Volume 1

1 Introduction 1

Jian Zhang, Guo-Cong Guo, Rong Cao, and Xin-Tao Wu

2 Coordination-Assembled Metal–Organic Macrocycles and Cages 9

*Xiao-Zhen Li, Yu-Ling Liang, Li-Peng Zhou, Li-Xuan Cai,
Qiang-Yu Zhu, Zhuo Wang, Xiao-Qing Guo, Dan-Ni Yan,
Shao-Jun Hu, Shao-Chuan Li, Shi-Yu Wu, Shi-Long Han, Ran
Chen, Pei-Ming Cheng, Kai Cheng, Xiao-Shan Feng, Tian-Pu
Sheng, Can He, Feng-Rong Dai, and Qing-Fu Sun*

2.1 Introduction 9

2.2 Metallacycles 9

2.2.1 Dinuclear Metallamacrocycles 10

2.2.2 Triangles 10

2.2.3 Rectangle 12

2.2.4 Hexagons 14

2.2.5 Irregular Metallacycles 20

2.2.6 Multilayered Metallacycles 22

2.2.7 Polygon-Based Polymers 28

2.2.8 Responsive Dynamic Metallacycles 34

2.3 Metallacages 35

2.3.1 Helicates 35

2.3.2 Tetrahedron 38

2.3.3 Truncated Tetrahedron 46

2.3.4 Triangular Prism 47

2.3.5	Cubes	50
2.3.6	Octahedron	54
2.3.7	Dodecahedron	61
2.3.8	Cuboctahedrons	65
2.3.9	Hexadecahedrons	65
2.3.10	Barrel-Shaped Cages	67
2.3.10.1	Calixarene Constructed Barrel-Shaped Cages	67
2.3.10.2	Dimetallic Clips-Constructed Barrel-Shaped Cages	68
2.3.11	Multiple Structural Cages	71
2.3.12	Other Cages	74
2.4	Conclusion	77
	Acknowledgments	77
	References	77
3	Structural Chemistry of Metal-Oxo Clusters	81

3.1	Oxo Clusters of Transition Metal	81
3.1.1	Introduction	81
3.1.2	General Synthetic Approaches and Experimental Methods	83
3.1.2.1	General Synthetic Approaches	83
3.1.2.2	Experimental Methods	83
3.1.3	Polyoxotitanates (POTis)	84
3.1.3.1	Diverse Structures of POTis	84
3.1.3.2	Tuneable Properties of POTis: Bandgap Engineering and Photo-Related Activities	89
3.1.3.3	Potential Application of POTis	92
3.1.4	Polyoxovanadates (POVs)	95
3.1.4.1	Diverse Structure of POVs	95
3.1.4.2	Tunable Properties and Potential Applications of POVs	101
3.1.5	Polyoxoniobates (PONbs)	102
3.1.6	Polyoxomolybdates (POMos)	104
3.1.7	Polyoxopalladates (POPs)	105
3.1.8	Polyoxotungstates (POTs)	107

3.1.8.1	Transition-Metals-Substituted-POTs (TMSPs)	107
3.1.8.2	Inorganic–Organic Hybrid TMSPs	107
3.1.9	Polyoxotantalates (POTas)	109
3.2	Oxo Clusters of Main Group Metal	111
3.2.1	Introduction	111
3.2.2	Synthesis of Borates	111
3.2.2.1	Inorganic Templated Borates	112
3.2.2.2	Organic-Templated Borates	113
3.2.2.3	TMC-Templated Borates	113
3.2.2.4	Templated Synthesis of Aluminoborates	115
3.2.3	Synthesis of Germinates and Borogermanates	116
3.2.3.1	Templated Synthesis of Germinates	116
3.2.3.2	Templated Synthesis of Germinates	117
3.2.3.3	Self-Polymerization and Induced Congregation of Lanthanide Germanate Lusters	118
3.2.4	Aluminum Oxo Clusters Hydrolysis and Condensation	119
3.2.4.1	Aluminum Oxo Clusters Isolated from Organic Solutions	119
3.2.4.2	Aluminum Oxo Clusters Via Aqueous Synthetic Routes	120
3.3	Oxo Clusters of Lanthanides	122
3.3.1	Introduction	122
3.3.2	High-Nuclearity Clusters of Lanthanides	123
3.3.2.1	High-Nuclearity Lanthanide Clusters Supported by O-Donor Ligands	123
3.3.2.2	High-Nuclearity Lanthanide Clusters Supported by N-Donor Ligands	127
3.3.2.3	High-Nuclearity Lanthanide Clusters Supported by Multiple N,O-Donor Ligands	129
3.3.2.4	High-Nuclearity Lanthanide Clusters Supported by Calix[<i>n</i>]arenes Ligands	136
3.3.2.5	High-Nuclearity Lanthanide Clusters Supported by Other Donor Ligands	139
3.3.3	Monometallic Lanthanide-Based Single-Molecule Magnets	140
3.3.4	Heterometallic 3d–4f Clusters	142

3.4	Conclusion	149
