	Pressure drop in pipeline systems —	248
5.5	Pressure drop across a packed bed —	252
5.6	Laminar flow of Newtonian fluids —	257
5.6.1	Laminar flow in Cartesian coordinates: due to drag by a moving wall —	257
5.6.2	Laminar flow in Cartesian coordinates: due to a pressure gradient —	260
5.6.3	Laminar flow in Cartesian coordinates: due to gravity —	264
5.6.4	Laminar flow in cylindrical coordinates: due to a pressure gradient —	267
5.7	Laminar flow of non-Newtonian liquids —	271
5.7.1	Power law liquids —	271
5.7.2	Bingham liquids —	274
5.7.3	Casson liquids —	276
5.7.4	Viscoelastic liquids —	276
5.8	The general equations of motion —	278

XII — Contents

- 5.8.1 Fluid mechanics and transport phenomena — **278**
- 5.8.2 The continuity equation — **279**
- 5.8.3 The Navier–Stokes equations — **281**
- 5.8.4 Computational fluid dynamics — **288**

List of symbols — 291

Index — 295
