Preface *xxiii*

1	A Reader's Guide to Basic Electrochemistry for Biotechnology	1
2	A Basic Introduction to Microbial Electrochemical Technologies	3
2.1	Introduction to Microbial Energy Conversion and Microbial Electrochemical Technologies	3
2.1.1	Microbial Conversions	3
2.1.2	Microbial Fuel Cells and Microbial Electrolysis Cells	5
2.2	Electroactive Microorganisms and Mechanisms of Extracellular Electron Transfer	7
2.2.1	Extracellular Electron Transfer Mechanisms: The Role Models of Electroactive Microorganisms	7
2.2.2	A Snapshot on Electroactive Microorganisms	8
2.3	Energetics: The Redox Tower and a Water Analogy	9
2.4	Wastewater Characteristics	13
2.4.1	Physical Wastewater Characteristics	14
2.4.2	Chemical Wastewater Characteristics	14
2.4.3	Organic Constituents in Wastewater	15
2.4.4	Biological Wastewater Characteristics	16
2.5	Microbial Electrochemical Technologies: Systems and Design	17
2.5.1	Main Components and Design	17
2.5.2	Operational Modes	18
2.5.3	Electrodes and Current Collectors	19
2.5.4	Ionic Charge Transport and Membranes	21
2.5.5	Lab Measurements and Criteria for Normalization	22
2.6	Short Alert on Terminology	23
	Questions	24
	References	25

3	Electrochemical Potential, Electrode Potential, and the Need for Reference Electrodes	27
3.1	Introduction to Electrochemical Potentials	27
3.1.1	A Physical-Chemical Approach Toward Electrochemical Potentials	28
3.2	Electrodes and Electrode Reactions	36
3.2.1	Definition of Electrodes and Electrochemical Half-Cells	36
3.2.2	Scientific Notation of Electrochemical Cells	37
3.2.3	Types of Electrodes	38
3.3	The Relative Electrode Potential and the Need for Reference Electrodes	40
3.3.1	Point of Reference for Electrode Potentials	42
3.3.2	Reference Electrodes Explained via the Water Analogy	45
	Questions	46
	References	47
4	Reaction Equations and Thermodynamics of Electrochemical Reactions	49
4.1	Introduction to Oxidation and Reduction Reactions and Thermodynamic Limits	49
4.2	How to Write and Balance Reaction Equations of (Bio)electrochemical Reactions	50
4.2.1	Reaction Equations for the Hydrogen Fuel Cell	51
4.2.2	Reaction Equations for a Microbial Electrolysis Cell	53
4.3	Thermodynamics of Electrochemical Conversions	57
4.3.1	Calculations Assuming Standard Conditions	57
4.3.2	The Effect of Actual Concentrations on Gibbs Free Energy Change	62
4.3.3	The Effect of Temperature on Gibbs Free Energy Change	65
	Questions	68
	References	68
5	Static Electrochemical Methods	69
5.1	Introduction to Static Electrochemical Methods	69
5.2	What Is a Three-Electrode Arrangement, a Potentiostat or Power Supply, and for What Are They Needed?	70
5.3	The Electrochemical Double Layer and Capacitive Current	74
5.4	Potentiometry, Amperometry, Coulometry, and Constant Current Measurements	78
5.5	Chronoamperometry	82
	Questions	87
	References	88
6	Electrochemical Kinetics	89
6.1	Introduction to Electrochemical Kinetics	89
6.2	Basics of Electrochemical Kinetics	90

6.3	Electrochemical Reversibility	91
6.4	Overpotentials	94
6.5	The Overpotential Due to Mass Transfer	98
6.6	Potential-Current Plots and Electrode Kinetics	101
6.7	The Butler–Volmer Equation	103
6.8	Tafel Equation and Tafel Plots	106
6.9	Electrocatalysis	108
	Questions	113
	References	114
7	Dynamic Electrochemical Methods	115
7.1	Introduction to Electrochemical Methods with Changing Electrode Potential	115
7.2	Voltammetry	117
7.3	Performing Dynamic Electrochemical Methods Using Potentiostats: Discriminating Capacitive and Faradaic Current	117
7.3.1	The Principles of Linear Sweep Voltammetry	120
7.4	Cyclic Voltammetry	123
7.4.1	General Considerations and Basic Data Analysis	123
7.4.2	Studying Biofilm Electrodes Using Cyclic Voltammetry	131
7.4.3	Experimental Design and Limits of Information from Data	134
7.5	Redox-Active Components in Microorganisms	136
7.6	Acquisition of Polarization and Power Curves Using Stepwise Chronoamperometry and Chronopotentiometry	139
7.7	Acquisition of Polarization Curves Using External Resistance	145
7.8	Electrochemical Impedance Spectroscopy	147
	Questions	152
	References	152
8	Electrochemical Analysis of Reactors	155
8.1	Introduction to Characterization of Microbial Electrochemical Cells	155
8.2	Mass and Electron Balances and Efficiency of Conversions	157
8.2.1	Establishing Balances for Mass and Electrons	157
8.2.2	Removal Efficiency	158
8.2.3	Coulombic Efficiency	159
8.3	Polarization and Power Curves: Analysis of Measured Data	161
8.4	Internal Resistance and Potential Losses	168
8.5	Energy Efficiency and Voltage Efficiency	174
8.6	Ionic Current and Transport Numbers	176
8.6.1	Ionic Current for the Specific Removal and Recovery of Ions	176
8.6.2	Ionic Current and pH Gradients	177
	Questions	178
	References	179

**9 Seizing the Beauty and Acknowledging the Complexity of
 Basic Electrochemistry for Biotechnology 181**

Appendix A Abbreviations 185

Appendix B Symbols with Definition and Unit 187

Appendix C Solutions to Exercises 193

Appendix D Tabulated Values 217

Index 219
