List of Figures	xi
List of Tables	xv
1 Introduction	1
1.1 Contributions	4
1.2 Thesis layout	5
2 Review of the numerical treatment of large deformations	7
2.1 Liquefaction of saturated granular soil	8
2.2 Numerical reproduction of the physics of liquefaction	11
2.2.1 Energy-based method	12
2.2.2 Probabilistic methods	13
2.2.3 Modelling methods	14
2.3 Methods to simulate large deformations numerically	17
2.3.1 Mesh-based methods	17
2.3.2 Mesh-less methods	21
2.4 Concluding remarks	25
3 Formulation of the Material Point Method for modelling large deformations	27
3.1 Development of the material point method	28
3.1.1 Computation algorithm of MPM	29
3.1.2 Discretisation	30
3.1.3 Grid crossing error	32
3.1.4 Fluid modelling in MPM	34
3.2 Formulation of dynamic MPM for single phase problems	35
3.3 Deformation of particle domains	39
3.3.1 Convected Particle Domain Interpolation formulation	42
3.3.2 Axi-symmetric CPDI formulation extension	44
3.4 Comparison of performance between MPM and CPDI	45
3.5 Formulation of the penalty contact algorithm	49
3.5.1 Detection of a contact pair	51
3.5.2 Calculation of the contact forces	52
3.6 Validation of CPDI : Granular column collapse simulation	53
3.6.1 Review of previous numerical simulations	53
3.6.2 Problem Description	54
3.6.3 Results and discussions	56

3.6.4	Concluding remarks	64
4	Modelling Saturated Media using Material Point Method	65
4.1	Saturated porous media mechanics	65
4.2	Formulation of two-phase MPM	67
4.2.1	Phase relation on porous media	67
4.2.2	Concept of effective stress	69
4.2.3	Incremental time step estimation in saturated media	69
4.3	Governing equation of the coupled MPM	70
4.3.1	Conservation of mass	70
4.3.2	Conservation of momentum	72
4.3.3	Initial and boundary conditions	72
4.3.4	Weak formulation of momentum and traction	74
4.3.5	Spatial and temporal discretisation	75
4.3.6	Numerical space integration	78
4.3.7	Time marching and solution procedure	80
4.3.8	Extension of Kelvin-Voigt elements for saturated media	81
4.4	Extension of discretisation from FE to MPM	85
4.4.1	Particle discretisation and initialisation	86
4.4.2	Solution procedure involving a single time increment	88
4.5	One-dimensional consolidation example in CPDI	94
4.6	Concluding remarks	96
5	Constitutive Modelling	97
5.1	The UBCSAND Model	97
5.2	Verification of constitutive law	101
5.3	Shake Table Test	103
5.4	Conclusion	111
6	Contributions towards numerical simulation of pile installation	113
6.1	Vibratory pile installation	114
6.2	Numerical simulation of model pile installation	115
6.2.1	Vibratory installation simulation results for a model pile	120
6.2.2	Impact driven model pile installation simulation	126
6.3	Numerical simulation of a full-scale pile installation	132
6.4	Application of CPDI for Class-A offshore monopile vibratory installation prediction	150
6.5	Summary	160
7	Conclusions and Recommendations	161
7.1	General conclusions	161
7.2	Future developments	165
	Bibliography	167

A	Appendix to Chapter 3.4 : Performance of the single phase CPDI model	187
A.1	Frame-indifference of CPDI	187
A.2	Comparison of MPM and CPDI : Cantilever beam problem	190
B	Appendix to Chapter 3.5 : Verification of the penalty contact algorithm	199
C	Appendix to Chapter 5 and Chapter 6: Hypoplastic Model for sand	203
D	Appendix to Chapter 3.6 and 5.3 : Comparison of performance of Constitutive laws	209
D.1	Granular Column Collapse	209
D.2	Shake Table Test : Performance comparison of the UBCSAND and hypoplastic models	213
E	Appendix to Chapter 6.4 : Summary of data from field test	219
E.1	CPT Data at other locations	221
E.2	Installation data for other measured piles	224
