Abstract	vii
List of Figures	xiii
List of Tables	xv
List of Algorithms	xvii
Acronyms and Notation	xix
1 Introduction	1
1.1 Motivation and Background	1
1.2 A First Illustrative Example	1
1.3 Overview of this Thesis	3
2 Mathematical Basics and Preliminaries	5
2.1 Useful Concepts from Matrix- and Eigenvalue Theory	5
2.2 Important Concepts from Linear Control Theory	11
2.3 Matrix Equations	12
2.4 Used Software, Hardware, and Test Examples	27
3 Low-Rank ADI Iteration for Lyapunov and Sylvester Equations	31
3.1 Origin of the ADI Iteration	32
3.2 LR-ADI Iteration for Lyapunov Equations	32
3.3 The Factored ADI Iteration for Sylvester Equations	48
3.4 Conclusions	60
4 Efficient Handling of Complex ADI Shift Parameters	61
4.1 Complex Shift Parameters in the G-LR-ADI Iteration for Lyapunov Equations	62
4.2 Computing Real Low-rank Solutions by the fADI Iteration	75
4.3 Conclusions	85
	xi

5	Self-Generating ADI Shift Parameters	87
5.1	Introduction and Motivation	87
5.2	A Short Overview of Precomputed ADI Shift Parameters	88
5.3	Self-Generating Shifts	91
5.4	Shift Parameters for the Sylvester ADI Iteration	115
5.5	Summary and Further Research Perspectives	125
6	Low-Rank Newton Methods for Algebraic Riccati Equations	129
6.1	Continuous-time Algebraic Riccati Equations	129
6.2	Nonsymmetric Algebraic Riccati Equations	144
6.3	Conclusions	156
7	Applications to Model Order Reduction	159
7.1	Concepts and Goals of Model Order Reduction	159
7.2	Balanced Truncation Model Order Reduction	161
7.3	Balanced Truncation in Limited Frequency Intervals	172
7.4	Conclusion and Outlook	200
8	Conclusions and Outlook	201
8.1	Summary	201
8.2	Future Research Perspectives	202
A	Additional Algorithms	205
B	Theses	207
	Bibliography	209
