

# Table of Contents

<b>Outline of Contents .....</b>	<b>1</b>
<b>1 Introduction .....</b>	<b>7</b>
1.1 Newton-Raphson Method for Scalar Equations .....	7
1.2 Newton's Method for General Nonlinear Problems .....	11
1.2.1 Classical convergence theorems revisited .....	11
1.2.2 Affine invariance and Lipschitz conditions .....	13
1.2.3 The algorithmic paradigm .....	20
1.3 A Roadmap of Newton-type Methods .....	21
1.4 Adaptive Inner Solvers for Inexact Newton Methods .....	26
1.4.1 Residual norm minimization: GMRES .....	28
1.4.2 Energy norm minimization: PCG .....	30
1.4.3 Error norm minimization: CGNE .....	32
1.4.4 Error norm reduction: GBIT .....	35
1.4.5 Linear multigrid methods .....	38
Exercises .....	40

---

## Part I ALGEBRAIC EQUATIONS

---

<b>2 Systems of Equations: Local Newton Methods .....</b>	<b>45</b>
2.1 Error Oriented Algorithms .....	45
2.1.1 Ordinary Newton method .....	45
2.1.2 Simplified Newton method .....	52
2.1.3 Newton-like methods .....	56
2.1.4 Broyden's 'good' rank-1 updates .....	58
2.1.5 Inexact Newton-ERR methods .....	67
2.2 Residual Based Algorithms .....	76
2.2.1 Ordinary Newton method .....	76

2.2.2	Simplified Newton method . . . . .	79
2.2.3	Broyden's 'bad' rank-1 updates . . . . .	81
2.2.4	Inexact Newton-RES method . . . . .	90
2.3	Convex Optimization . . . . .	94
2.3.1	Ordinary Newton method . . . . .	94
2.3.2	Simplified Newton method . . . . .	97
2.3.3	Inexact Newton-PCG method . . . . .	98
	Exercises . . . . .	104
<b>3</b>	<b>Systems of Equations: Global Newton Methods</b> . . . . .	109
3.1	Globalization Concepts . . . . .	110
3.1.1	Componentwise convex mappings . . . . .	111
3.1.2	Steepest descent methods . . . . .	114
3.1.3	Trust region concepts . . . . .	117
3.1.4	Newton path . . . . .	121
3.2	Residual Based Descent . . . . .	125
3.2.1	Affine contravariant convergence analysis . . . . .	126
3.2.2	Adaptive trust region strategies . . . . .	128
3.2.3	Inexact Newton-RES method . . . . .	131
3.3	Error Oriented Descent . . . . .	134
3.3.1	General level functions . . . . .	135
3.3.2	Natural level function . . . . .	138
3.3.3	Adaptive trust region strategies . . . . .	145
3.3.4	Inexact Newton-ERR methods . . . . .	152
3.4	Convex Functional Descent . . . . .	161
3.4.1	Affine conjugate convergence analysis . . . . .	162
3.4.2	Adaptive trust region strategies . . . . .	165
3.4.3	Inexact Newton-PCG method . . . . .	168
	Exercises . . . . .	170
<b>4</b>	<b>Least Squares Problems: Gauss-Newton Methods</b> . . . . .	173
4.1	Linear Least Squares Problems . . . . .	175
4.1.1	Unconstrained problems . . . . .	175
4.1.2	Equality constrained problems . . . . .	178
4.2	Residual Based Algorithms . . . . .	182
4.2.1	Local Gauss-Newton methods . . . . .	183
4.2.2	Global Gauss-Newton methods . . . . .	188

4.2.3	Adaptive trust region strategy .....	190
4.3	Error Oriented Algorithms .....	193
4.3.1	Local convergence results .....	194
4.3.2	Local Gauss-Newton algorithms .....	197
4.3.3	Global convergence results .....	205
4.3.4	Adaptive trust region strategies .....	212
4.3.5	Adaptive rank strategies .....	215
4.4	Underdetermined Systems of Equations .....	221
4.4.1	Local quasi-Gauss-Newton method .....	221
4.4.2	Global Gauss-Newton method .....	225
	Exercises .....	228
<b>5</b>	<b>Parameter Dependent Systems: Continuation Methods</b> ..	233
5.1	Newton Continuation Methods .....	237
5.1.1	Classification of continuation methods .....	237
5.1.2	Affine covariant feasible stepsizes .....	242
5.1.3	Adaptive pathfollowing algorithms .....	245
5.2	Gauss-Newton Continuation Method .....	250
5.2.1	Discrete tangent continuation beyond turning points ..	250
5.2.2	Affine covariant feasible stepsizes .....	253
5.2.3	Adaptive stepsize control .....	257
5.3	Computation of Simple Bifurcations .....	263
5.3.1	Augmented systems for critical points .....	263
5.3.2	Newton-like algorithm for simple bifurcations .....	271
5.3.3	Branching-off algorithm .....	277
	Exercises .....	280

## Part II DIFFERENTIAL EQUATIONS

---

<b>6</b>	<b>Stiff ODE Initial Value Problems</b> .....	285
6.1	Affine Similar Linear Contractivity .....	285
6.2	Nonstiff versus Stiff Initial Value Problems .....	288
6.2.1	Picard iteration versus Newton iteration .....	288
6.2.2	Newton-type uniqueness theorems .....	291
6.3	Uniqueness Theorems for Implicit One-step Methods .....	295
6.4	Pseudo-transient Continuation for Steady State Problems .....	299

6.4.1	Exact pseudo-transient continuation . . . . .	300
6.4.2	Inexact pseudo-transient continuation . . . . .	307
Exercises . . . . .		312
<b>7 ODE Boundary Value Problems . . . . .</b>		<b>315</b>
7.1	Multiple Shooting for Timelike BVPs . . . . .	316
7.1.1	Cyclic linear systems . . . . .	318
7.1.2	Realization of Newton methods . . . . .	324
7.1.3	Realization of continuation methods . . . . .	327
7.2	Parameter Identification in ODEs . . . . .	333
7.3	Periodic Orbit Computation . . . . .	337
7.3.1	Single orbit computation . . . . .	337
7.3.2	Orbit continuation methods . . . . .	340
7.3.3	Fourier collocation method . . . . .	344
7.4	Polynomial Collocation for Spacelike BVPs . . . . .	349
7.4.1	Discrete versus continuous solutions . . . . .	350
7.4.2	Quasilinearization as inexact Newton method . . . . .	356
Exercises . . . . .		366
<b>8 PDE Boundary Value Problems . . . . .</b>		<b>369</b>
8.1	Asymptotic Mesh Independence . . . . .	369
8.2	Global Discrete Newton Methods . . . . .	378
8.2.1	General PDEs . . . . .	378
8.2.2	Elliptic PDEs . . . . .	385
8.3	Inexact Newton Multilevel FEM for Elliptic PDEs . . . . .	389
8.3.1	Local Newton-Galerkin methods . . . . .	391
8.3.2	Global Newton-Galerkin methods . . . . .	397
Exercises . . . . .		403
<b>References . . . . .</b>		<b>405</b>
<b>Software . . . . .</b>		<b>416</b>
<b>Index . . . . .</b>		<b>419</b>
