Preface ix

1	Introduction to Untethered Miniature Soft Robots	1
1.1	Introduction	1
1.2	Working Mechanisms of Untethered Soft Robots	2
1.2.1	Magnetic Actuation	2
1.2.2	Light Actuation	4
1.2.3	Acoustic Actuation	5
1.2.4	Thermal Actuation	6
1.2.5	Chemical Actuation	6
1.2.6	Biohybrid Actuation	7
1.3	Fabrication Methods of Untethered Soft Robots	7
1.3.1	Molding	7
1.3.2	3D Printing Techniques	10
1.3.3	Semiconductor and Microelectronic Techniques	11
1.3.4	Modular Assembly Based on Bonding Agents	12
1.4	Applications of Miniature Soft Robots	12
1.4.1	Biomedical Application	12
1.4.2	Environmental and Proprioceptive Sensing	13
1.4.3	Intelligent Electronics	15
1.4.4	Micromanipulation	16
1.5	Scope and Layout of the Book	16
1.5.1	Scope of the Book	16
1.5.2	Layout of the Book	17
	Abbreviations	19
	References	19
 2	 Silicone Elastomers-Based Miniature Soft Robots	 25
2.1	Introduction	25
2.2	Soft Elastomer-Based Robots with Programmable Magnetization Profiles	28
2.2.1	Untethered Soft Robots Based on Template-Aided Magnetizing	28

2.2.2	Small-Scale Soft Machines Based on Buckling Instability-Encoded Magnetization	29
2.2.3	Small-Scale Soft Machines Based on 3D Printing of Ferromagnetic Materials	32
2.2.4	3D Miniature Soft Machines Based on Bottom-up Heterogeneous Assembly	34
2.2.4.1	Voxel Fabrication and Magnetization	35
2.2.4.2	Jig-Assisted Assembly Approach	36
2.2.4.3	Demonstration of Miniature Soft Machines Fabricated by the Jig-Assisted Assembly Approach	40
2.3	Reprogrammable Soft Machines	41
2.4	Multi-Stimuli Responsive Transformation of Magneto-Elastomer Based Soft Structures	43
2.4.1	Solvent and Magnetic-Responsive Behavior of Magneto-Elastomers	44
2.4.2	Investigation of the Dynamic Transformations of Cellular Structures	47
2.5	Multimodal and Bioinspired Locomotion Adopted for Elastomer-Based Robot	50
2.6	Potential Biomedical Applications of Miniature Magnetic Soft Machines	55
2.7	Fluidic Pumping by the Magneto-Elastomers	60
2.8	Other Potential Applications of the Magneto-Elastomers	64
2.9	Summary	66
	Abbreviations	67
	References	67
3	Carbon-Based Miniature Soft Robots with Rolled-up Concept	73
3.1	Introduction	73
3.2	The Choices of Carbon-Based Materials	74
3.3	The Working Mechanism of Carbon-Based Materials	76
3.3.1	Light-Induced Expansion	76
3.3.2	Light-Induced Shrinkage	81
3.3.3	Humidity-Induced Deformation	83
3.4	The Programming Shape Changes of Actuators and Their Applications	87
3.4.1	Light-Induced Local Modification	88
3.4.2	Non-light-Induced Local Modification	90
3.4.3	Self-Healing	93
3.4.4	Oriental Control of Elements in Actuators	97
3.5	Summary	99
	Abbreviations	99
	References	100

4	Hydrogels-Based Miniature Soft Robots	107
4.1	Introduction	107
4.2	Fabrication of Reconfigurable Hydrogel Micromachines	109
4.2.1	Design and Characterization of Smart Hydrogel for 4D Printing	110
4.2.2	Reconfigurable Soft Microdevices Fabricated by Point-by-Point 4D Printing	113
4.2.3	Reconfigurable Soft Microdevices Fabricated by Asymmetric Bessel Beam	115
4.2.4	Reconfigurable Soft Microdevices Fabricated by Complex Laser Scanning Strategy	121
4.3	Modular Design of Reconfigurable Soft Robots Based on 4D Microscale Building Blocks	123
4.3.1	Designing Microscale Building Blocks	123
4.3.2	Modular Assembly of Building Blocks Based on DH Matrix	126
4.3.3	Inverse and Forward Design of Modular Morphing System	128
4.4	Application of Reconfigurable Soft Robots	130
4.4.1	pH-Responsive Microparticle and Cell Gripper	130
4.4.2	Localized Cancer Cell Treatment	132
4.5	Summary	134
	Abbreviations	135
	References	135
5	Liquid Crystal Network and Elastomer-Based Miniature Soft Robots	141
5.1	Introduction	141
5.2	Stimuli-Responsiveness Based on Programmed Director Field	143
5.2.1	Programmed Voxellated Director Fields via Two Surface-Patterned Confining Glasses	143
5.2.2	Arbitrary Director Fields Formed via 3D Assembly	144
5.2.3	3D Microstructures with Uniform and 2D Director Field Alignment	146
5.2.4	3D LCN Microstructures with Encoded 3D Director Field and their 3D-to-3D Shape Transformation	147
5.2.5	Thermal Shape Transformation of LCN Structures Based on 1D and 2D Voxels Assembly	149
5.2.6	Reversible 3D-to-3D Shape Transformation of the Assembled 3D LCE Structures	152
5.3	Magnetic Liquid Crystal Elastomer Composites for Miniature Machines	153
5.3.1	Material Designs of Magnetic LCE Systems	154
5.3.2	Multiple-Stimuli Responsiveness of Magnetic LCE Systems	158
5.3.3	Adaptive Locomotion of Magnetic LCE-Based Robots	161

5.4	Summary	165
	Abbreviations	166
	References	167
6	Flexible Ferrofluid as Soft Robotic Agents	173
6.1	Introduction	173
6.2	Description of Ferrofluids	174
6.3	Deformation Behaviors of FDRs	174
6.3.1	The Influence of Magnetic Fields on the Deformation Behaviors of FDRs	175
6.3.1.1	Magnetic Fields Induced by Permanent Magnets	175
6.3.1.2	Magnetic Fields Induced by Electromagnetic Coils	181
6.3.2	The Influence of FDRs' Parameters on their Deformation Behaviors	195
6.3.3	The Influence of Contacting Substrate on the Deformation Behaviors of FDR	197
6.4	Applications of FDRs	198
6.4.1	Cargo Capturing and Delivering	198
6.4.2	Objects Sorting	200
6.4.3	Liquid Pumping and Mixing	201
6.4.4	Liquid Skin of Soft Robots	203
6.4.5	Phase Transitional Metallic Ferrofluid-Based Gripper	206
6.5	Summary	206
	Abbreviations	209
	References	209
7	Conclusions and Future Prospects	213
7.1	Introduction	213
7.2	Other Functional Materials Used for Miniature Soft Robots	213
7.2.1	Shape-Memory Materials	213
7.2.2	Biohybrid Materials	215
7.3	Multi-Material Integration Strategies	216
7.4	Multifunctional Integration for Miniature Soft Robots with Perception Capabilities	218
7.5	Perspectives Toward Intelligent and Autonomous Soft Robots	220
	Abbreviations	223
	References	224
	Index	229
