

INTRODUCTION

Schemas in a Design Problem	7
The Problem of Building in Seismic Regions	8
The Reciprocity Between Thinking and Building	12
The Hyperobjectivity of Earthquakes	16
Six Stories in One Book	19

1 LIGHTNESS

1.1	Lightness, or the Subtraction of Weight	24
1.2	Precedents—From the Conservation of Material to Living Inside Frames	32
1.3	Contemporary Cases—Skeletonized and Super-Thin Structures	45
1.4	Future—Levitation and the Bearable Lightness of Architecture	64

2 QUICKNESS

2.1	Quickness, or the Maintenance of Readiness	74
2.2	Precedents—From the Fable to the Keynote	82
2.3	Contemporary Cases—Narratives of Material and Community	95
2.4	Future—Towards Open-Ended Narratives	116

3 EXACTITUDE

3.1	Exactitude, or the Need for Approximations	126
3.2	Precedents—From Convenient Analogies to Calculable Forms	134
3.3	Contemporary Cases—High-Tension Equilibrium and Funicular Configurations	146
3.4	Future—Self-Stabilizing Configurations and Non-Flat Surfaces	165

4 VISIBILITY

4.1	Visibility, or the Rendering of Problems	174
4.2	Precedents—The Expression of Necessary Structural Configurations	182
4.3	Contemporary Cases—Bracing as Pattern and as Space	193
4.4	Future—Beyond Orthogonal Configurations	212

5

MULTIPLICITY

5.1	Multiplicity, or the Curation of Diversity	222
5.2	Precedents—From Safety in Numbers to Curated Diversity	230
5.3	Contemporary Cases—The Division and Collage of Structures	243
5.4	Future—Finding the Right Scales and Dimensions of Safety	261

6

CONSISTENCY

6.1	Consistency, or the Assurance of Sameness	272
6.2	Precedents—From the Immortal Object to Hybrid Configurations	281
6.3	Contemporary Cases—Heavy Frameworks and Seismic Renovations	293
6.4	Future—What Persists and What Changes	313

CONCLUSION

Towards an Expanded Repertoire	323
From How We Think to How We Build	325
Design Options and How to Choose	332
A General Approach to Design Problems	335
