Preface — V

Acknowledgments — VII

Notation — XI

I Forward to black-box software — 1

- 1 Formalization of scientific and engineering computations — **1**
- 2 Mathematical models in the continuum mechanics — **3**
- 3 Finite volume discretization — **6**
- 4 Smoothers — **7**
- 5 An introduction to the black-box solver — **11**
- 6 Segregated and coupled solvers for systems — **18**
- 7 Nonlinear two-grid algorithm — **25**
- 8 Summary — **35**

II Sequential robust multigrid technique — 37

- 1 Multiple coarse grid correction strategy — **37**
- 2 Analytic part of the technique — **38**
- 3 Computational part of the technique — **39**
- 3.1 Generation of the finest grid — **39**
- 3.2 Triple coarsening — **40**
- 3.3 Finite volume discretization on the multigrid structure — **44**
- 4 Multigrid cycle — **47**
- 5 1D numerical illustration — **49**
- 6 Computational work — **65**
- 7 Black-box optimization on the multigrid structure — **66**
- 8 Remarks on the index mapping — **69**
- 9 Summary — **73**

III Parallel robust multigrid technique — 74

- 1 Introduction to parallel RMT — **74**
- 2 Geometric parallelism — **77**
- 3 Algebraic parallelism — **82**
- 4 Parallel cycle for middle-thread parallelization — **84**
- 5 Parallel solution of time-dependent problems — **85**
- 6 Summary — **101**

IV Background in iterative methods — 103

- 1 Basic notation and definitions — **103**

2	Basic direct and iterative methods —	105
3	Computational grids —	109
4	Auxiliary space preconditioner —	118
5	Remarks on the smoothing and approximation property —	124

Conclusions — 127

Bibliography — 133

Index — 135
