Volume 1

Foreword *xxi*

Preface *xxiii*

About the Editors *xxvii*

Part I Fundamentals 1

- 1 The Need for Stationary Energy Storage 3**
Anthony Price
 - 1.1 Power Systems 3
 - 1.1.1 The Role of Electricity in Energy Supply 3
 - 1.1.2 The Development of DC and AC Power Systems 4
 - 1.1.3 The Early Use of Energy Storage on Power Systems 4
 - 1.1.4 Centralised and Distributed Generation 4
 - 1.1.5 Power System Infrastructure 5
 - 1.1.6 Other Types of Electricity Generation and System Control 7
 - 1.2 The Need for Electricity Storage 8
 - 1.2.1 Operation of a Modern Power Network – The Requirement for Operational Stability 8
 - 1.2.2 Requirements for Storage and the Use of Alternative Technologies, such as Demand-Side Response, Interconnectors, and Flexible Generation 8
 - 1.2.3 Optimisation of Power Networks for Technical Performance, Economic Efficiency, and Sustainability – The Energy Trilemma 10
 - 1.3 Changes in Electricity Network Operation: Interconnected Systems, Microgrids, and Standalone Systems 12
 - 1.3.1 The Growth in Renewable Energy Generation 12
 - 1.3.2 The Overlap Between Stationary Storage and Transportable and Mobile Applications 12
 - 1.4 The Parameters for Storage: Short Term, Small Scale to Long Term, Long Duration, and Large-Scale Storage 14
 - 1.4.1 Stationary Storage Applications 14

1.5	The Need for Longer-Duration Energy Storage	16
1.5.1	Market Estimates	17
1.6	Energy Storage Types	18
1.6.1	Pumped-Hydro Energy Storage	18
1.6.2	Alternatives to Pumped-Hydro Storage	19
1.6.3	Compressed Air Energy Storage	19
1.6.4	The Hydrogen Cycle	20
1.7	Battery Energy Storage Technologies	20
1.7.1	Flow Batteries	20
1.7.2	Flow Battery Ancillary Systems	21
1.7.2.1	Advantages and Benefits	22
1.8	The Deployment of Flow Battery and Energy Storage	22
1.9	A Future Outlook	24
	References	26
2	History of Flow Batteries	29
	<i>Jens Noack, Maria Skyllas-Kazacos, Larry Thaller, Gerd Tomazic, Bjorn Jonshagen, and Patrick Morrissey</i>	
2.1	Early Developments (1884–1963)	29
2.2	Fe/Cr FBs (1974 – mid-2010s)	32
2.3	Zinc/Bromine FBs (1977–mid 2010s)	34
2.4	1977–1981	35
2.5	Vanadium-Based Flow Batteries (1980s–2010)	37
2.6	Regenesys Polysulphide/Bromide Flow Battery (1984–Early 2000s)	42
2.7	Other Flow-Battery Chemistries 2000–2020	44
2.8	Organic Flow Batteries	46
2.9	Advanced Flow-Battery Concepts	47
2.10	Perspective	47
	References	48
3	General Electrochemical Fundamentals of Batteries	53
	<i>Rudolf Holze</i>	
3.1	Introduction	53
3.2	Thermodynamics	55
3.3	Kinetics	61
3.4	Practical Aspects and Consequences	66
	Acknowledgments	66
	References	67
4	General Aspects and Fundamentals of Flow Batteries	69
	<i>Luis F. Arenas, Frank C. Walsh, and Carlos Ponce de León</i>	
4.1	Introduction	69
4.2	The Flow Battery	71

4.3	Main Components of a FB Energy Storage System	75
4.4	Advantages and Environmental Benefits	77
4.5	Types of FB	79
4.6	Fields of Application	84
4.7	Ideal Characteristics of a FB	85
4.8	Engineering Aspects of FBs	86
4.9	Fluid Flow Aspects of FBs	87
4.10	Typical Figures of Merit	90
4.11	Conclusions	92
	Acknowledgments	93
	Abbreviations	94
	List of Symbols and Subscripts	94
	Greek Letters	95
	References	95
5	Redox-mediated Processes	99
	<i>Danick Reynard, Mahdi Moghaddam, Cedrik Wiberg, Silver Sepp, Pekka Peljo, and Hubert H. Girault</i>	
5.1	Fundamental Theory on Redox-mediated Processes	99
5.2	Redox-mediated Processes: Various Applications for Flow Batteries	101
5.2.1	Dual-flow Circuit Flow Battery	101
5.2.2	Solid Boosters	106
5.2.2.1	Thermodynamics of Solid Boosters: Equilibrium	109
5.2.2.2	Kinetics of Solid Boosters	113
5.2.2.3	System Design	113
5.3	Conclusion	115
	References	116
6	Membranes for Flow Batteries	121
	<i>Giovanni Crivellaro, Chuanyu Sun, Gioele Pagot, Enrico Negro, Ketì Vezzù, Francesca Lorandi, and Vito Di Noto</i>	
6.1	Introduction	121
6.2	Membrane Characteristics	123
6.2.1	Ion-Exchange Capacity (IEC)	124
6.2.2	Water Uptake (WU), Swelling Ratio (SR), and Water Transport	125
6.2.3	Ionic Conductivity (σ)	126
6.2.4	Permselectivity of Chemical Species	128
6.2.5	Chemical Stability	129
6.2.6	Thermal and Mechanical Stability	130
6.2.7	Cost of the IEMs	130
6.3	Classification of Membranes	131
6.3.1	Cation-Exchange Membranes (CEMs)	132

6.3.1.1	Perfluorinated Membranes	132
6.3.1.2	Non-perfluorinated Membranes	134
6.3.2	Anion-Exchange Membranes (AEMs)	137
6.3.3	Amphoteric Ion-Exchange Membranes (AIEMs)	139
6.3.4	Hybrid Membranes (HMs)	140
6.3.4.1	Hybrid Inorganic–Organic IEMs	141
6.3.4.2	Organic Polymer Blends as IEMs	142
6.3.5	Porous Membranes	143
6.4	Conclusions	144
	References	146
7	Standards for Flow Batteries	155
	<i>Jens Noack</i>	
7.1	Introduction	155
7.2	A Definition of Flow Batteries	156
7.3	International Standards for Flow Batteries	159
7.3.1	Standards of the International Electrotechnical Commission (IEC)	160
7.3.2	Standards of the Institute of Electrical and Electronics Engineers	166
7.4	Other National and International Standards, as well as Other Documents	168
7.5	Chinese National Standards	171
7.6	Conclusions	174
	Abbreviations	174
	References	174
8	Safety Considerations of the Vanadium Flow Battery	175
	<i>Adam H. Whitehead</i>	
8.1	Regulatory Framework	175
8.2	Thermal Hazards	177
8.3	Chemical Hazards	178
8.4	Electrical Hazards	180
8.5	Other Considerations	187
8.6	Summary & Outlook	187
	References	188
9	A Student Workshop in Sustainable Energy Technology: The Principles and Practice of a Rechargeable Flow Battery	193
	<i>C.T. John Low, Carlos Ponce de León, Richard G.A. Wills, and Frank C. Walsh</i>	
9.1	Introduction	193
9.2	Laboratory Experiment	193
9.2.1	Chemicals	194
9.2.2	Materials for Construction	194

9.3	Results and Discussion	195
9.3.1	Preparation of the Flow Battery	195
9.3.2	Electrochemical Reactions in a Soluble Lead–Acid Flow Battery	196
9.3.3	Effect of Current Density on Cell Voltage	198
9.4	Assessment of Hazards	199
9.5	Teaching Assessment and Learning Outcomes	199
9.6	Conclusions	200
	Supplementary Materials	200
	Acknowledgments	200
	Appendix: Supplementary Information for Students	200
9.A	Chemicals and Materials for the Soluble Lead Flow Battery	200
9.B	Experimental Procedure	201
9.C	Types of Flow Battery	202
9.D	Components of Cell Voltage	202
9.E	Characteristics of a Flow Battery	204
9.F	The Efficiency of a Flow Battery	205
9.G	Nomenclature	205
9.H	Supplementary Materials for the Instructor	206
	References	209

Part II Characterization of Flow Batteries and Materials 213

10	Characterization Methods in Flow Batteries: A General Overview	215
	<i>Christina Roth and Marcus Gebhard</i>	
10.1	General Overview	215
10.1.1	Physicochemical Methods in General	215
10.1.2	Characterization Techniques for Redox-Flow Batteries	218
10.1.2.1	Physicochemical Characterization	218
10.1.2.2	Electrochemical Characterization	221
10.1.2.3	General Observations	224
10.1.3	Further Outline of Part II	224
	Acknowledgments	225
	References	225
11	Electrochemical Methods	229
	<i>Jonathan Schneider, Tim Tichter, and Christina Roth</i>	
11.1	Fundamental Definitions	229
11.2	Cyclic Voltammetry	231

11.2.1	Measuring Cyclic Voltammetry	231
11.2.2	Interpreting CV and LSV at Planar Electrodes – The Randles–Ševčík Relations	233
11.2.3	Strategies for Simulating Cyclic Voltammetry	235
11.2.4	The Diffusion Domain Approximation Approach for Felt Electrodes	237
11.2.5	The Real-Space Simulation Approach	240
11.2.6	Remarks on Cyclic Voltammetry	242
11.3	Electrochemical Impedance Spectroscopy	245
11.3.1	Principles and Advantages of Electrochemical Impedance Spectroscopy	245
11.3.2	Interpreting Electrochemical Impedance Spectroscopy	246
11.3.3	Impedance of Macrohomogeneous Porous Electrodes – The Paasch Model	248
11.3.4	The Normalization Method	248
11.3.5	The Distribution of Relaxation Times (DRT) Analysis	249
11.3.6	Characteristics of a “Good Impedance” – The Kramers–Kronig Relations	251
11.3.7	Advanced Electroanalytical Techniques	252
11.3.7.1	Hydrodynamic Voltammetry – The Rotating Ring-Disc Electrode (RRDE)	253
11.3.7.2	Alternating Current Cyclic Voltammetry (ACCV)	254
	References	255
12	Radiography and Tomography	263
	<i>Roswitha Zeis</i>	
12.1	Working Principle	263
12.1.1	Morphology of Electrode Materials	263
12.1.2	Visualizing the Flow and Electrolyte Distribution in the Porous Electrode	267
12.1.2.1	Injection of Electrolyte Into the Carbon Electrode (No Potential Control)	268
12.1.2.2	Electrolyte Flow in the Carbon Electrode (Cell Potential Applied)	274
12.2	Outlook	276
	References	276
13	Characterization of Carbon Materials	281
	<i>Michael Bron, Julia Melke, and Matthias Steimecke</i>	
13.1	Introduction	281
13.2	Structure of Carbon Materials	283

13.2.1	Raman Spectroscopy	283
13.3	X-ray Powder Diffraction (XRD)	286
13.4	Surface Chemistry of Carbon Materials	288
13.5	Functionalization of Carbons	288
13.5.1	Thermal Methods	290
13.5.1.1	TPD	291
13.5.1.2	TPR/TPO	292
13.5.1.3	TG/TGA	292
13.6	X-ray Photoelectron Spectroscopy (XPS)	293
13.7	Infrared Spectroscopy	296
13.8	Imaging Techniques	297
13.9	Surface Area Determination and Porosity	298
13.10	Conclusion and Perspectives	299
	References	300
14	Characterization of Membranes for Flow Batteries	307
	<i>Jochen Kerres, Nico Mans, and Henning Krieg</i>	
14.1	Introduction	307
14.2	Ex situ Characterization Methods for Membranes	307
14.2.1	Ion-Exchange Capacity of Ionomer Membranes	307
14.2.2	Ion Conductivity of Ionogenic Groups in Membranes	310
14.2.3	Ion Permeability of the Ion-Exchange Membranes	311
14.2.4	Membrane Weight Loss	311
14.2.5	Molecular Weight (Degradation) of Ionomers and Ionomer Membranes	313
14.2.6	Determination of the Thermal Stability of the Membranes	314
14.2.7	Spectroscopical Membrane Characterization	315
14.2.8	Determination of Mechanical Membrane Properties	317
14.2.9	Microscopical Membrane Characterization	317
14.2.10	Water Transfer Behavior	318
14.3	In situ Characterization Methods for Membranes	319
14.3.1	Charge/Discharge Cycles	319
14.3.1.1	Current, Voltage, and Energy Efficiency	320
14.3.1.2	Discharge Capacity and Capacity Retention	324
14.3.2	Open-Circuit Voltage	326
14.3.3	Electrochemical Impedance Spectroscopy (EIS)	327
14.3.4	In situ Membrane Permeability Estimation	328
14.4	Summary	329
	References	329

Part III Modeling and Simulation 333

15 Quantum Mechanical Modeling of Flow Battery

Materials 335

Piotr de Silva

15.1 Introduction 335

15.2 Fundamental Concepts of Molecular Quantum Mechanics 337

15.3 Density Functional Theory 339

15.4 Computational Electrochemistry at the Atomistic Scale 343

15.5 Applications to FB Materials 348

References 351

16 Mesoscale Modeling and Simulation for Flow Batteries 355

Jia Yu and Alejandro A. Franco

16.1 Mesoscale Modeling Introduction 355

16.2 Mesoscale Modeling of Electrochemical Kinetics 356

16.2.1 Electron Transfer Process 356

16.3 Mesoscale Modeling of Electrified Interfaces: Monte Carlo Methods 360

16.3.1 Kinetic Monte Carlo Method 360

16.3.1.1 Methodology of Kinetic Monte Carlo Method 360

16.3.1.2 KMC Applications in FB and Porous Electrode Systems 361

16.3.2 Grand Canonical Monte Carlo Method 362

16.4 Mesoscale Modeling of Transport: Dissipative Particles Dynamics and Discrete Element Method 364

16.4.1 Methodology of Dissipative Particles Dynamics 364

16.4.2 DPD Applications to FBs 366

16.4.3 Discrete Element Method 366

16.5 Lattice Boltzmann Method 367

16.5.1 Methodology of Lattice Boltzmann Method 367

16.5.2 LBM Application to FBs 369

16.6 Conclusion and Perspectives 372

References 373

17 Continuum Modelling and Simulation of Flow Batteries 379

Jakub K. Włodarczyk, Gaël Mourouga, Roman P. Schärer, and Jürgen O. Schumacher

17.1 Introduction 379

17.2 An Engineer's Approach to Cell-scale Modelling 383

17.2.1 Integrating Batteries in Electric Grids 383

17.2.2 Battery Performance Models 383

17.2.2.1 Ohmic Resistance 385

17.2.2.2 Influence of the State of Charge 385

17.2.2.3	Overpotentials and Mass Transport Problems	385
17.2.3	System Efficiency Modelling	387
17.2.3.1	Pumping Losses	387
17.2.3.2	Coulombic Efficiency	387
17.2.3.3	Round-trip Efficiency	388
17.2.4	Lifetime Models	388
17.2.4.1	Practical and Theoretical Capacity	388
17.2.4.2	Capacity Fade Through Membrane Transport	389
17.2.4.3	Degradation	390
17.2.5	Towards Flow-Battery Fundamentals	390
17.3	Fundamentals of Flow Batteries: A Thermodynamic Perspective	390
17.3.1	Modelling the Open-Circuit Voltage	391
	Example 17.1: OCP Predictions in Hydrogen-Bromine System	393
17.3.2	Nonequilibrium Thermodynamics	396
17.3.2.1	General Balance Laws	396
17.3.2.2	Constitutive Relations	397
17.3.2.3	Concentrated Electrolyte Solutions	397
17.3.2.4	Generalised Nernst–Planck Models	398
17.3.2.5	Transport Through Membranes	399
17.4	Multiscale Modelling of Porous Electrodes	400
17.4.1	Electrochemical Interface Models	400
17.4.2	Porous Electrode Modelling	401
17.5	Discussion and Conclusions	403
	References	404
18	Pore-scale Modeling of Flow Batteries	413
	<i>Amadeus Wolf, Susanne Kespe, and Hermann Nirschl</i>	
	List of Symbols	413
18.1	Introduction	414
18.2	Microstructure Characterization	415
18.2.1	Reconstruction of Experimentally-Gained Images	416
18.2.2	Stochastic Microstructure Generation	418
18.2.3	Structured Electrodes	419
18.3	Theory	419
18.3.1	Fluid Transport	420
18.3.2	Species Transport	420
18.3.3	Electrochemical Reaction	421
18.3.4	Charge Transport	422
18.3.5	Boundary and Initial Conditions	423
18.3.5.1	Boundary Conditions for Fluid Transport	423
18.3.5.2	Boundary Conditions for Species Transport	423
18.3.5.3	Boundary Conditions for Charge Transport	423

18.3.6	Computational Details	424
18.4	Numerical Methods	424
18.4.1	Finite Volume Method	424
18.4.2	Taylor–Galerkin Finite Element Methods	425
18.4.3	Lattice Boltzmann Method	425
18.5	Validation of the Numerical Model	425
18.6	Simulation Study	426
18.6.1	Numerical Investigations on Structured Electrodes	426
18.6.1.1	Effect of Different Initial Concentrations	427
18.6.1.2	Effect of Electrode Active Surface Area	427
18.6.2	Numerical Investigations on Reconstructed Microstructure	430
18.7	Pore-scale Modeling Examples	434
18.7.1	Pore Network Models	434
18.7.2	Multiphase Reactive Transport Model	435
18.7.3	Model for Determination of the Mass Transfer Coefficient	436
18.7.4	Three-dimensional Pore-scale Lattice Boltzmann Model	437
18.8	Conclusion	437
	Acknowledgment	438
	References	439

19 Dynamic Modelling of Vanadium Flow Batteries for System Monitoring and Control 443

Jie Bao and Yitao Yan

19.1	Dynamic Modelling of VFB	444
19.1.1	Dynamic Stack Mass Balance Model	444
19.1.1.1	Mass Balance During Normal Operation	445
19.1.1.2	Self-discharge During Standby	448
19.1.2	Dynamic Stack Thermal Model	450
19.1.3	Simulation Study on VFB	452
19.2	Battery System Monitoring and Control	456
19.2.1	Electrolyte Flowrate Control	457
19.2.2	Power Flow Control	458
	Nomenclature	459
	References	460

20 Techno-economic Modelling and Evaluation of Flow Batteries 463

Christine Minke and Thomas Turek

20.1	Introduction	463
20.2	Goal and Scope Definition of Techno-economic Assessment	463
20.2.1	Rethinking Goal Definition	464
20.2.2	Rethinking Scope Definition	466

20.2.2.1	Technical System Definition	466
20.2.2.2	Economic System Definition	468
20.3	Methodology of Techno-economic Modelling	468
20.3.1	Multi-level Modelling of FB	468
20.3.1.1	Electrochemical Level	469
20.3.1.2	Component Level	470
20.3.1.3	System-Level	471
20.3.2	Economic Modelling Methods	472
20.3.2.1	Capital Costs	472
20.3.2.2	Total Cost of Storage	473
20.4	Data Basis and Quality	474
20.4.1	Input Data	475
20.4.2	Primary and Secondary Data	475
20.4.3	Uncertainty	476
20.5	Meta-analysis of Techno-economic Modelling and Evaluation Studies	476
20.5.1	Review and Classification of Techno-economic Modelling Approaches	477
20.5.1.1	Goal and Scope Definitions in Literature	477
20.5.1.2	Techno-economic Modelling and Data in Literature	478
20.5.2	Results of Techno-economic Evaluation in Literature	480
20.5.2.1	Cost Structure of VFB	480
20.5.2.2	Capital Costs of VFB	480
20.5.2.3	LCOS of VFB	481
20.6	Conclusions	482
	References	483
21	Machine Learning for FB Electrolyte Screening	487
