

## **Preface — VII**

### **1 Selected examples of the energy conservation law — 1**

- 1.1 Altitude-dependent cooling of atmospheric air — 1
- 1.1.1 Ultracold neutrons — 3
- 1.2 A beer leak from a barrel and Torricelli's formula — 3
- 1.3 The second cosmic velocity — 5
- 1.4 Pendulum mechanics — 6
- 1.5 X-ray production and use including computer-assisted tomography (CT) — 9
- 1.6 The Zeeman effect, nuclear magnetic resonance (NMR), and magnetic resonance imaging (MRI) — 14
- 1.7 Phase transitions and crack propagation — 17

### **2 The momentum conservation law — 22**

- 2.1 Rocket propulsion and the Tsiolkovsky formula: the basis of space flight — 22
- 2.2 Positron annihilation and positron emission tomography (PET) — 23
- 2.3 Gas pressure and equation of state: implications for light and wind pressure — 25
- 2.3.1 Diminishing atmospheric pressure with height: the barometric formula — 31
- 2.4 Movement in water — 32

### **3 Conservation laws and symmetry of space and time — 36**

- 3.1 Light reflection and refraction — 36
- 3.2 Translational symmetry and X-ray diffraction condition — 39
- 3.2.1 The concept of a reciprocal lattice and the quasi-momentum conservation law — 41

### **4 The usage of the energy-momentum conservation law in its four-dimensional form — 44**

- 4.1 Recoil energy and the recoil-free Mossbauer effect — 45
- 4.2 Inelastic photon scattering by a free electron: the Compton effect — 48
- 4.3 Snooker-like particle collisions and slowing down fast fission neutrons toward achieving a nuclear chain reaction — 50
- 4.4 Rutherford backscattering spectroscopy (RBS) — 54

<b>5</b>	<b>A free electron cannot absorb a photon — 58</b>
5.1	The photoelectric effect — 58
5.2	Clean energy harvesting and new lighting technologies — 62
5.2.1	Solar cells — 62
5.2.2	Semiconductor detectors for infrared imaging — 66
5.2.3	Light-emitting diodes (LEDs) — 67
5.3	Binding energy of the electron-hole pair within an exciton — 70
<b>6</b>	<b>Lasers — 74</b>
<b>7</b>	<b>Nuclear reactions — 80</b>
7.1	Beta-decay, neutrino discovery, and experiments with solar neutrinos — 80
7.2	Mass defect and nuclear energy — 84
<b>8</b>	<b>Energy transformation — 90</b>
8.1	Transformation of chemical energy into mechanical energy: the internal combustion engine — 90
8.2	Transformation of chemical energy into mechanical energy: muscle contraction — 94
8.3	Transformation of light energy into chemical energy: photosynthesis — 96
8.4	Transformation of heat energy into electricity: thermoelectricity — 98
<b>List of prominent scientists (in alphabetic order) mentioned in this book — 109</b>	
<b>Index — 119</b>
