

Table of Contents

1	Introduction	1
I	Foundations of Hyperbolic Problems and Numerical Methods	7
2	Hyperbolic Conservation Laws	9
2.1	Basic Definitions and Notations	9
2.2	Weak Solutions	14
2.3	The Concept of Entropies	21
2.4	Model Problems	29
3	Numerical Schemes for Hyperbolic Problems	35
3.1	Finite Difference Methods	36
3.2	Finite Volume Schemes	62
3.3	Finite Element Based Schemes	70
3.4	Time Integration Methods	119
II	Recent Progresses	133
4	Long-time Error Behavior of Discontinuous Galerkin and Flux Reconstruction	135
4.1	Error Boundedness of Flux Reconstruction	138
4.2	Error Boundedness of DG Methods with Variable Coefficients.	163
5	Uncertainty Quantification for Burgers' Equation	195
5.1	Generalized Polynomial Chaos Method	196

5.2	Stability in the Semidiscrete Setting	200
5.3	Construction of Numerical Fluxes	207
5.4	Numerical Experiments	214
6	Artificial Viscosity for SBP-FR Methods and the Construction of Fully Discrete Stable Schemes	231
6.1	Artificial Dissipation / Spectral Viscosity	232
6.2	The Connections and Applications of Modal Filters	247
6.3	Construction of Fully Discrete Stable Schemes	261
6.4	Comparison Between an Explicit Method with Modal Filtering and the Application of an Implicit Method	274
7	New Stable Discontinuous Galerkin Methods on Equidistant and Scattered Points	277
7.1	Discrete Least Squares Approximations and Quadrature Rules	278
7.2	A DG Method on Equidistant and Scattered Points	283
7.3	Conservation and L^2 Stability	286
7.4	Numerical Results	289
8	Construction of Entropy Conservative Flux Reconstruction Schemes on Arbitrary Meshes	299
8.1	Flux Reconstruction Approach on Triangles	300
8.2	Connection between Flux Reconstruction and Residual Distribution	304
8.3	Entropy Conservative Flux Reconstruction Schemes	307
9	Analysis, Re-interpretation and Extension of Entropy Correction Terms	315
9.1	Entropy Correction Term in the SBP-SAT Framework	315
9.2	Generalizations	323
9.3	Numerical Examples	328
10	Analysis of SBP-SAT Stabilisation for Finite Element Methods	341
10.1	SATs in Continuous Galerkin Framework	343
10.2	Estimation of the SAT-Boundary Operator	349
10.3	Investigation of the Boundary Operator - Entropy Stability	355
10.4	Numerical Simulations	359

11	Arbitrary High-order, Conservative and Positivity Preserving Patankar-type Deferred Correction Schemes	381
11.1	Production–Destruction Systems	383
11.2	Modified Patankar Deferred Correction Schemes	387
11.3	Numerical Experiments	403
12	Summary & Outlook	411
III	Attachments	415
13	Appendix	417
13.1	Foundations in Analysis	418
13.2	Approximation Results	420
13.3	Uncertainty Quantification	422
13.4	Legendre Polynomials	431
13.5	Modal Filtering in Runge-Kutta Methods	434
13.6	Raviart-Thomas Like Elements on Polygons	436
13.7	Transformation Results for Residual Distribution to Flux Reconstruction	439
13.8	Numerical Fluxes for the Euler Equations	440
13.9	Applications of the Optimization Approach to Grid Refinement and Coarsening	441
13.10	Algorithms in mPDeC	444
	Bibliography	447
	Index	481
