Preface — V

Nomenclature — XIII

1 Introduction — 1

- 1.1 Introductory remarks — 1
 - References for the Introduction — 8
- 1.2 Preliminary remarks — 10
 - References for Preliminaries — 11
- 1.3 Role of causality — 11
 - References — 14

2 Kinematics — 15

- 2.1 Body — 15
- 2.2 Lagrangian and Eulerian descriptions of kinematical quantities — 17
- 2.3 Displacement and displacement gradient — 18
- 2.4 Deformation gradient — 18
- 2.5 Velocity — 22
- 2.6 Velocity gradient — 23
- 2.7 Acceleration — 23
- 2.8 Polar decomposition theorem — 23
- 2.9 Green-St. Venant strain — 26
- 2.10 Almansi-Hamel strain — 27
- 2.11 Problems — 28
- 2.12 Stretch along a particular direction — 28
- 2.13 Shear — 29
- 2.14 Simple shear — 31
- 2.15 Axial strain — 32
- 2.16 Linearization of the non-linear strain — 34
- 2.17 Rigid motion — 36
- 2.18 Problems — 36
 - References — 37

3 Compatibility of the linearized strain — 38

- 3.1 Uniqueness of the displacement field to within rigid body motion for a given linearized strain — 38
- 3.2 Necessary and sufficient conditions for compatibility — 39
 - References — 50

4	Frames, changes of frames, frame indifference — 51
	References — 55
5	Elastic bodies — 56
5.1	Cauchy elastic body — 56
5.2	Green elastic body — 59
5.2.1	Strain energy — 59
5.2.2	Mechanical working (time rate at which work is done) — 60
5.2.3	Power theorem — 60
5.2.4	Work of deformation — 61
5.2.5	Work postulate (and its linearization) — 65
5.3	Problems — 70
	References — 70
6	Material symmetry for elastic bodies — 71
6.1	Definition of material symmetry for an elastic body — 72
6.2	Isotropic solid — 72
6.3	Linearization of the isotropy condition — 73
6.4	Response of linearized anisotropic elastic bodies — 75
6.4.1	One plane of material symmetry — 76
6.4.2	Orthotropic elastic body — 76
6.4.3	Transverse isotropy — 77
6.5	Problems — 78
	References — 78
7	Elasto-statics — 80
7.1	Anti-plane strain — 80
7.2	Plane strain — 82
7.3	Plane stress — 85
7.4	Generalized plane stress — 87
8	Stress functions — 90
8.1	Airy's stress function — 90
8.2	Westergaard potential — 91
8.2.1	Problems using the Westergaard potential — 94
8.3	Problems — 103
	References — 103
9	Axi-symmetric problems — 104
9.1	Three-dimensional stress functions — 110
9.2	Problems — 113

10	Torsion of prismatic cylinders — 115
10.1	Semi-inverse solution — 115
10.1.1	Boundary conditions — 117
10.2	Torsion of an elliptic shaft — 120
10.3	Torsion of a cylinder with rectangular cross-section — 121
10.4	Torsion of multiply connected domains — 124
10.5	The torsion membrane analogy — 126
10.6	Problems — 128
	References — 129
11	Problems in cylindrical polar coordinates — 130
11.1	Equilibrium equations in cylindrical polar coordinates — 134
11.2	Stress function in polar coordinates — 136
11.3	Torsion of circular shafts of variable diameter — 137
	References — 142
12	Stress concentration — 143
12.1	Circular hole in an infinite plate-uniaxial loading — 143
12.2	Circular hole in an infinite plate-biaxial loading — 148
12.3	Rigid circular inclusion — 149
12.4	State of stress and strain due to an elliptic hole in a plane — 153
12.4.1	Transformation of stress in elliptic coordinates — 155
12.4.2	Analysis in the vicinity of a crack tip — 159
12.5	Stresses around cracks — 161
12.5.1	Anti-plane strain: Mode III loading — 161
12.5.2	Plane strain or plane stress — 166
12.6	Problems — 170
13	Concentrated loads — 171
13.1	Some general remarks — 172
13.1.1	Boussinesq-Papkovich-Neuber Solution — 172
13.1.2	Completeness of the Boussinesq-Papkovitch-Neuber solution — 172
13.1.3	Solution for sufficiently smooth body force — 172
13.2	Concentrated force — 173
13.3	Doublet — 182
13.4	Couplets — 183
13.4.1	Alternate arrangement — 183
13.5	Center of dilatation — 183
13.6	Problems — 184
	References — 185

14	Complex variable methods — 186
14.1	Muskhelishvili's technique — 186
	References — 197
15	Approximations — 198
15.1	Elementary beam theory — 198
16	Elastodynamics — 203
	References — 207
17	Nonstandard approach to elasticity — 208
17.1	Implicit theories for elasticity and their linearization — 208
	References — 214
A	Finite dimensional vector spaces — 217
A.1	Subspaces and affine spaces — 218
A.2	Gram-Schmidt procedure — 219
A.3	Euclidean space, distance and inequalities — 219
A.4	Vector product — 220
A.5	The scalar triple product — 220
A.6	Linear transformations — 220
A.7	Existence of linear transformations — 221
	References — 221
B	Tensor analysis — 223
B.1	Representation theorem — 223
B.2	Matrix algebra — 223
B.3	Determinant — 224
B.4	Indicial notation and summation convention — 226
B.5	Cramer's rule — 227
B.6	Transpose — 229
B.7	Range — 229
B.8	Inverse — 231
B.9	Rank — 232
B.10	Eigen values — 232
B.11	Geometric multiplicity of an eigen value — 233
B.12	Algebraic multiplicity of eigen values — 233
	References — 235
