

Contents

A Few Words of Thanks	<i>ix</i>		
Preface	<i>xi</i>		
1 The Technology of Malting	1		
1.1 Malting Barley	1		
1.1.1 The Morphology of Barley	2		
1.1.2 The Chemical Composition of Barley	2		
1.1.3 Determining and Evaluating the Properties of Barley	6		
1.2 Preparing Barley for Malting	9		
1.2.1 Receiving Barley in Bulk	9		
1.2.2 Conveyor Systems	9		
1.2.3 Cleaning and Sorting Barley	10		
1.2.4 Preparing and Storing Barley	13		
1.2.5 Artificial Drying of Barley	16		
1.2.6 Plant Diseases and Animal Pests Affecting Barley	18		
1.2.7 Changes in the Weight of Barley During Storage	19		
1.3 Steeping the Barley	19		
1.3.1 Moisture Uptake in the Barley Kernel	19		
1.3.2 Supplying Oxygen to the Steeping Grain	20		
1.3.3 Cleaning the Barley	21		
1.3.4 Water Consumption	21		
1.3.5 Steeping Equipment	22		
1.3.6 Steeping Technology	25		
1.4 Germination	28		
1.4.1 The Theory of Germination	28		
1.4.2 The Practice of Germination	36		
1.5 Various Malting Systems	41		
1.5.1 Floor Malting	41		
1.5.2 Pneumatic Malting Systems	45		
1.5.3 Germination Vessels in Pneumatic Malting Systems	49		
1.5.4 The Finished Green Malt	65		
1.6 Kilning the Green Malt	66		
1.6.1 The Processes Involved in Kilning	66		
1.6.2 Kilns	72		
1.6.3 Kilning Techniques	79		
1.6.4 Monitoring and Automating Kilning – Kiln Maintenance	87		
1.6.5 Energy-Saving Measures	88		
1.6.6 Additional Tasks Associated with Kilning	89		
1.6.7 Handling of Malt After Kilning	90		
1.6.8 Storing Malt and Maintaining Malt Stores	91		
1.7 Malting Losses	92		
1.7.1 Losses During Steeping	93		
1.7.2 Losses During Respiration and Germination	93		
1.7.3 Calculating Malting Losses	94		
1.8 The Properties of Malt	95		
1.8.1 External Characteristics	95		
1.8.2 Mechanical Analysis	95		
1.8.3 Physico-Chemical Analysis	96		
1.9 Malt from Other Grains	98		
1.9.1 Wheat Malt	98		
1.9.2 Malt from Alternative Cereals	100		
1.9.3 Pseudocereals	103		
1.9.4 Specialty Malts	103		
1.9.5 Micromalting	106		
2 The Technology of Wort Production	109		
2.1 Raw Materials for the Brewing Process	109		
2.1.1 Malt	109		
2.1.2 Adjuncts: Alternatives to Malt	109		
2.1.3 Brewing Liquor	111		
2.1.4 Hops	124		
2.1.5 Adding Hops to the Wort	139		
2.2 Milling the Malt	148		
2.2.1 Monitoring Grist Quality	150		
2.2.2 Mill Designs	150		
2.2.3 Properties and Composition of the Grist	158		
2.2.4 The Arrangement of the Milling Area	159		
2.3 Wort Production	159		
2.3.1 The Theory of Mashing	159		
2.3.2 Mashing Techniques	168		
2.3.3 Mashing Regimes	174		
2.3.4 Particular Issues with Mashing	185		
2.3.5 Monitoring the Mashing Process	186		
2.4 Extracting the Wort (Lautering)	188		
2.4.1 Operations During Lautering	188		
2.4.2 The Lauter Tun	189		
2.4.3 The Lautering Process with a Lauter Tun	192		
2.4.4 Lautering with a Conventional Mash Filter	202		
2.4.5 Membrane Compression Filters	203		
2.4.6 The Thin-bed Filter	205		

2.4.7	A Comparison of Thin-bed Mash Filtration and the Modern Lauter Tun	207	3.1.1	Yeast Morphology	263
2.4.8	The Strainmaster	207	3.1.2	The Chemical Composition of Yeast	264
2.4.9	Continuous Lautering Methods	208	3.1.3	Yeast Enzymes	264
2.4.10	The Wort Collection Vessel	209	3.1.4	Yeast Reproduction	265
2.5	Boiling and Hopping the Wort	209	3.1.5	Yeast Genetics	266
2.5.1	Wort Kettles	210	3.1.6	Genetic Manipulation of Yeast	266
2.5.2	Physical Processes During Wort Boiling	215	3.1.7	Yeast Autolysis	268
2.5.3	Coagulation of Protein	216	3.2	Yeast Metabolism	268
2.5.4	Hopping the Wort	219	3.2.1	Carbohydrate Metabolism	269
2.5.5	Aroma Compounds in Wort	226	3.2.2	Protein Metabolism	271
2.5.6	Technical and Energy Aspects of Modern Wort Boiling Systems	229	3.2.3	Lipid Metabolism	272
2.5.7	Casting Out the Wort	236	3.2.4	Mineral Metabolism	273
2.5.8	The Cast-out Wort	237	3.2.5	Vitamins	274
2.5.9	Cleaning the Brewhouse Equipment	237	3.2.6	Metabolites and Their Significance for Beer Quality	274
2.5.10	Automating the Wort Boiling Process	239	3.3	Bottom-fermenting Yeast in Brewing Operations	279
2.5.11	Options for Recovering Residual Extract	239	3.3.1	Yeast Strain Selection	279
2.5.12	Spent Grain	241	3.3.2	Culturing Pure Strains of Brewing Yeasts	279
2.5.13	Safety and Consistency in the Brewhouse Production	241	3.3.3	Yeast Degeneration and Loss of Typical Characteristics	281
2.6	Brewhouse Yield	242	3.3.4	Harvesting Yeast	282
2.6.1	Calculation of Brewhouse Yield	242	3.3.5	Cleaning the Yeast	283
2.6.2	Assessing Brewhouse Yield	244	3.3.6	Yeast Storage	284
2.6.3	Conclusions on the Topic of Brewhouse Yield	246	3.3.7	Shipping Yeast – Dry Yeast	285
2.7	Wort Chilling and Elimination of Break Material	246	3.3.8	The Physiological Condition of the Yeast	285
2.7.1	Chilling the Wort	247	3.4	Beer Production with Bottom-fermenting Yeast	286
2.7.2	Oxygen Uptake in the Wort	247	3.4.1	Fermentation Rooms or Cellars	286
2.7.3	Elimination of Hot and Cold Break Material	247	3.4.2	Fermentation Vessels	287
2.7.4	Other Processes	249	3.4.3	Pitching the Yeast	294
2.7.5	Wort Chilling and Cold Wort Handling	249	3.4.4	Conducting Fermentation	297
2.7.6	Operations with a Coolship and a Baudelot (Falling Film) Chiller or a Closed Chiller	249	3.4.5	Primary Fermentation	298
2.7.7	Closed Wort Chilling Systems	251	3.4.6	Degree of Attenuation	301
2.8	Cold Wort Yield	260	3.4.7	Maturation Levels of the Green Beer	304
2.8.1	Data Collected for Cold Wort Yield	260	3.4.8	Changes in the Wort During Fermentation	304
2.8.2	Calculation of Cold Wort Yield	260	3.4.9	Recovery of Carbon Dioxide Produced During Fermentation	307
2.8.3	Overall Yield in Wort Production (Overall Brewhouse Yield – OBY)	261	3.5	Maturation and Lagering	309
3	The Technology of Fermentation	263	3.5.1	The Lager Cellar	310
3.1	Brewing Yeast	263	3.5.2	Lager Vessels	311
			3.5.3	The Maturation Process	312
			3.6	Modern Fermentation and Lagering Methods in Beer Production	321
			3.6.1	Methods of Operation for Fermenting in Tanks and Larger Vessels	321
			3.6.2	Utilization of Intermediate Storage Tanks and Implementation of a Green Beer Centrifuge	326

3.6.3	Methods for Accelerating Fermentation and Maturation 327	5.3.5	Capping the Bottles 383
3.6.4	Continuous Fermentation Processes 335	5.3.6	Oxygen Uptake During Bottling 383
3.6.5	Classic CCTs Employed in a Continuous-flow Process 336	5.4	"Sterile Filling" and the Pasteurization of Beer 387
3.6.6	Hopping Beer on the Cold Side 336	5.4.1	"Sterile Filling" 387
		5.4.2	Pasteurization of Beer 391
		5.5	The Layout of a Bottling Plant 393
4	Beer Filtration 339	6	Beer Losses 395
4.1	The Theory of Filtration 339	6.1	Factors Affecting Beer Losses 395
4.2	Filtration Technology 341	6.1.1	Wort Losses 396
4.2.1	Pulp Filtration 341	6.1.2	True Beer Losses 397
4.2.2	Diatomaceous Earth Filtration 342	6.2	Calculating Beer Losses 399
4.2.3	Sheet Filters 349	6.2.1	Calculation of Volumetric Losses 399
4.2.4	Membrane Filtration 350	6.2.2	Calculation of Surpluses and Deficits 400
4.2.5	Centrifuges 351	6.2.3	Calculating the Quantity of Wort and Beer Obtained from 100 kg of Malt 400
4.3	Combined Clarification Processes 353	6.2.4	Calculating the Extract Losses from the Cast-out Wort and/or from Malt Grist 400
4.4	Options for Replacing Diatomaceous Earth as a Filter Medium 353	6.2.5	The Economic Aspects of Recovering Beer 401
4.4.1	Combining a Centrifuge with a Pulp Filter 353		
4.4.2	Combining a Fine Clarification Centrifuge and a Horizontal Filter 354	7	The Finished Beer 405
4.4.3	Multi-step Microfiltration 354	7.1	The Composition of Beer 405
4.4.4	Filter Sheets 354	7.1.1	Extract in Beer 405
4.4.5	The Use of Synthetic Extrudates 355	7.1.2	Volatile Compounds 406
4.4.6	Crossflow Microfiltration 355	7.2	The Classification of Beer 407
4.4.7	Concluding Remarks on Modern Filtration Systems 359	7.3	Properties of Beer 407
4.5	Filtration – Auxiliary Equipment and Monitoring Devices 359	7.3.1	General Characteristics 407
4.5.1	Auxiliary Equipment 360	7.3.2	The Redox Potential of Beer 407
4.5.2	Devices for Monitoring Filtration 360	7.3.3	Beer Color 408
4.6	Beginning and Ending a Filtration Run 361	7.4	The Aroma of Beer 408
4.7	Tank Bottoms 362	7.4.1	Characteristics of Beer Aroma 409
4.8	Compressed Air 363	7.4.2	Factors Influencing Flavor 410
		7.4.3	Off-flavors in Beer 411
5	Packaging Beer 365	7.5	Beer Foam 414
5.1	Beer Storage After Filtration 365	7.5.1	The Theory of Foam Formation 414
5.2	Filling Barrels and Casks 365	7.5.2	Technological Influences on the Properties of Beer Foam 415
5.2.1	Barrels and Casks 365	7.6	Factors Affecting the Physico-chemical Properties of Beer and Their Stabilization 418
5.2.2	Cleaning Barrels and Casks 366	7.6.1	The Composition of Colloidal Turbidity 418
5.2.3	Filling Casks and Barrels 367	7.6.2	The Formation of Colloidal Turbidity 419
5.2.4	Improvements in Filling and Dispensing from Conventional Casks 368	7.6.3	Technological Measures to Improve Colloidal Stability 419
5.2.5	Cleaning and Filling Kegs 368	7.6.4	The Stabilization of Beer 419
5.2.6	Filling and Storage Areas 371	7.6.5	The Flavor Stability of Beer 428
5.3	Bottling and Canning 371	7.6.6	Methods for Monitoring and Predicting Flavor Stability 434
5.3.1	The Containers 371		
5.3.2	Cleaning Bottles 374		
5.3.3	Bottling 377		
5.3.4	Cleaning and "Sterilizing" Filling Machines 382		

7.6.7	Turbidity Originating Chemically	435	8.3.6	Maturation	474
7.6.8	Gushing	436	8.3.7	Filtration and Filling	476
7.7	Filterability of Beer	438	8.4	Production Methods for Various	
7.7.1	The Causes of Poor Filterability in			Top-fermented German Beers	477
	Beer	438	8.4.1	<i>Altbier</i> (Düsseldorf and Lower	
7.7.2	Remedial Measures	440		Rhine)	477
7.8	Microbiological Stability of Beer	441	8.4.2	<i>Kölsch</i>	479
7.8.1	Sources of Contamination	441	8.4.3	<i>Kristallweizen</i> – Filtered Wheat Beer	
7.8.2	Maintaining Microbiological Shelf			(Free of Yeast)	480
	Life	443	8.4.4	<i>Hefeweizen</i> – Bavarian-style Wheat Beer	
7.9	Physiological Effects of Beer	445		with Yeast	484
7.9.1	The Nutritional Value of Beer	445	8.4.5	Top-fermented Beers Brewed with	
7.9.2	Dietary Effects of Beer	446		Malted Cereals Other Than Barley and	
7.10	Bottom-fermented German Beer			Wheat	488
	Styles	446	8.4.6	<i>Berliner Weisse</i>	490
7.10.1	Pale Lager Beer (<i>Helles</i>)	447	8.4.7	Other Traditional Top-fermented Beer	
7.10.2	Pale Export (12.5+ %, w/w)	447		Styles	491
7.10.3	<i>Pils</i> or Pilsner	448	8.4.8	<i>Malzbier</i>	493
7.10.4	<i>Heller Bock</i>	448	8.4.9	Bavarian-style, Top-fermented Nutritive	
7.10.5	<i>Märzen</i>	449		Beers	493
7.10.6	<i>Dunkles</i> and <i>Schwarzbier</i>	449	8.4.10	Top-fermented, Non-alcoholic	
7.10.7	German Porter	450		Beers	494
7.10.8	<i>Rauchbier</i> or Smoked Beer	450	8.4.11	Top-fermented, Low-alcohol	
7.11	Special Beers	451		Beers	494
7.11.1	Dietetic Beers of the Past	451	8.5	Gluten-Free Beer	494
7.11.2	Nutritive Beers	453	8.5.1	Production from Conventional Raw	
7.11.3	Non-alcoholic Beers	454		Materials – Genetic Modification of	
7.11.4	Methods for Limiting Alcohol			Raw Materials Through Breeding	494
	Content	454	8.5.2	Enzymatic Modification of Raw	
7.11.5	Alcohol Removal with Physical			Materials	494
	Methods	456	8.5.3	Beer Production from Gluten-free Sugar	
7.11.6	Combinations of Different Processes in			or Starch Sources	495
	the Production of Non-alcoholic		8.5.4	Carbohydrate-rich Cereals and	
	Beer	459		Pseudocereals	495
7.11.7	Low-alcohol Beers	461			
8	Top Fermentation	465	9	High-gravity Brewing	497
8.1	General Information	465	9.1	High-gravity Wort Production	497
8.2	Top-fermenting Yeast	465	9.1.1	Lautering	497
8.2.1	Morphological Characteristics	465	9.1.2	Mashing	497
8.2.2	Physiological Differences	466	9.1.3	Wort Boiling	497
8.2.3	Fermentation Attributes	466	9.1.4	Whirlpool Operations	498
8.2.4	Yeast Handling	467	9.1.5	Dilution of High-gravity Wort at the	
8.3	Top Fermentation Techniques	468		Chiller	498
8.3.1	Fermentation Rooms and Fermentation		9.2	Fermentation of High-gravity	
	Vessels	468		Wort	499
8.3.2	Wort Composition	470	9.3	Dilution of High-gravity Beer After	
8.3.3	Pitching the Yeast	470		Maturation	499
8.3.4	Primary Fermentation	470	9.4	The Properties of Beer Produced with	
8.3.5	Changes in Wort During Top			High-gravity Techniques	500
	Fermentation	473
