Abstract	v
Kurzfassung	vii
1 Introduction	1
1.1 Systems of Systems	1
1.1.1 System-wide control and optimization of SoS	4
1.1.2 Modeling and Simulation of SoS	5
1.2 Contribution of this thesis	8
1.3 Structure of this Thesis	10
2 Control and Optimization of SoS	11
2.1 Survey of SoS Control and Optimization Algorithms	12
2.1.1 Hierarchical Control	12
2.1.2 Distributed Control	25
2.1.3 Decentralized Control	28
2.1.4 Coalitional Control	29
2.2 Importance of Validation of SoS control and optimization algorithms	31
3 Modeling and Simulation of SoS	33
3.1 Survey of Different Modeling Paradigms	34
3.2 Survey of Different SoS Simulation Paradigms	38
3.3 Survey of Different Simulation Environments	42
3.3.1 gPROMS	42
3.3.2 MATLAB/Simulink	42
3.3.3 Modelica-based simulation tools	43
3.3.4 Suitable Simulation Environment for SoS Modeling	45

3.4	Concluding the specifications of the proposed Simulation and Validation Framework	46
4	The Simulation and Validation Framework	47
4.1	Validation Models	49
4.2	Control and optimization components	50
4.3	The Model Management Engine	51
4.4	Standardized Interfaces	53
4.4.1	Data Interfaces	53
4.4.2	The SVF External Function Interface	54
4.4.3	Event Interfaces	55
4.5	Event-driven execution approach	57
4.6	Connecting the SVF to industrial software	58
5	The SVF Configuration Information	61
5.1	The set of model components	63
5.1.1	The set of validation model components	63
5.1.1.1	Definition of data interfaces	64
5.1.1.2	Definition of event interfaces	66
5.1.2	The set of controller components	67
5.1.2.1	Definition of the data interface set	67
5.1.2.2	Definition of the event interface set	68
5.2	Sampling time definitions	68
5.3	Definition of the data communication structure	69
5.3.1	Single and multiple connections between validation model components	70
5.3.2	Single and multiple connections between validation model components and controller components	70
5.3.3	Single and multiple connections between controllers	71
5.4	Definition of the event communication structure	71
6	Generation of the SoS Simulation Model	73
6.1	The SoS model structure in SVF	73
6.2	Steps towards model generation	75
7	Application Examples	81
7.1	Distributed management of a chemical production complex	81

7.1.1	Implementing the case study in the Simulation and Validation Framework	83
7.2	Optimization of a multi reactor semi-batch system	86
7.2.1	Problem Formulation	88
7.2.2	Implementing the case study in the Simulation and Validation Framework	90
7.3	A hybrid two-tank system under discrete control	92
7.3.1	Implementing the case study in the Simulation and Validation Framework	94
7.4	Distributed control of a four-tank system	95
7.4.1	Implementing the case study in the Simulation and Validation Framework	98
8	Summary, Conclusions and Future Research Directions	101
8.1	Summary and Conclusions	101
8.2	How and when to use the SVF	102
8.2.1	When to use the SVF	102
8.2.2	How to use the SVF	103
8.3	Future Research Directions	104
A	How to use the SVF External function interface	105
A.1	Black-box MATLAB-based control and optimization algorithms	105
A.1.1	Initialization and termination of the black-box control and optimization algorithms	105
A.1.2	Execution of the black-box control and optimization algorithms	106
A.1.3	The invocation of the SVF external interface functions by the Mod- elica external function interface	109
A.2	White-box MATLAB-based control and optimization algorithms	111
A.2.1	Initialization and termination of the white-box MATLAB-based control and optimization algorithms	111
A.2.2	Execution of the white-box MATLAB-based control and optimiza- tion algorithms	112
A.2.3	The invocation of the SVF external interface functions by the Mod- elica external function interface	114
A.3	White-box Python-based control and optimization algorithms	114
A.3.1	Initialization and termination of the white-box Python-based con- trol and optimization algorithms	115

A.3.2	Execution of the white-box Python-based control and optimization algorithms	119
A.3.3	The invocation of the SVF external function interface by the Mod- elica external function interface	121
A.4	White-box C-based control and optimization algorithms	122
B	The XML Configuration File and XML Schema	123
B.1	XML configuration file	123
B.2	XML Schema	136
	Bibliography	149
	CV	161
