Foreword

By Franz Josef Radermacher	17
Green electricity as a starting point	18
Synthetic fuels (eFuels)	20
A courageous author	21

Introduction

Methanol as an essential contribution to climate protection	25
--	-----------

1 Methanol has long been suitable for everyday use	31
Mobility	32
Cars	35
The VW Beetle that burns methanol	35
Super sports car with methanol fuel cell	36
TPV converters for electric vehicles	38
Methanol for trucks	39
Over 100,000 methanol cars in China	40
Methanol for Formula E?	41
Shipping	41
Shipping relies on methanol	41
Tests on the Baltic Sea ferry “Mariella”	42
Methanol for the new research cutter “Uthörn II”	43
Largest container shipping company converts to methanol	44

Air traffic	45
Flying with synthetic kerosene made from methanol	45
Methanol fuel cells for turboprop aircraft	46
Heat generation	47
Heating buildings with methanol	47
Mobile heaters for event tents and construction sites	50
Power generation	51
Electricity from the mini power plant	51
Methanol in the chemical industry	53
 2 How methanol can secure energy supply	 57
Security of supply in Switzerland	58
Proposals for little result-yielding solutions	60
Expansion and new construction of dam walls	61
The call for new nuclear power plants	62
Power to Liquid: Methanol is liquid electricity	63
Methanol offers high efficiency as an electricity storage medium	64
 3 The methanol cycle	 67
The synthesis of methanol	68
The idea of a methanol economy	69
Pioneering work in Aachen	70
The cycle in a nutshell	72
George A. Olah: Synthetic methanol was his message	72

4 The benefits of synthetic methanol	77
Sustainable methanol does not pollute the environment	78
Methanol can replace all fossil fuels	79
Why methanol is a better solution than hydrogen	81
The Girl with the Red Balloon	82
George A. Olah: Let's forget hydrogen!	84
Ammonia as a risky alternative	86
Methanol is easy to store and distribute	88
 5 Why methanol has not yet been widely accepted as an energy source	 91
Paradigm shifts have no laws	92
New things are not always welcome right away	93
Format wars as an obstacle	94
Lobbyism slows down innovation	95
Gas lobby bets on hydrogen	96
The Swiss Methanol Institute	97
Mountain cantons benefit from water rates	98
 6 Methanol – what is it anyway?	 101
Properties of methanol	102
Methanol can also be found in nature	102
The Wood Spirit	102
Methanol pioneers	103
Robert Boyle	103
Jean-Baptiste Duma and Eugène-Melchior Péligot	104

Marcelin Berthelot	105
Matthias Pier, Alwin Mittasch and Fritz Winkler	106
How methanol is produced	107
Electrolysis as the cleanest solution	109
How to produce enough sustainable methanol	109
Self-sufficient energy supply is an illusion	110
Methanol can come from anywhere	112

7 Methanol has enormous potential

for the future	117
The potential of methanol production	119
Green electricity for methanol production	119
Photovoltaics on agricultural land	121
Decentralised plants for methanol production	122
Producing methanol with the help of bacteria	124
Methanol from offshore wind farms and “solar islands”	124
Methanol is becoming critical as an electricity storage	125
The potential of methanol use	126
Methanol as electricity storage and fuel	127
Methanol as fuel	128
Methanol for fuel cell operation	129
National and international cooperation	129
The further potential of methanol	130
Safety is central	131

8 This is how methanol can become a widely used energy form	135
Information and education	138
Change in structures and processes	139
High-quality workplaces	139
Creating acceptance for power outputs	140
Futuristic-looking lighthouse projects	140
Climate change will not tolerate any delay	142
 9 Urs A. Weidmann and Silent-Power	 145
My path to methanol	145
Silent-Power AG	147
Products	147
Methanol M99	148
Econimo mini power plant	148
Radiant heaters and mobile heaters	149
Building heating	149
Power generators	149
Powering electric vehicles	150
Patents and awards	151
Certification	151
