Preface	v
1 Scheduling Models	1
1.1 The RCPSP and some Generalizations	1
1.2 Machine Scheduling	14
1.2.1 Single-machine scheduling	14
1.2.2 Parallel machine scheduling	14
1.2.3 Shop scheduling	15
1.2.4 Multi-processor task scheduling	17
1.3 Applications of the RCPSP	18
1.4 Reference Notes	28
2 Algorithms and Complexity	29
2.1 Easy and Hard Problems	29
2.1.1 Polynomially solvable problems	30
2.1.2 NP-hard problems	30
2.2 Shortest Path Algorithms	35
2.2.1 Dijkstra's algorithm	35
2.2.2 Label-correcting algorithms	39
2.2.3 Detection of negative cycles	42
2.2.4 Floyd-Warshall algorithm	42
2.3 Linear Programming	44
2.3.1 Linear programs and the simplex algorithm	44
2.3.2 Duality	52
2.3.3 The revised simplex method	56
2.3.4 Delayed column generation techniques	58
2.4 Lagrangian Relaxation	62
	vii

2.5	Network Flow Algorithms	65
2.5.1	The minimum cost flow problem	65
2.5.2	The residual network and decomposition of flows	67
2.5.3	The maximum flow problem	72
2.5.4	Flows and cuts	73
2.5.5	Algorithms for the maximum flow problem	76
2.5.6	Algorithms for the minimum cost flow problem	80
2.6	Branch-and-Bound Algorithms	82
2.6.1	Basic concepts	82
2.6.2	The knapsack problem	84
2.6.3	Integer linear programs	88
2.7	Constraint Programming	91
2.8	The Satisfiability Problem (SAT)	97
2.9	Dynamic Programming	100
2.10	Heuristic Methods	103
2.10.1	Local search algorithms	103
2.10.2	Genetic algorithms	110
2.10.3	Ant colony optimization	113
2.11	Reference Notes	115
3	Resource-Constrained Project Scheduling	117
3.1	Basics	117
3.1.1	Temporal analysis	117
3.1.2	A classification of schedules	119
3.1.3	Reference notes	121
3.2	Heuristic Methods	122
3.2.1	Schedule generation schemes	122
3.2.2	Priority-based heuristics	128
3.2.3	Local search algorithms	130
3.2.4	Genetic algorithms	132
3.2.5	Ant colony optimization	136
3.2.6	Heuristics for the multi-mode case	137
3.2.7	Reference notes	137
3.3	MIP Formulations of the RCPSP	138

3.3.1	Discrete time formulations	138
3.3.2	Continuous time formulations	140
3.3.3	Event-based formulations	142
3.3.4	Project scheduling with labor constraints	148
3.3.5	Reference notes	150
3.4	A SAT Formulation of the RCPSP	150
3.5	General Objective Functions for Problems without Resource Constraints	151
3.5.1	Regular functions	152
3.5.2	Linear functions	152
3.5.3	Convex piecewise linear functions	154
3.5.4	General sum functions	157
3.5.5	Reference notes	161
3.6	Constraint Propagation	162
3.6.1	Basic relations	162
3.6.2	Start-start distance matrix	163
3.6.3	Symmetric triples and extensions	165
3.6.4	Disjunctive sets	168
3.6.5	Cumulative resources	186
3.6.6	Constraint propagation for the multi-mode case	186
3.6.7	Reference notes	192
3.7	Lower Bounds	193
3.7.1	Combinatorial constructive lower bounds	194
3.7.2	Lower bounds based on Lagrangian relaxation	196
3.7.3	An LP-based constructive lower bound	197
3.7.4	An LP-based destructive method	203
3.7.5	A destructive method for the multi-mode case	211
3.7.6	Reference notes	216
3.8	Branch-and-Bound Algorithms	217
3.8.1	An algorithm based on precedence trees	217
3.8.2	An algorithm based on extension alternatives	221
3.8.3	An algorithm based on delaying alternatives	225
3.8.4	An algorithm based on schedule schemes	231
3.8.5	Algorithms for the multi-mode case	237
3.8.6	Reference notes	238

4	Complex Job-Shop Scheduling	239
4.1	The Job-Shop Problem	239
4.1.1	Problem formulation	239
4.1.2	The disjunctive graph model	240
4.2	Heuristic Methods	244
4.3	Branch-and-Bound Algorithms	252
4.4	Generalizations	253
4.5	Job-Shop Problems with Flexible Machines	259
4.5.1	Problem formulation	259
4.5.2	Heuristic methods	260
4.6	Job-Shop Problems with Transport Robots	267
4.6.1	Problem formulation	267
4.6.2	Problems without transportation conflicts	268
4.6.3	Problems with transportation conflicts	271
4.6.4	Constraint propagation	279
4.6.5	Lower bounds	285
4.6.6	Heuristic methods	296
4.7	Job-Shop Problems with Limited Buffers	300
4.7.1	Problem formulation	300
4.7.2	Representation of solutions	301
4.7.3	Flow-shop problems with intermediate buffers	306
4.7.4	Job-shop problems with pairwise buffers	308
4.7.5	Job-shop problems with output buffers	308
4.7.6	Job-shop problems with input buffers	314
4.7.7	Job-shop problems with job-dependent buffers	315
4.8	Reference Notes	316
	Bibliography	319
	Index	335
