

Contents

1	Introduction — 1
2	Graded metamaterials — 6
2.1	Spectral band diagrams — 6
2.2	Graded parameters — 10
3	Metasurface design — 12
3.1	Problem formulation — 12
3.2	Asymptotic analysis — 15
3.3	Numerical methods — 21
3.4	Cochlea-inspired graded metasurface — 25
3.5	Cochlear membrane modes — 27
3.6	Filtering waves — 29
3.7	Discussion — 33
4	3D metamaterial design — 34
4.1	Problem setting — 34
4.2	Asymptotic analysis — 35
4.3	Numerical methods — 40
4.4	Discussion — 45
5	Implications for signal processing — 47
5.1	Modal decompositions of signals — 47
5.2	Natural sounds — 54
5.3	Random projections — 60
5.4	Discussion — 74
6	Robustness with respect to imperfections — 76
6.1	Symmetric matrices and diluteness — 76
6.2	Imperfections in the device — 79
6.3	Removing resonators from the device — 85
6.4	Implications for signal processing — 89
6.5	Discussion — 91
7	Active metamaterials with nonlinear amplification — 93
7.1	Cochlear amplification — 93
7.2	Nonlinear amplification — 95
7.3	Single-mode approximation — 97
7.4	Fully-coupled system — 102
7.5	Discussion — 103
