Preface xv

About the Editors xvii

- 1 A Glance on Biorefinery of Chemical Substitutes from Agriculture and Industrial By-products 1**
Suraini Abd-Aziz, Misri Gozan, Mohamad F. Ibrahim, Lai-Yee Phang, and Mohd A. Jenol
 - 1.1 Introduction 1
 - 1.2 Analysis of Feedstocks for Composition and Potential for Chemical Substitutes 3
 - 1.2.1 Different Types of Agricultural Wastes and Associated Risks 4
 - 1.2.2 Waste Utilization Routes 5
 - 1.2.2.1 Fertilizer Application 5
 - 1.2.2.2 Fibers for Textile Industry 5
 - 1.2.2.3 Mushroom Cultivation 6
 - 1.2.2.4 Organic Acids 7
 - 1.2.2.5 Industrial Enzymes 7
 - 1.2.3 Industrial By-products 8
 - 1.2.3.1 Agriculture, Horticulture, and Landscaping 8
 - 1.2.3.2 Use as Raw Material or Additive of New Products 8
 - 1.3 Potential Application of Chemical Substitute Extracted from Selected Agricultural Wastes and Industrial By-products 9
 - 1.4 Conclusions 13
 - References 13
- 2 Antioxidants from Agricultural Wastes and their Potential Applications 19**
Mohd A. Jenol, Yazmin Hussin, Pei H. Chu, Suraini Abd-Aziz, and Noorjahan B. Alitheen
 - 2.1 Introduction to Antioxidants and their Usages 19
 - 2.2 Sources of Antioxidants 21
 - 2.3 Alternative Antioxidants Sources from Agricultural Wastes 22
 - 2.4 Extraction of Antioxidants from Selected Agricultural Waste 22

2.4.1	Maceration	23
2.4.2	Pressurized Liquid Extraction	26
2.4.3	Microwave-assisted Extraction	27
2.4.4	Ultrasounds-assisted Extraction	28
2.4.5	Supercritical Fluid Extraction	29
2.5	Potential Applications of Antioxidants Extracted from Selected Agricultural Wastes	30
2.5.1	Food	30
2.5.2	Cosmetics	32
2.5.3	Therapeutics	33
2.6	Future Direction of Antioxidants from Agriculture Wastes	34
2.7	Conclusions	35
	References	35
3	Lemongrass Oleoresin in Food Flavoring	39
	<i>Madiyah Md Salleh, Shankar Ramanathan, and Rohaya Mohd Noor</i>	
3.1	Introduction	39
3.2	Types of Lemongrass and Their Components	40
3.3	Potential Chemical Substitutes from Lemongrass	42
3.3.1	Essential Oil	42
3.3.2	Phytoconstituents	43
3.3.3	Oleoresins	43
3.4	Characteristics and Properties of Oleoresin	44
3.5	Lemongrass Oleoresin Composition and Function	44
3.6	Extraction Technique of Lemongrass Oleoresin	46
3.6.1	Chemical Extraction	46
3.6.2	Steam Distillation	49
3.6.3	Pressurized Liquid Extraction (PLE)	50
3.7	Application of Lemongrass Oleoresin as Food Flavoring	51
3.8	Oleoresin Prospect	53
3.9	Conclusions	53
	References	54
4	Nanocarbon Material and Chemicals from Seaweed for Energy Storage Components	59
	<i>Tirto Prakoso, Hary Devianto, Heri Rustamaji, Praswasti PDK Wulan, and Misri Gozan</i>	
4.1	Introduction	59
4.2	Source of Seaweed	62
4.2.1	Red Seaweed	62
4.2.2	Brown Seaweed	62
4.2.3	Green Seaweed	63
4.3	Potential Material Substitute from Seaweed	64

4.3.1	Activated Carbon from Seaweed	64
4.3.2	Graphene from Seaweed	66
4.4	Utilization of Seaweed-based Material for Energy Storage Component	76
4.4.1	Seaweed-derived Carbon Material for Supercapacitor Component	76
4.4.2	Seaweed-derived Chemical Materials for Battery Component	79
4.5	Future Prospects and Challenges	82
4.6	Conclusions	83
	References	83
5	Spent Mushroom Substrate as Alternative Source for the Production of Chemical Substitutes	87
	<i>Vikineswary Sabaratnam, Chia Wei Phan, Hariprasath Lakshmanan, and Jegadeesh Raman</i>	
5.1	Introduction	87
5.2	Spent Mushroom Substrate (SMS) as Source of Bulk Enzymes	90
5.2.1	Enzymes Extracted from SMS for Bioremediation	91
5.2.2	Enzymes Extracted from SMS for Green Fuel Feedstock Production: Case Study	92
5.3	Various Challenges and Future Prospects in the Use of SMS	94
5.3.1	Challenges in the Use of Enzymes in SMS	94
5.3.2	Future Prospects for Use of SMS for Production of Green Chemicals	95
5.4	Conclusions	97
	References	98
6	Essential Oil from Pineapple Wastes	103
	<i>Mohamad F. Ibrahim, Nurshazana Mohamad, Mariam J. M. Fairus, Mohd A. Jenol, and Suraini Abd-Aziz</i>	
6.1	Introduction	103
6.2	Pineapple Wastes	104
6.3	Pineapple Essential Oil	105
6.4	Extraction of Essential Oils	106
6.4.1	Distillation	106
6.4.1.1	Hydro-distillation	107
6.4.1.2	Soxhlet Extraction	107
6.4.2	Enzyme-assisted Extraction	109
6.4.3	Supercritical Fluid Extraction	109
6.5	Extracted Essential Oil Compounds	112
6.5.1	Essential Oils and Hydrosols	114
6.5.2	Applications of Essential Oils and Hydrosols	114
6.5.3	Market Analysis of Essential Oils and Hydrosols	116
6.6	Conclusions	117
	References	118

7	Chicken Feather as a Bioresource to Produce Value-added Bioproducts	123
	<i>Kai L. Sim, Radin S. R. Yahaya, Suriana Sabri, and Lai-Yee Phang</i>	
7.1	Introduction	123
7.2	Valorization of Chicken Feathers	124
7.2.1	Feather Composition	125
7.2.2	Types of Feathers Treatment	125
7.3	Bioprocessing of Chicken Feathers into Chemical Substitutes	128
7.3.1	Feather Meal	129
7.3.2	Bioplastic	130
7.3.3	Biofertilizer	130
7.3.4	Keratinase	131
7.4	Molecular Approaches to Improve Keratinolytic Propensity of Native Host	132
7.4.1	Overexpression of Keratinase from Native Host	132
7.4.2	Strain Engineering	134
7.4.3	Enzymatic Consortium	134
7.5	Molecular Approaches to Improve Recombinant Keratinase Production and Characteristics	135
7.5.1	Propeptide Engineering	136
7.5.2	Promoter Engineering	136
7.5.3	Signal Peptide Engineering	137
7.5.4	Directed Evolution	137
7.5.5	Alteration of Protein Domains	138
7.6	Challenges and Future Perspectives	138
7.7	Conclusions	140
	References	140
 8	 Bio-bleaching Agents Used for Paper and Pulp Produced from the Valorization of Corncob, Wheat Straw, and Bagasse	 145
	<i>Kanya C. H. Alifia, Tjandra Setiadi, Ramaraj Boopathy, Hendro Risdianto, Muhammad Irfan, and Ibnu M. Hidayatullah</i>	
8.1	Introduction	145
8.2	Characteristics of Biomass Substrate for Bio-bleaching Enzyme Production	146
8.3	Microbial Sources of Bio-bleaching Enzymes	148
8.3.1	Fungi	148
8.3.2	Yeast	149
8.3.3	Bacteria	149
8.4	Bio-bleaching Enzymes and Their Usage in Pulp and Paper Industry	150
8.4.1	Xylanase	150
8.4.2	Cellulase	151
8.4.3	Laccase	152

8.5	Bioprocessing of Agricultural Wastes for Bio-bleaching Enzyme Production	154
8.5.1	General Block Flow Diagram	154
8.5.2	Upstream Processing	157
8.5.3	Downstream Processing	158
8.6	Techno-economic Evaluation	159
8.6.1	Technical Analysis	159
8.6.2	Economic Analysis	162
8.7	Challenges and Future Outlooks	165
8.8	Conclusions	167
	References	168
9	Recovery of Industrially Useful Enzymes from Rubber Latex Processing By-products	173
	<i>Tan W. Kit, Yong Y. Seng, Siti N. Azlan, Nurulhuda Abdullah, and Fadzlie W. F. Wong</i>	
9.1	Introduction	173
9.2	Processing of Natural Rubber Latex for the Production of Rubber Products	175
9.2.1	NRL Overview	175
9.2.2	NRL Structure	176
9.2.3	NRL Preservation	176
9.2.4	Deproteinization of NRL	176
9.3	General Characteristics of Plant-derived Lysozymes and Chitinases	177
9.4	Conventional and Alternative Activity Assays for Lysozymes and Chitinases	178
9.5	Potential Application of Plant-derived Lysozymes and Chitinases	182
9.6	Potential Strategy for Recovering Lysozymes and Chitinases from NRL	182
9.7	Conclusions	187
	References	188
10	Sago Wastes as a Feedstock for Biosugar, Precursor for Chemical Substitutes	193
	<i>Mohd A. Jenol, Muhd N. Ahmad, Dayang S. A. Adeni, Micky Vincent, and Nurashikin Suhaili</i>	
10.1	Introduction	193
10.2	Current Status of Sago Starch Industry	194
10.2.1	Sago Palm Cultivation	194
10.2.2	Sago Starch Industry in Malaysia	195
10.2.3	Sago Starch Processing in Sarawak	195
10.3	Sago Wastes Biomass	196
10.3.1	Sago Wastewater	196
10.3.2	Sago Bark	197
10.3.3	Sago Hampas	199

10.3.4	Sago Frond	200
10.4	Bioconversion of Sago Wastes into Biosugars and its Derivative Precursors	200
10.5	Bioprocessing Sago Wastes Fermentable Sugar for Chemicals Substitute	202
10.5.1	L-Lactic Acid	202
10.5.2	Antimicrobial and Prebiotic Sugar (Cellobiose) from Sago Frond	203
10.5.3	Sago Frond Silage	204
10.5.4	Enzymes	205
10.5.5	Kojic Acid and its Derivatives	206
10.6	Challenges and Prospect of Sago Wastes Biorefinery	207
10.6.1	Challenges	207
10.6.2	Future Direction of Sago Waste Utilization	207
10.7	Conclusions	209
	References	209
11	Biofertilizer and Other Chemical Substitutes from Sugarcane By-products	213
	<i>Is Fatimah, Ganjar Fadillah, Tatang S. Julianto, Rudy Syahputra, and Habibi Hidayat</i>	
11.1	Introduction	213
11.2	Sugarcane By-products Conversion into Biofertilizer	216
11.3	Sugarcane Bagasse as Raw Material for Soil Improver: Phenol Degradation	218
11.4	Sugarcane By-products Conversion into Chemical	223
11.5	Sugarcane By-product as Material for Biocomposites	227
11.6	Future Perspective of Sugarcane By-products Conversion in the Sugarcane Industrial Cycle	228
11.7	Future Usage and Applications of Sugarcane By-products	229
11.8	Conclusions	230
	References	230
12	Cocoa Butter Substitute from Tengawang (<i>Shorea stenoptera</i>)	235
	<i>Muhammad A. Darmawan, Suraini Abd-Aziz, and Misri Gozan</i>	
12.1	Introduction	235
12.2	Composition and Characteristics of Tengawang Butter	237
12.2.1	Fatty Acids Profile of Tengawang Butter	237
12.2.2	Quality Parameters of Tengawang Butter	238
12.2.3	Solid Fat Content of Tengawang Butter	239
12.2.4	Thermal Properties of Tengawang Butter	240
12.3	Traditional Treatment Process	241
12.4	Extraction and Purification Process of Tengawang	242
12.4.1	Chemical Purification of Tengawang	243

12.4.2	Physical Purification of Tengawang	244
12.5	Economic Feasibility Based on Process Simulation	244
12.6	Benefits and Future Outlook of Tengawang Butter	249
12.7	Conclusions	250
	References	251
13	Bio-succinic Acid Production from Biomass and their Applications	255
	<i>Abdullah A. I. Luthfi, Jian P. Tan, Wen X. Woo, Nurul A. Bukhari, and Hikmah B. Hariz</i>	
13.1	Introduction	255
13.1.1	Background of Succinic Acid Production	255
13.1.2	Global Market and Demands for Bio-succinic Acid	256
13.2	Valorization of Biomass to Bio-succinic Acid	257
13.2.1	Compositional Attributes of the Biomass	258
13.2.2	Size Reduction	258
13.2.3	Pretreatment	259
13.2.4	Hydrolysis	259
13.3	Bio-succinic Acid as Fermentative Metabolite	260
13.3.1	Microbial Workhorse as Potential Biocatalyst	260
13.3.1.1	Bacteria	260
13.3.1.2	Fungi	261
13.3.2	Fermentation Conditions	261
13.3.3	Media Composition	263
13.3.3.1	Carbon Sources	263
13.3.3.2	Nitrogen Sources	264
13.3.3.3	Carbon Dioxide	264
13.3.3.4	Additives	264
13.3.4	Fermentation Configuration and Strategies	264
13.3.4.1	Separate Hydrolysis and Fermentation	265
13.3.4.2	Simultaneous Saccharification and Fermentation/Co-fermentation	265
13.3.4.3	Consolidated Bioprocessing	265
13.3.4.4	Operational Modes	266
13.3.4.5	Immobilization	266
13.4	Purification and Recovery of Succinic Acid	267
13.4.1	Fermentation Broth Constituents	267
13.4.2	Downstream Processing Method	269
13.4.2.1	Reactive Extraction	270
13.4.2.2	Forward Osmosis	271
13.4.2.3	Ion Exchange	271
13.4.2.4	Crystallization	271
13.5	Application of Bio-succinic Acid	272
13.6	Conclusions	273
	References	273

14	Furfural and Derivatives from Bagasse and Corncob	279
	<i>Muryanto Muryanto, Yanni Sudiyani, Andre F. P. Harahap, and Misri Gozan</i>	
14.1	Introduction	279
14.2	Furfural as a Building Block Material	280
14.2.1	5-Chloromethylfurfural	280
14.2.2	HMFCA and Esther	281
14.3	Furfural Derivatives	281
14.3.1	Furfuryl Alcohol	281
14.3.2	Furan	283
14.3.3	Tetrahydrofuran	284
14.3.4	Furoic Acid	284
14.4	Lignocellulosic Biomass as Raw Material for Furfural Production	285
14.4.1	Sugarcane Bagasse	286
14.4.2	Corncob and Corn Stover	286
14.4.3	Other Agriculture and Industrial Biomass	287
14.4.3.1	Rice Straw	287
14.4.3.2	Oil Palm Biomass	287
14.4.3.3	Forest/Wood Biomass	287
14.5	Furfural Production	288
14.5.1	Furfural Production Process	288
14.5.1.1	Pretreatment	288
14.5.1.2	Hydrolysis Process	289
14.5.1.3	Dehydration Processes	291
14.5.1.4	Purification	292
14.5.2	Factors Affecting the Furfural Production	293
14.5.2.1	Catalyst	293
14.5.2.2	Solvent	294
14.6	Techno-economical Aspect	295
14.7	Future Trends	296
14.8	Conclusions	297
	References	297
15	Levulinic and Formic Acids from Rice Straw and Sugarcane Bagasse	301
	<i>Jabosar R. H. Panjaitan and Misri Gozan</i>	
15.1	Introduction	301
15.2	Potential of Biomass Source for the Production of Levulinic and Formic Acids	304
15.2.1	Rice Straw	304
15.2.2	Sugarcane Bagasse	304
15.3	Levulinic Dan Formic Acids Formation	306
15.4	Pretreatment and Production Technologies	306
15.4.1	Size Reduction	306
15.4.2	Biological Pretreatment	307
15.4.3	Delignification	308

15.5	Purification Technologies	309
15.6	Economic Feasibilities	312
15.7	Case Studies	313
15.8	Conclusions	314
	References	314
16	Cellulase as Biocatalyst Produced from Agricultural Wastes	319
	<i>Wichanee Bankeeree, Suraini Abd-Aziz, Sehanat Prasongsuk, Pongtharin Lotrakul, Syahriar NMM Ibrahim, and Hunsa Punnapayak</i>	
16.1	Introduction	319
16.2	Cellulases Diversity	320
16.2.1	Functional Types of Cellulases	320
16.2.2	Cellulase Structures	321
16.2.3	Catalytic Mechanisms	322
16.3	Cellulase-producing Microorganisms	323
16.3.1	Aerobic Microorganisms	323
16.3.2	Anaerobic Microorganisms	323
16.4	Cellulase Properties	325
16.5	Strategies to Improve Cellulase Production	326
16.5.1	Utilization of Agricultural Waste	326
16.5.2	Production Processes	328
16.5.3	Consolidated Bioprocessing	330
16.6	Techno-economic Analysis to Produce Biofuels	331
16.7	Conclusions	332
	References	332
17	Conversion of Glycerol Derived from Biodiesel Production to Butanol and 1,3-Propanediol	337
	<i>Prawit Kongjan, Alissara Reungsang, and Sureewan Sittijunda</i>	
17.1	Introduction	337
17.2	Crude Glycerol Characteristics and Impurities	338
17.3	Bioconversion of Crude Glycerol into Butanol and 1,3-Propanediol	340
17.4	Purification and Recovery of 1,3-Propanediol and Butanol	343
17.4.1	1,3-Propanediol	343
17.4.1.1	Ion-exchange Resin-based Separation	343
17.4.1.2	Hydrodistillation-based Separation	343
17.4.2	Butanol Separation	345
17.4.2.1	In Situ Gas Stripping	345
17.4.2.2	In Situ Pervaporation	346
17.5	Applications of 1,3-Propanediol and Butanol	346
17.6	Challenges and Future Perspective	348
17.7	Conclusions	349
	Acknowledgment	350
