1	Introduction	1
1.1	Summary	1
1.2	Motivation and Scope	2
1.2.1	Experiments	3
1.2.2	Computer Simulations	3
1.2.3	Theory	4
1.2.4	Multi-Component Systems	5
1.3	Structure of the Thesis	6
1.3.1	Nomenclature	6
1.3.2	Overview of the Thesis	8
1.4	Non-Equilibrium Thermodynamics of a Surface	9
1.4.1	The Square Gradient Theory	9
1.4.2	Macroscopic Transport	11
	References	13
2	Equilibrium Square Gradient Model	17
2.1	Introduction	17
2.2	The Gradient Model	18
2.3	Gradient Model for the Mass Specific Variables	20
2.3.1	The Lagrange Method	20
2.3.2	Gibbs Relations	22
2.3.3	Equilibrium Surface	24
2.4	Gradient Model for the Densities (Per Unit of Volume)	26
2.5	Gradient Coefficients	29
2.5.1	Mass and Volume Specific Coefficients	29
2.5.2	Mixing Rules	29
2.6	Discussion and Conclusions	30
2.A	On the Ambiguity in the Specific Quantities	32
2.B	Interfacial Pressure	33
	References	35

3	Non-Equilibrium Continuous Description	37
3.1	Introduction	37
3.2	The Square Gradient Model	39
3.3	The Gibbs Relation	40
3.4	Homogeneous Thermodynamics of One-Fluid Mixture	41
3.4.1	Equation of State	42
3.4.2	Helmholtz Energy of a Mixture of Ideal Gases	42
3.4.3	Homogeneous Helmholtz Energy	44
3.5	Hydrodynamics of One-Fluid Mixture	45
3.5.1	The Energy Fluxes	46
3.6	Two-Dimensional Isotropy of the Surface	47
3.7	The Entropy Production	49
3.8	The Phenomenological Equations	51
3.8.1	The Force–Flux Relations	51
3.8.2	The Phenomenological Coefficients	53
3.9	Discussion and Conclusions	54
3.A	On the Extension of the Gibbs Relation to Non-Equilibrium	55
3.B	Two-Dimensional Isotropic Components in the 3D Tensorial Quantities	56
	References	59
4	Numerical Solution for the Binary Mixture	61
4.1	Introduction	61
4.2	Complete Set of Equations	62
4.2.1	Conservation Equations	62
4.2.2	Thermodynamic Equations	62
4.2.3	The Helmholtz Energy of a Homogeneous System	63
4.2.4	The Gradient Contribution	64
4.2.5	Phenomenological Equations	65
4.3	Solution Procedure	67
4.3.1	Equilibrium Profile	67
4.3.2	Non-Equilibrium Profile	69
4.4	Data Input	72
4.5	Results	73
4.5.1	Non-Equilibrium	74
4.6	Conclusions	83
	References	83
5	Local Equilibrium of the Gibbs Surface for the Two-Phase Binary Mixture	85
5.1	Introduction	85
5.2	Equilibrium Gibbs Surface	86
5.3	Calculating the Excess Densities	87
5.4	Surface Temperature and Chemical Potential Difference	89

5.4.1	Other Surface Quantities.	91
5.5	Defining Local Equilibrium of a Surface	91
5.6	Verification of Local Equilibrium	95
5.6.1	Surface Temperature and Chemical Potential Difference	96
5.6.2	The Non-Equilibrium Gibbs Surface	98
5.6.3	Equilibrium Tables	100
5.7	Discussion and Conclusions	102
5.8	Excesses' Errors	103
5.8.1	Gibbs Excesses' Relative Errors	104
5.8.2	Equilibrium Table Excesses' Relative Errors.	104
	References	107
6	From Continuous to Discontinuous Description.	109
6.1	Introduction.	109
6.2	Local Entropy Production	111
6.2.1	Gibbs–Duhem Equation	111
6.2.2	Entropy Balance	112
6.3	Excesses in Three-Dimensional Space	113
6.3.1	Definition of an Excess	113
6.3.2	Stationary State of a Surface.	114
6.4	Excess Entropy Production	116
6.5	Surface Transfer Coefficients	117
6.5.1	Gas- and Liquid-Side Transport Coefficients.	119
6.5.2	Mass and Molar Transport Coefficients	121
6.6	Conclusions.	122
6.A	On the Definition of an Excess Quantity.	122
6.B	Excess of a Gradient Function in Curvilinear Coordinates	123
	References	124
7	Surface Transfer Coefficients for the Binary Mixture	127
7.1	Introduction.	127
7.2	Two Component Mixture	127
7.3	Methods to Obtain Resistances	129
7.3.1	Perturbation Cell	129
7.3.2	Experiment-Like Procedure.	130
7.3.3	Comparison to Kinetic Theory	132
7.4	Results	132
7.4.1	Onsager Reciprocal Relations	133
7.4.2	Second Law Consistency	134
7.4.3	Gas- and Liquid-Coefficients	136
7.4.4	Comparison to Kinetic Theory	136
7.4.5	Temperature and Chemical Potential Difference Dependence	138

7.5	Discussion and Conclusions	140
	References	141
8	Integral Relations for the Surface Transfer Coefficients	143
8.1	Introduction.	143
8.2	The Entropy Production	144
8.2.1	Stationary States	144
8.2.2	Local Entropy Production.	144
8.2.3	Excess Entropy Production	146
8.3	Integral Relations.	146
8.4	Measurable Heat Fluxes	148
8.4.1	The Whole Surface	149
8.4.2	Local Resistivities	149
8.5	Results for the Two Component Mixture	151
8.5.1	Integral Relations	151
8.5.2	Numerical Data	153
8.6	Discussion and Conclusions	154
8.A	Local Resistivities	155
