## Invited Talks

|                                                                                                                                                   |   |
|---------------------------------------------------------------------------------------------------------------------------------------------------|---|
| Analysis of Systems with Stochastic Process Creation (Abstract) . . . . .                                                                         | 1 |
| <i>Javier Esparza</i>                                                                                                                             |   |
| Verifying Concurrent Programs with Chalice (Abstract) . . . . .                                                                                   | 2 |
| <i>K. Rustan M. Leino</i>                                                                                                                         |   |
| Static Timing Analysis for Hard Real-Time Systems . . . . .                                                                                       | 3 |
| <i>Reinhard Wilhelm, Sebastian Altmeyer, Claire Burguière,<br/>Daniel Grund, Jörg Herter, Jan Reineke, Björn Wachter, and<br/>Stephan Wilhelm</i> |   |

## Invited Tutorials

|                                                                        |    |
|------------------------------------------------------------------------|----|
| Abstract Interpretation-Based Protection (Extended Abstract) . . . . . | 23 |
| <i>Roberto Giacobazzi</i>                                              |    |
| Advances in Probabilistic Model Checking (Abstract) . . . . .          | 25 |
| <i>Joost-Pieter Katoen</i>                                             |    |
| Building a Calculus of Data Structures . . . . .                       | 26 |
| <i>Viktor Kuncak, Ruzica Piskac, Philippe Suter, and Thomas Wies</i>   |    |

## Regular Papers

|                                                                                                                    |     |
|--------------------------------------------------------------------------------------------------------------------|-----|
| Temporal Reasoning for Procedural Programs . . . . .                                                               | 45  |
| <i>Rajeev Alur and Swarat Chaudhuri</i>                                                                            |     |
| Improved Model Checking of Hierarchical Systems . . . . .                                                          | 61  |
| <i>Benjamin Aminof, Orna Kupferman, and Aniello Murano</i>                                                         |     |
| Path-Oriented Reachability Verification of a Class of Nonlinear Hybrid Automata Using Convex Programming . . . . . | 78  |
| <i>Lei Bu, Jianhua Zhao, and Xuandong Li</i>                                                                       |     |
| Complexity Bounds for the Verification of Real-Time Software . . . . .                                             | 95  |
| <i>Rohit Chadha, Axel Legay, Pavithra Prabhakar, and<br/>Mahesh Viswanathan</i>                                    |     |
| An Abstract Domain to Discover Interval Linear Equalities . . . . .                                                | 112 |
| <i>Liqian Chen, Antoine Miné, Ji Wang, and Patrick Cousot</i>                                                      |     |
| Interpolant Strength . . . . .                                                                                     | 129 |
| <i>Vijay D'Silva, Daniel Kroening, Mitra Purandare, and<br/>Georg Weissenbacher</i>                                |     |

|                                                                                                   |            |
|---------------------------------------------------------------------------------------------------|------------|
| Checking Bounded Reachability in Asynchronous Systems by Symbolic Event Tracing .....             | 146        |
| <i>Jori Dubrovin</i>                                                                              |            |
| Invariant and Type Inference for Matrices .....                                                   | 163        |
| <i>Thomas A. Henzinger, Thibaud Hottelier, Laura Kovács, and Andrei Voronkov</i>                  |            |
| Deriving Invariants by Algorithmic Learning, Decision Procedures, and Predicate Abstraction ..... | 180        |
| <i>Yungbum Jung, Soonho Kong, Bow-Yaw Wang, and Kwangkeun Yi</i>                                  |            |
| Automatic Abstraction for Congruences .....                                                       | 197        |
| <i>Andy King and Harald Søndergaard</i>                                                           |            |
| Shape Analysis of Low-Level C with Overlapping Structures .....                                   | 214        |
| <i>Jörg Kreiker, Helmut Seidl, and Vesal Vojdani</i>                                              |            |
| Abstract Threads .....                                                                            | 231        |
| <i>Shuvendu K. Lahiri, Alexander Malkis, and Shaz Qadeer</i>                                      |            |
| Shape Analysis with Reference Set Relations .....                                                 | 247        |
| <i>Mark Marron, Rupak Majumdar, Darko Stefanovic, and Deepak Kapur</i>                            |            |
| Shape Analysis in the Absence of Pointers and Structure .....                                     | 263        |
| <i>Matthew Might</i>                                                                              |            |
| An Analysis of Permutations in Arrays .....                                                       | 279        |
| <i>Valentin Perrelle and Nicolas Halbwachs</i>                                                    |            |
| Regular Linear Temporal Logic with Past .....                                                     | 295        |
| <i>César Sánchez and Martin Leucker</i>                                                           |            |
| Model-Checking In-Lined Reference Monitors .....                                                  | 312        |
| <i>Meera Sridhar and Kevin W. Hamlen</i>                                                          |            |
| Considerate Reasoning and the Composite Design Pattern .....                                      | 328        |
| <i>Alexander J. Summers and Sophia Drossopoulou</i>                                               |            |
| RGSep Action Inference .....                                                                      | 345        |
| <i>Viktor Vafeiadis</i>                                                                           |            |
| Best Probabilistic Transformers .....                                                             | 362        |
| <i>Björn Wachter and Lijun Zhang</i>                                                              |            |
| Collections, Cardinalities, and Relations .....                                                   | 380        |
| <i>Kuat Yessenov, Ruzica Piskac, and Viktor Kuncak</i>                                            |            |
| <b>Author Index</b> .....                                                                         | <b>397</b> |
