Volume 1

Biography *xv*

Preface *xvii*

Acknowledgments *xxi*

- 1 Introduction: Progress of Thin Films and Coatings** *1*
Yujun Song
- 1.1 Introduction *1*
- 1.2 Thin Films for the Innovation of Information Technology *2*
- 1.3 Thin Films for Ultrasensitive Sensing Devices *7*
- 1.4 Thin Films for Sustainable Energy Application *9*
- 1.5 Thin Films and Coatings for Key Sources and Ecological Environment of Earth *28*
- 1.6 Thin Films and Coatings for Biomedical Engineering and Life Science *32*
- 1.7 Thin Films and Coatings for National Defense and Homeland Security *38*
- Acknowledgments *41*
- List of Abbreviations *42*
- References *44*
- 2 Fundamental in Functional Thin Films and Coatings** *59*
Weiwei Zhang and Yujun Song
- 2.1 Introduction *59*
- 2.2 Theory of Magneto-electric Coupling in Magnetic Thin Films *59*

2.3	Theory of Electronic Thin Films: Electronic Percolation and Spintronic Theory on the Semiconductor Thin Film	60
2.4	Theory of Metal Structural Thin Films: Metamaterials and the Negative Permeability Theory and Maxwell Theory	62
2.5	Theory of Surface Plasmon Resonance and Magnetoplasmonic Thin Films	66
2.6	Heterojunction Theory	73
2.7	Topological Insulator, Topological Semi-metal, and Perovskite	74
2.8	Acoustic Theory	77
2.9	Theory of Magnetoacoustic and Photoacoustic Coupling	79
2.9.1	The Mechanism of the Sound Pressure in the Presence of the Pulse Magnetic Field	80
2.9.2	The Mechanism of the Sound Pressure in the Presence of the Pulsed Magnetic Field and Static Magnetic Field	80
2.10	Theory of Acoustooptic Effect	82
2.11	Magnetothermal Thin Films: Phonon Thermal Theory	83
2.12	Theory of Thermoelectric Effect	84
2.13	Thermal Barrier Insulation Theory for TBC Coating	86
2.14	Permeability Theory: Fick First Diffusion Theory and Fick Second Diffusion Theory	87
2.15	Multi-physical Field Coupling Theory and Simulation Software	88
	Introduction	88
	Acknowledgments	90
	List of Abbreviation	91
	References	91
3	Multilayered Magnetic Thin Films for Electron Transport Control and Signal Sensing: From GMR, CMR, TMR to Quantum Anomalous Holzer Effect	95
	<i>Weiwei Zhang and Yujun Song</i>	
3.1	Introduction	95
3.2	Multilayered Magnetic Thin Film for the Electron Transport Control and Sensing Based on Magnetoresistance (GMR) Effect	96
3.2.1	Introduction of GMR	96
3.2.2	Fabrication of GMR Multilayered Thin Films	97
3.2.2.1	MBE Method for the Fabrication of the GMR Devices	99
3.2.2.2	Magnetron Sputtering Method for the Fabrication of GMR Devices	99
3.2.3	GMR Applications for Sensors	100

3.3	Multilayered Magnetic Thin Film for the Electron Transport Control and Sensing Based on Colossal Magnetoresistance (CMR) Effect	102
3.3.1	Introduction of CMR	102
3.3.2	Fabrication of Multilayered Thin Films Based on CMR Effect	103
3.3.3	CMR Applications	105
3.4	Multilayered Magnetic Thin Film for the Electron Transport Control and Sensing Based on Colossal Tunneling Magnetoresistance (TMR) Effect	106
3.4.1	Introduction of TMR	106
3.4.2	Fabrication of Multilayered Thin Films of the TMR Effect	107
3.4.3	TMR Applications	110
3.5	The Multilayered Magnetic Thin Film Based on Quantum Anomalous Holzer Effect (QAHE)	111
3.6	Summary and Perspectives	112
	Acknowledgments	113
	List of Abbreviation and Symbol	114
	References	114
4	Bismuth-Substituted Iron Garnet Films for Magnetophotonics: Part A – Fabrication Methods and Microstructure Property Study	125
	<i>Andrey A. Voronov, T. Mikhailova, Olga V. Borovkova, Alexander N. Shaposhnikov, Vladimir N. Berzhansky, and Vladimir I. Belotelov</i>	
4.1	Introduction	125
4.2	Fabrication Methods	126
4.2.1	Synthesis Technology and Conditions of Bismuth-substituted Iron Garnet Films	126
4.2.2	Fabrication of Fabry–Perot 1D-MPC with BiIG Bilayer	135
4.2.3	Fabrication of Tamm 1D-MPC with BiIG Bilayer	136
4.3	Properties of the Structures	139
4.3.1	Magneto-optical Properties of FP-1D-MPCs	139
4.3.2	Magneto-optical Properties of T-1D-MPCs with BiIG Bilayer	143
4.3.3	An increase of the Magneto-optical Response in the Ultrathin Films	145
	Acknowledgment	155
	List of Abbreviations and Symbols	156
	References	156

5	Bismuth-substituted Iron Garnet Films for Magnetophotonics: Part B – Devices and Applications	161
	<i>Andrey A. Voronov, Daria O. Ignatyeva, Nikolay A. Gusev, Petr M. Vetoshko, Nazar V. Lugovskoy, Yujun Song, Vladimir N. Berzhansky, and Vladimir I. Belotelov</i>	
5.1	Device Assemble and Application of Iron Garnet Films for Ultrasensitive Magnetometry	161
5.2	Devices Assemble and Application of BiIG Films for Biosensing	174
5.3	Devices Assemble and Application of Iron Garnet Films for Magneto-optical Eddy Current Flaw Detection	178
5.3.1	Introduction	178
5.3.2	Experimental Part	179
5.3.3	Introscope	180
5.3.4	Physical Properties of MO Sensors	181
5.3.5	The Sensory Properties of the EA Films	184
5.3.5.1	The Effect of Alternating Field Amplitude	184
5.3.5.2	The Effect of Alternating Field Frequency	184
5.3.5.3	The Effect of Bias Magnetic Field	185
5.3.5.4	Dynamic Domains in the Garnet Film Sensor Element	186
5.3.6	The Sensory Properties of the EP Films	188
5.3.7	Applications of MOEC: Imaging of Welds	188
5.3.7.1	Nondefective Welds	188
5.3.7.2	Defective Welds	190
5.3.8	Simulation of EC Magnetic Fields in Samples with Defects	191
5.4	Conclusions and Perspectives	193
	Acknowledgments	193
	List of Abbreviation and Symbol	194
	References	194
 6	 MEMS, NEMS, AEMS, and Quantum Films for the Next Generation of Computing and Information Technology	 199
	<i>Haishuai Chai, Junmei Wang, and Yujun Song</i>	
6.1	Introduction	199
6.2	Typical Fabrication Methods for MEMS, NEMS, and AEMS	200
6.2.1	Fabrication of Microstructures	200
6.2.2	Fabrication Process of Complementary Metal Oxide Semiconductor (CMOS)	203
6.2.3	Fabrication Process of Field Emission Transistors (FET)	203

6.2.4	Giant Magnetoresistance (GMR) Sensor and Its Fabrication Method	204
6.3	From MEMS to NEMS and then to Quantum Films and AEMS for the Next Generation of Information Technology	205
6.3.1	The Trend of Microsystem Integration Technology	205
6.3.2	The Development Trend of Microsystem Packaging Technology	207
6.3.3	Challenges in the Development of Microsystems Technology	207
6.4	NEMS and AEM	210
6.4.1	NEMS	210
6.4.2	AEMS	211
6.5	Quantum Films for Information Technology	212
6.6	Summary and Perspectives	214
	Acknowledgments	214
	List of Abbreviations	214
	References	215
7	Metamaterial or Metastructural Thin Films for EM Wave Control	221
	<i>Menglin L.N. Chen, Luzhou Chen, Xunwang Dang, Maokun Li, Li Jun Jiang, and Wei E.I. Sha</i>	
7.1	Introduction	221
7.2	Modeling and Synthesis Methods of Metasurfaces	222
7.2.1	Jones Vector and Jones Matrix	223
7.2.2	Polarizability Model	224
7.2.3	Susceptibility Model	225
7.2.4	Equivalent Impedance Model	226
7.3	Simulation Algorithms of Quasi-periodic Electromagnetic Surfaces	227
7.3.1	Introduction to EM Surfaces	227
7.3.2	Design of Quasi-periodic EM Surfaces	228
7.3.3	Simulation Algorithms of Quasi-periodic EM Surfaces	229
7.3.4	Review of Simulation Algorithms of Quasi-periodic EM Surfaces	230
7.4	Orbital Angular Momentum of Electromagnetic Waves: Generation and Detection	233
7.4.1	Introduction	233
7.4.2	Generation of Orbital Angular Momentum	234
7.4.2.1	Geometric-phase Metasurfaces	234
7.4.2.2	Photonic Crystals	237
7.4.3	Detection of Orbital Angular Momentum	238

7.5	Application in Spontaneous Emission Modification	241
7.5.1	Spontaneous Emission in Inhomogeneous Electromagnetic Environment	241
7.5.2	Calculation of Spontaneous Emission Rate	242
7.5.3	Metamaterials Enhance Spontaneous Emission	242
7.5.4	Metasurfaces Enhance Spontaneous Emission	243
7.5.5	Other Potential Application in Quantum Optics	245
7.6	Conclusion and Perspectives	245
	Acknowledgments	245
	List of Abbreviations	246
	References	247
8	Semiconductor Thin Films for Information Technology	257
	<i>Na Chen</i>	
8.1	Introduction	257
8.2	Fabrication of Semiconductor Thin Films	258
8.2.1	Molecular Beam Epitaxy (MBE)	259
8.2.2	Magnetron Sputtering	259
8.2.3	Metal–Organic Chemical Vapor Deposition (MOCVD)	260
8.3	Nonmagnetic Semiconductor Thin Films and Typical Applications	261
8.3.1	Semiconductor Thin Films for Light-emitting Devices	261
8.3.2	Thin Film Transistors for Displays	263
8.3.3	Phase-change Semiconductor Thin Films	264
8.3.4	Semiconductor Thin Films for Sensors	268
8.4	Magnetic Semiconductor Thin Films	269
8.4.1	Diluted Magnetic Semiconductors	270
8.4.2	Amorphous Magnetic Semiconductors	272
8.4.3	Phase-change Amorphous Magnetic Semiconductor Thin Films	275
8.4.4	Magnetic Semiconductor Thin Film-based Spintronic Devices	277
8.4.5	Prospective for Magnetic Semiconductors	279
8.5	Conclusion and Outlook	280
	List of Abbreviations	280
	References	280
9	Glass Transition in Organic Semiconductor Thin Films	285
	<i>Han-Nan Yang and Zheng-Hong Lu</i>	
9.1	Introduction	285

9.2	Determination of Glass Transition Temperature in Organic Thin Films	287
9.3	Model for Predicting Glass Transition Temperature of Organic–Organic Composites	291
9.4	Model for Predicting Glass Transition Temperature of Nano-organic Composites	292
9.5	Summary	295
	Acknowledgments	296
	List of Abbreviations	296
	References	296
10	Thermoelectric Films for Electricity Generation	299
	<i>Metin Yurddaskal, Melis Yurddaskal, Ozan Yilmaz, and Serdar Gultekin</i>	
10.1	Introduction	299
10.2	Thermoelectricity	300
10.3	Overview of Inorganic and Organic Thermoelectrics for Thin Films	301
10.3.1	The Seebeck Effect	301
10.3.2	The Peltier Effect	307
10.3.3	The Thomson Effect	309
10.4	Classification of Thin Film Thermoelectric (TE) Materials	311
10.4.1	Inorganic Thermoelectric Thin Films	311
10.4.1.1	Bi–Te-Based Superlattices	311
10.4.1.2	Cobalt Oxide-Based Thin Films	311
10.4.1.3	Zn-Based Thin Films	312
10.4.1.4	Cu-Based Thin Films	312
10.4.2	Organic-based Thin Film TE Materials	313
10.4.2.1	Polyacetylene and Polyaniline	313
10.4.2.2	Poly(3,4-ethylenedioxythiophene)	313
10.4.2.3	Polypyrrole and Polythiophene	314
10.4.2.4	Other n-Type Polymers	314
10.4.3	Inorganic–Organic Composite Thermoelectric Thin Film Materials	314
10.4.3.1	Metal–Organic Frameworks	315
10.4.3.2	Carbon Nanotube–Polymer Composites	315
10.5	Applications of Thermoelectric Materials	315
10.5.1	Thermoelectric Cooling	316
10.5.2	Thermoelectric Power Generation	316
10.5.3	Organic Inverter Circuit	316

10.5.4	Organic Light-Emitting Diode (OLED)	318
10.5.5	Organic Radio Frequency Identification Tags	319
10.5.6	Organic DNA Sensors	319
10.5.7	Limitations	320
10.6	Techniques of Thin Film Deposition for Thermoelectric Device	320
10.6.1	Sputtering	320
10.6.2	Molecular Beam Epitaxy (MBE)	321
10.6.3	Metal–Organic Chemical Vapor Deposition (MOCVD)	321
10.6.4	Electrochemical Deposition (ECD)	323
10.6.5	Flash Evaporation (FE)	323
10.6.6	Thermal Evaporation	324
10.6.7	Pulsed Laser Deposition (PLD)	324
10.7	Conclusion and Future Trends	326
	List of Abbreviations and Symbols	327
	References	328

Volume 2

Biography xv

Preface xvii

Acknowledgments xxi

11	Template-assisted Fabrication of Nanostructure Thin Films for Ultrasensitive Detection of Chemicals and Biomolecules: Part A – Template-assisted Nanoimprinting Technology for Functional Thin Films	339
	<i>Xiaomin Zhu, Xinhua Chen, Andrey A. Voronov, Vladimir I. Belotelov, and Yujun Song</i>	
12	Template-assisted Fabrication of Nanostructured Thin Films for Ultrasensitive Detection of Chemicals and Biomolecules: Part B – Detection of Chemicals and Biomolecules Based on Nanostructured Thin Films	381
	<i>Xiaomin Zhu, Xinhua Chen, and Yujun Song</i>	
13	Polymer-based Films for Artificial Intelligence	411
	<i>Ran Liu, Junmei Wang, and Yujun Song</i>	
14	Selective Permeable Thin Films and Membranes	447
	<i>Qiong Wu, Xiaoxiong Zhao, Lifan Peng, and Yujun Song</i>	

- 15 Biomass-Derived Functional Films and Coatings 489**
Gao Xiao
- 16 Polymer Composite Coating for Anti-marine and Related Organism Corrosion 511**
Kaifeng Chen, Zhipeng Xie, Yu Liang, Jingjing Wang, and Haiyan Zhuang
- 17 Anechoic Coating for Underwater Vehicles 549**
Weiwei Zhang and Yujun Song
- 18 Thin Films and/or Coating for Electromagnetic Interference and Stealth 587**
Junmei Wang and Yujun Song
- 19 Thermal Barrier Coating for Aerial and Aerospace Engine 615**
Zaidao Li and Yujun Song
- 20 Perspectives for Thin Films and Coatings 647**
Yujun Song
- Index 681**
