

Contents

1	Electronic Transport in Solids	1
1.1	Simple Phenomenological Ideas	1
1.1.1	The Drude Model for the Static Conductivity of Metals	1
1.1.2	Drude Model for Metallic Conduction in a Magnetic Field	3
1.1.3	Two Types of Charge Carriers, Magnetoresistance	6
1.1.4	Phenomenological Theory of Thermal Conductivity	8
1.2	Relations Between Transport Coefficients	10
1.3	Boltzmann Equation and Relaxation Time Approximation	14
1.4	Resistance of Metals by Scattering at Defects	21
1.5	Resistance of Metals by Scattering at Phonons	24
1.6	Resistance of Metals by Electron-Electron Scattering	30
1.7	Scattering at Magnetic Impurities: The Kondo Effect	33
1.8	Temperature Dependence of the Resistance of Semiconductors	41
1.9	Linear Response Theory	46
1.10	Electric Conductivity in Linear Response Theory, Kubo Formula	51
1.11	Impurity Scattering in the Kubo Formalism	59
1.12	Landauer Formula for the Resistance of One-Dimensional Systems	65
1.13	Further on Transport in Solids	68
1.14	Problems for Chap. 1	69
2	Optical (or Dielectric) Properties of Solids	73
2.1	Macroscopic Description, Frequency-Dependent Dielectric Constant and Refractive Index	73
2.2	Simple Microscopic Models, Drude and Relaxation Time Treatment	78
2.2.1	Reflection Coefficient of Metals in the Drude Model	78
2.2.2	Boltzmann Equation in Relaxation Time Approximation, Anomalous Skin Effect	80

2.3	Microscopic Theory of the Frequency-Dependent Dielectric Constant	84
2.4	Optical Properties of Semiconductors	90
2.4.1	Dipole Coupling to the Electromagnetic (Optical) Field	90
2.4.2	Two-Level Systems	94
2.4.3	The Semiconductor Bloch Equations.	96
2.5	Polaritons	102
2.5.1	Quantization of the Electromagnetic Field	103
2.5.2	Electrons in Interaction with the Quantized Radiation Field.	105
2.5.3	The Exciton-Polariton	107
2.6	The Jaynes-Cummings Model	109
2.7	Problems for Chap. 2	114
3	Deviations from the Ideal, Three-Dimensional Crystal Structure	119
3.1	Surfaces	121
3.2	Defects	126
3.3	Disordered Systems	130
3.3.1	The Coherent Potential Approximation (CPA)	133
3.3.2	Localization	137
3.4	Inhomogeneous Semiconductor Systems	140
3.4.1	p-n Junction Between Differently Doped Intrinsic Semiconductors	140
3.4.2	Semiconductor Heterostructures	142
3.5	Realization of Quasi-Two-Dimensional Electron Systems by Means of Heterostructures	144
3.5.1	Metal-Oxide-Semiconductor Field Effect Transistor (MOSFET).	144
3.5.2	Semiconductor Heterostructures	145
3.6	Quantum Dots	146
3.7	Two-Dimensional Crystals.	152
3.8	Problems for Chap. 3	156
4	Solids in an External Magnetic Field	159
4.1	Coupling of Magnetic Fields, Diamagnetism and Paramagnetism	159
4.2	Paramagnetism of Localized Magnetic Moments	165
4.3	Pauli Paramagnetism of Conduction Electrons	167
4.4	Landau Diamagnetism of Free Electrons.	169
4.5	The De-Haas-van-Alphen Effect	174
4.6	The Integer Quantum Hall Effect.	179
4.7	The Fractional Quantum Hall Effect (FQHE)	186

4.8	Overview of Other Effects that can be Observed in a Strong Magnetic Field	189
4.9	Problems for Chap. 4	191
5	Superconductivity	197
5.1	Compilation of the Most Important Experimental Findings	197
5.1.1	Meißner Effect	199
5.1.2	Critical Magnetic Field	199
5.1.3	Type-II Superconductor	201
5.1.4	Entropy and Specific Heat	201
5.2	Attractive Electron-electron Interaction Through the Electron-phonon Mechanism	204
5.3	Cooper Pairs	208
5.4	BCS Theory	212
5.5	Current-carrying State in BCS Theory	222
5.6	Electrodynamics of Superconductors, London Equations	225
5.7	Ginzburg-Landau Theory	229
5.8	Tunnel Effects with Superconductors	238
5.8.1	One-electron Tunneling	238
5.8.2	Tunneling of Cooper Pairs, Josephson Effect	240
5.9	Overview of Further Aspects of Superconductivity Theory	243
5.10	Problems for Chap. 5	250
6	Collective Magnetism	253
6.1	Magnetic Dipole-Dipole Interaction	253
6.2	The Exchange Interaction	254
6.3	The sd-Model for the Coupling of Local Magnetic Moments to Conduction Electrons	258
6.4	Indirect Exchange Interaction mediated by Conduction Electrons, RKKY Interaction	260
6.5	The Heisenberg Model and Related Lattice Models for Collective Magnetism	265
6.6	Mean Field Approximation for the Heisenberg Model	268
6.6.1	MFA for the Ferromagnetic Heisenberg Model	270
6.6.2	MFA for the Antiferromagnetic Heisenberg Model	277
6.6.3	Advantages and Disadvantages of the Mean Field Approximation	280
6.7	Excitations in the Heisenberg Model, spin Waves (Magnons), Holstein-Primakoff Transformation	281
6.8	The Mermin-Wagner Theorem	287
6.9	Ising Model, Critical Indices, Monte Carlo Methods	291
6.9.1	Ising Model	291
6.9.2	Mean Field Approximation	291
6.9.3	Exact Solution in One Dimension	292

6.9.4	Exact Results in Two Dimensions	295
6.9.5	Results in Three Dimensions, Monte Carlo Methods	296
6.10	Band or Itinerant Magnetism	300
6.11	The Giant Magnetoresistance Effect	304
6.12	Hubbard Model and Antiferromagnetic Heisenberg Model	309
6.13	Problems for Chap. 6	314
7	Solutions to the Exercise Problems	321
7.1	Solution of the Problems for Chap. 1.	321
7.2	Solution of the Problems for Chap. 2.	332
7.3	Solution of the Problems for Chap. 3.	343
7.4	Solution of the Problems for Chap. 4.	353
7.5	Solution of the Problems for Chap. 5.	360
7.6	Solution of the Problems for Chap. 6.	365
