**List of tables — XXIII**

**List of symbols and abbreviations — XXVII**

**Huari Quechua morphological glosses — XXIX**

**Glosses from other languages cited in this work — XXXIII**

**1 Introduction — 1**

**2 Data & general methods — 4**

2.1 Data collection — 4

2.2 Brief description of Huari and its linguistic situation — 5

2.3 Short sociolinguistic profile of the speakers — 10

2.4 Description of the experimental tasks — 11

2.5 Partial availability of the speech data used in the analysis — 17

2.6 General method — 17

2.7 Acoustical analysis, visualization and statistics — 18

2.8 A short note on examples — 18

**3 Theoretical background and literature review — 19**

3.1 Introduction — 19

3.2 Prosodic units and their hierarchy — 21

3.2.1 Different kinds of evidence for the existence of prosodic units  
in languages — 22

3.2.2 Universal aspects of the prosodic hierarchy — 24

3.3 Intonation in the autosegmental-metrical model — 25

3.3.1 Stress and metrical structure — 27

3.3.2 Word stress crosslinguistically — 28

3.3.3 What is (not) known about stress in Quechua — 32

3.3.4 Pitch accents and arriving at phonological tones from pitch  
contours — 38

3.4 Intonation systems typologically — 41

3.4.1 Domains of tone assignment — 41

|          |                                                                                                                   |            |
|----------|-------------------------------------------------------------------------------------------------------------------|------------|
| 3.4.2    | Tonal scaling and other gradual cues for prosodic constituency —                                                  | <b>42</b>  |
| 3.4.3    | Tonal inventories —                                                                                               | <b>43</b>  |
| 3.4.4    | Delayed peaks in Spanish and the notion of the nuclear accent —                                                   | <b>45</b>  |
| 3.4.5    | Differing degrees of combinatorial freedom in the tonal make-up of prosodic constituents —                        | <b>47</b>  |
| 3.4.6    | “Phrasing” and “Accenting” languages: An appropriate typology? —                                                  | <b>48</b>  |
| 3.4.7    | Restrictions on combinatorial freedom —                                                                           | <b>54</b>  |
| 3.5      | Relation between tones and the segmental string: association and alignment —                                      | <b>59</b>  |
| 3.5.1    | Segmental anchoring in pitch accents —                                                                            | <b>61</b>  |
| 3.5.2    | Secondary association and tonal spreading —                                                                       | <b>63</b>  |
| 3.5.3    | Representational possibilities for the association and alignment of tones in languages without word stress —      | <b>67</b>  |
| 3.5.3.1  | French —                                                                                                          | <b>67</b>  |
| 3.5.3.2  | Tashlhiyt Berber —                                                                                                | <b>70</b>  |
| 3.5.3.3  | Ambonese Malay —                                                                                                  | <b>73</b>  |
| 3.6      | Recursive prosodic structure —                                                                                    | <b>76</b>  |
| 3.6.1    | The Strict Layer Hypothesis and prosody-syntax mapping —                                                          | <b>76</b>  |
| 3.6.2    | Empirical evidence for recursive prosodic structure from systematic pitch scaling —                               | <b>80</b>  |
| 3.6.2.1  | Stockholm Swedish —                                                                                               | <b>81</b>  |
| 3.6.2.2  | British English —                                                                                                 | <b>82</b>  |
| 3.6.2.3  | Northern German —                                                                                                 | <b>83</b>  |
| 3.6.2.4  | European Portuguese —                                                                                             | <b>86</b>  |
| 3.6.2.5  | (Tokyo) Japanese —                                                                                                | <b>90</b>  |
| 3.6.3    | Separating arguments for prosodic recursion from assumptions of universality and a close prosody-syntax mapping — | <b>92</b>  |
| 3.6.4    | What is (not) known about prosodic recursion in Spanish and Quechua —                                             | <b>94</b>  |
| 3.7      | Information structure and prosody —                                                                               | <b>96</b>  |
| 3.7.1    | Context and the question under discussion —                                                                       | <b>97</b>  |
| 3.7.2    | QUD-based annotation of information structure independent of form —                                               | <b>102</b> |
| 3.7.3    | Prosodic cues and information structure —                                                                         | <b>110</b> |
| 3.7.3.1  | Spanish —                                                                                                         | <b>111</b> |
| 3.7.3.2  | (Cuzco) Quechua —                                                                                                 | <b>120</b> |
| <b>4</b> | <b>Refined research questions —</b>                                                                               | <b>128</b> |

| 5.2.4.2  | NQ01's 59 and 65 —                                                                       | <b>253</b> |
| 5.2.4.3  | XJ45's 59 and 65 —                                                                       | <b>257</b> |
| 5.2.5    | Comparison between the variants —                                                        | <b>261</b> |
| 5.3      | OT-Analysis of the “main” and “phrase” accentuations and their relation to Quechua —     | <b>271</b> |
| 5.3.1    | Variation in tone distribution for the phonological phrase and the intonational phrase — | <b>273</b> |
| 5.3.2    | Variation in association and alignment —                                                 | <b>281</b> |
| 5.3.2.1  | Main variant Spanish —                                                                   | <b>284</b> |
| 5.3.2.2  | Phrase accentuation Spanish variant 1 (exemplified by speaker ZE55) —                    | <b>287</b> |
| 5.3.2.3  | Phrase accentuation Spanish variant 2 (exemplified by speakers XJ45 and NQ01) —          | <b>289</b> |
| 5.3.3    | IP-final behaviour —                                                                     | <b>291</b> |
| <b>6</b> | <b>Huari Quechua —</b>                                                                   | <b>299</b> |
| 6.1      | Description of Huari Quechua tonal contours —                                            | <b>299</b> |
| 6.1.1    | Introduction to the rising and falling contours —                                        | <b>300</b> |
| 6.1.2    | Alignment of the tonal transition with the word boundary —                               | <b>311</b> |
| 6.1.3    | Alignment with the phrase boundary and phrase-final devoicing —                          | <b>314</b> |
| 6.1.4    | Alignment with the word penult —                                                         | <b>323</b> |
| 6.1.5    | Contours on single-word phrases —                                                        | <b>326</b> |
| 6.1.6    | Peak alignment in rise-falling contours in Huari Quechua and Spanish —                   | <b>335</b> |
| 6.1.7    | Extent of the phonological phrase and mapping to other categories —                      | <b>348</b> |
| 6.1.8    | Marked tonal alignment on Spanish loanwords —                                            | <b>353</b> |
| 6.1.8.1  | Description of the patterns —                                                            | <b>353</b> |
| 6.1.8.2  | A typological comparison —                                                               | <b>361</b> |
| 6.1.8.3  | Distribution of the loanword patterns across speakers and lexical items —                | <b>372</b> |
| 6.2      | Phrasing and relation to meaning-based categories —                                      | <b>382</b> |
| 6.2.1    | Brief excursion: The question of (polar) questions —                                     | <b>384</b> |
| 6.2.2    | Moves with rising and falling contours in Conc —                                         | <b>391</b> |
| 6.2.3    | Distribution of contours in nominal sequences —                                          | <b>399</b> |
| 6.2.3.1  | Noun phrases and other nominal sequences —                                               | <b>399</b> |
| 6.2.3.2  | Distribution of tonal patterns and alignment variant preferences —                       | <b>403</b> |
| 6.2.3.3  | Phrasal prominence and relation to information structure and information status —        | <b>412</b> |

|          |                                                                                                            |
|----------|------------------------------------------------------------------------------------------------------------|
| 6.3      | OT-Analysis — <b>424</b>                                                                                   |
| 6.3.1    | Rise-falling contours — <b>428</b>                                                                         |
| 6.3.1.1  | Word boundary-variant — <b>428</b>                                                                         |
| 6.3.1.2  | Word penult-variant — <b>438</b>                                                                           |
| 6.3.2    | Rising contours — <b>442</b>                                                                               |
| 6.3.2.1  | Word boundary-variant — <b>443</b>                                                                         |
| 6.3.2.2  | Word penult-variant — <b>449</b>                                                                           |
| 6.3.3    | Only-falling contours — <b>449</b>                                                                         |
| 6.3.4    | The marked loanword patterns and moving towards Spanish — <b>454</b>                                       |
| 6.4      | Context-based analysis of prosodic and other cues to information structure — <b>456</b>                    |
| 6.4.1    | “Broad focus” in Cuento — <b>457</b>                                                                       |
| 6.4.1.1  | First Cuento sequence: Establishing a default for broad focus — <b>458</b>                                 |
| 6.4.1.2  | Second Cuento sequence: Syntactic and prosodic subordination — <b>463</b>                                  |
| 6.4.2    | Complex contexts and marked prosody in Maptask — <b>468</b>                                                |
| 6.4.2.1  | First sequence: Initial and final backgrounded constituents — <b>468</b>                                   |
| 6.4.2.2  | Second sequence: Differential interpretations for initial elements — <b>472</b>                            |
| 6.4.2.3  | A positional template for information structural roles? — <b>477</b>                                       |
| 6.4.2.4  | Third sequence: Cueing against context — <b>481</b>                                                        |
| 6.4.3    | Variability and conflicting cues in Conc — <b>485</b>                                                      |
| 6.4.3.1  | Cues to information structure in five examples from ZR29 & HA30’s Conc — <b>486</b>                        |
| 6.4.3.2  | Comparison with further examples — <b>497</b>                                                              |
| 6.4.4    | Conclusions — <b>501</b>                                                                                   |
| <b>7</b> | <b>Synthesis — 504</b>                                                                                     |
| 7.1      | Huari Quechua result summary — <b>504</b>                                                                  |
| 7.1.1    | Word prosodic profile of Huari Quechua — <b>504</b>                                                        |
| 7.1.2    | Observed patterns of intonational variation — <b>505</b>                                                   |
| 7.1.2.1  | Three tonal patterns — <b>505</b>                                                                          |
| 7.1.2.2  | Alignment variants — <b>506</b>                                                                            |
| 7.1.3    | The role of prominence and information structure — <b>510</b>                                              |
| 7.2      | Huari Spanish result summary — <b>512</b>                                                                  |
| 7.2.1    | Tonal inventory and encoding of pragmatic meaning via paradigmatic contrasts in Huari Spanish — <b>512</b> |
| 7.2.2    | Syntagmatic intonational contrasts: Deaccentuation and phrase accentuation — <b>514</b>                    |
| 7.2.3    | Hierarchical scaling contrasts and recursive prosodic structure — <b>515</b>                               |
| 7.2.4    | Relation between the observed variants — <b>516</b>                                                        |
