Abstract	xxvii
Kurzfassung	xxix
1 Introduction	1
1.1 Thermal Protection in Aerospace Applications	2
1.2 Transpiration Cooling	7
1.3 Motivation and Approach	13
2 Physical Fundamentals	19
2.1 Governing Equations for Compressible Flow	19
2.1.1 Conservation of Mass	20
2.1.2 Conservation of Momentum	21
2.1.3 Conservation of Energy	22
2.1.4 Equations of State	23
2.1.5 Physical Properties	24
2.2 High-Speed Flows	27
2.2.1 Shock Waves and Expansion Fans	28
2.2.2 Viscous Effects	32

2.3	Heat Transfer	35
2.3.1	Heat Transfer by Convection	35
2.3.2	Heat Transfer by Conduction	38
2.4	Theory of Porous Media	39
2.4.1	Modelling Approaches	40
2.4.2	Through-Flow Behaviour of Porous Structures	40
2.4.3	Thermal Behaviour of Porous Structures	42
3	Experimental Methods	45
3.1	Experimental Setup	45
3.1.1	ITLR Hot Gas Facility	46
3.1.2	Modular Test Channel	47
3.2	Investigated Porous Samples	49
3.3	Measurements and Applied Techniques	53
3.3.1	Main-Flow Conditions	53
3.3.2	Coolant Plenum and Porous Sample	54
3.3.3	Wall Temperature Measurement	54
3.3.4	Infrared Thermography	57
3.3.5	Schlieren Imaging	59
4	Numerical Methods	61
4.1	Finite Volume Method	62
4.2	Turbulence Modelling	64
4.2.1	Reynolds-Averaged Navier-Stokes Equations	65
4.2.2	Near-Wall Treatment	68
4.2.3	Shear Stress Transport Model	70
4.3	Volume-Averaged Porous Structure Equations	72
4.4	Numerical Treatment of Porous Surfaces	73
4.4.1	Coolant-Reservoir Side	74
4.4.2	Hot-Gas Side	76
4.5	OpenFOAM Solver Development	84
5	Porous Structure - Through Flow and Internal Heat Exchange	89
5.1	Internal Heat Exchange	89
5.1.1	Evaluation of Analytical LTNE Criterion	90
5.1.2	Solver Validation	92
5.2	Unidirectional Flow through Porous Media	93
5.2.1	Experimental Determination of Permeability Coefficients	93
5.2.2	Solver Validation	97
5.2.3	Influence of Coolant Temperature	98

5.3	Multi-Dimensional Flow through Porous Media	102
5.3.1	Partial-Sealing Experiment	102
5.3.2	Results and Discussion	104
5.4	Summary	107
6	Boundary-Layer Injection of Various Coolants	109
6.1	Test-Case Description	109
6.1.1	Experimental Setup	110
6.1.2	Numerical Setup	111
6.2	Injection of Various Coolants into a Main Flow at Isothermal Conditions	112
6.3	Injection of Various Coolants into a Heated Main Flow	115
6.4	Sensitivity of Turbulence Boundary Condition	117
6.5	Summary	119
7	Transpiration Cooling of CMC Structures in Supersonic Flows	121
7.1	Supersonic Channel Flow without Boundary-Layer Blowing . .	122
7.1.1	Analysis of Flow Field	123
7.1.2	Inlet Conditions for Reduced Numerical Domain	126
7.1.3	Summary	127
7.2	Transpiration Cooling - Simulation Setup and Sensitivity Studies	128
7.2.1	Coupled Simulation Setup	128
7.2.2	Mesh Study	130
7.2.3	Reference Test Case	132
7.2.4	Turbulence Boundary Condition	137
7.2.5	Volumetric Heat Transfer Coefficient	139
7.2.6	Thermal Boundary Condition on Coolant Side	140
7.2.7	Summary	142
7.3	Reference Sample - Uniform Main Flow and Flat Sample . . .	143
7.3.1	Air Injection	143
7.3.2	Lateral Influences on Thermal Situation of Porous Sample	149
7.3.3	Foreign-Gas Injection	154
7.3.4	Cooling Efficiency	159
7.3.5	Summary	162
7.4	Contoured Sample - Variation of Wall Thickness	165
7.4.1	Wall Temperatures for Injection of Air	166
7.4.2	Coolant Mass Flow Distribution and Sample Temperatures	168
7.4.3	Summary	171

7.5	Shock Generator - Transpiration Cooling in More Complex Flow Fields	172
7.5.1	Shock-Generator Flow Field without Boundary-Layer Blowing	172
7.5.2	Transpiration Cooling for Non-Uniform Main Flow Field	178
7.5.3	Wall-Thickness Variation in Shock-Generator Flow Field	183
7.5.4	Summary	185
7.6	Double-Wedge Sample - Combined Effects of Geometry and Flow Field	187
7.6.1	Non-Uniform Flow Field without Blowing	187
7.6.2	Influence of Boundary-Layer Blowing on Main Flow Field	190
7.6.3	Geometry and Flow-Field Effects on Transpiration Cooling	192
7.6.4	Summary	200
8	Conclusion and Outlook	203
	Bibliography	209
	Appendix	
A	Uncertainty Analysis	229
B	Additional Data on Experimental Setup	235
C	Additional Results on Multi-Dimensional Flow through Porous Media	237
C.1	Numerical Pre-Study on Anisotropic Permeability	237
C.2	Multi-Dimensional Flow in Parallel-Perpendicular Fibre Plane	240
D	Modelling of Mass Injection through Porous Walls	245
E	Additional Numerical and Experimental Results for Transpiration Cooling in Supersonic Flow	249
E.1	Selection of Turbulent Prandtl and Turbulent Schmidt Numbers	249
E.2	Inlet Conditions for Reduced Simulation Domain	250
E.3	Formation of Shock Waves due to Boundary-Layer Injection .	252
E.4	Shock-Wave/Coolant-Film Interaction in Wake Region	253
F	Analytical Solution of Porous Media Energy Equations	257
