Preface *xi*

1	Nanowire Energy Storage Devices: Synthesis, Characterization, and Applications	1
1.1	Introduction	1
1.1.1	One-Dimensional Nanomaterials	1
1.1.1.1	Nanorods	3
1.1.1.2	Carbon Nanofibers	3
1.1.1.3	Nanotubes	3
1.1.1.4	Nanobelts	5
1.1.1.5	Nanocables	6
1.1.2	Energy Storage Science and Technology	6
1.1.2.1	Mechanical Energy Storage	7
1.1.2.2	Electromagnetic Energy Storage	9
1.1.2.3	Electrochemical Energy Storage	9
1.1.3	Overview of Nanowire Energy Storage Materials and Devices	13
1.1.3.1	Si Nanowires	15
1.1.3.2	ZnO Nanowires	17
1.1.3.3	Single Nanowire Electrochemical Energy Storage Device	18
	References	19
2	Fundamentals of Nanowire Energy Storage	27
2.1	Physical and Chemical Properties of Nanowires	27
2.1.1	Electronic Structure	27
2.1.2	Thermal Properties	29
2.1.2.1	Melting Point	29
2.1.2.2	Thermal Conduction	30
2.1.3	Mechanical Properties	31
2.1.4	Adsorption and Surface Activity	32
2.1.4.1	Adsorption	33
2.1.4.2	Surface Activity	33
2.2	Thermodynamics and Kinetics of Nanowires Electrode Materials	34
2.2.1	Thermodynamics	34

2.2.2	Kinetics	34
2.3	Basic Performance Parameters of Nanowires Electrochemical Energy Storage Devices	35
2.3.1	Electromotive Force	36
2.3.2	Operating Voltage	36
2.3.3	Capacity and Specific Capacity	36
2.3.4	Energy and Specific Energy	37
2.3.5	Current Density and Charge–Discharge Rate	37
2.3.6	Power and Specific Power	38
2.3.7	Coulombic Efficiency	38
2.3.8	Cycle Life	38
2.4	Interfacial Properties of Nanowires Electrode Materials	38
2.4.1	Interface Between Nanowire Electrode Materials and Electrolytes	38
2.4.2	Heterogeneous Interfaces in Nanowire Electrode Materials	40
2.5	Optimization Mechanism of Electrochemical Properties of Nanowires Electrode Materials	42
2.5.1	Mechanism of Electron/Ion Bicontinuous Transport	42
2.5.2	Self-Buffering Mechanism	44
2.6	Theoretical Calculation of Nanowires Electrode Materials	44
2.7	Summary and Outlook	48
	References	49
3	Design and Synthesis of Nanowires	51
3.1	Conventional Nanowires	51
3.1.1	Wet Chemical Methods	51
3.1.1.1	Hydrothermal/Solvothermal Method	52
3.1.1.2	Sol–Gel Method	53
3.1.1.3	Coprecipitation Method	54
3.1.1.4	Ultrasonic Spray Pyrolysis Method	55
3.1.1.5	Electrospinning Method	55
3.1.2	Dry Chemical Method	57
3.1.2.1	High-Temperature Solid-State Method	57
3.1.2.2	Chemical Vapor Deposition Method	58
3.1.3	Physical Method	59
3.2	Porous Nanowires	60
3.2.1	Template Method	60
3.2.1.1	Template by Nanoconfinement	60
3.2.1.2	Template by Orientation Induction	62
3.2.2	Self-Assembly Method	63
3.2.3	Chemical Etching Method	64
3.3	Hierarchical Nanowires	65
3.3.1	Self-Assembly Method	65
3.3.2	Secondary Nucleation Growth Method	68
3.4	Heterogeneous Nanowires	69
3.4.1	Heterogeneous Nucleation	69

3.4.2	Secondary Modification	71
3.5	Hollow Nanowires	73
3.5.1	Wet Chemical Method	73
3.5.2	Template Method	73
3.5.3	Gradient Electrospinning	76
3.6	Nanowire Arrays	79
3.6.1	Template Method	79
3.6.2	Wet Chemical Method	81
3.6.3	Chemical Vapor Deposition	83
3.7	Summary and Outlook	86
	References	88
4	Nanowires for In Situ Characterization	95
4.1	In Situ Electron Microscopy Characterization	95
4.1.1	In Situ Scanning Electron Microscopy (SEM) Characterization	95
4.1.2	In Situ Transmission Electron Microscope (TEM) Characterization	97
4.2	In Situ Spectroscopy Characterization	101
4.2.1	In Situ X-ray Diffraction	101
4.2.2	In Situ Raman Spectroscopy	106
4.2.3	In Situ X-ray Photoelectron Spectroscopy	108
4.2.4	In Situ XAS Characterization	108
4.3	In Situ Characterization of Nanowire Devices	111
4.3.1	Nanowire Device	111
4.3.2	Nanowire Device Characterization Example	111
4.4	Other In Situ Characterization	115
4.4.1	In Situ Atomic Force Microscopy Characterization	115
4.4.2	In Situ Nuclear Magnetic Resonance	117
4.4.3	In Situ Neutron Diffraction	119
4.4.4	In Situ Time-of-Flight Mass Spectrometry	121
4.5	Summary and Outlook	123
	References	124
5	Nanowires for Lithium-ion Batteries	131
5.1	Electrochemistry, Advantages, and Issues of LIBs Batteries	131
5.1.1	History of Lithium-ion Batteries	131
5.1.2	Electrochemistry of Lithium-ion Batteries	132
5.1.2.1	Theoretical Operation Potential	133
5.1.2.2	Theoretical Specific Capacity of Electrode Materials and Cells	133
5.1.2.3	Theoretical Specific Energy Density of an Electrochemical Cell	134
5.1.3	Key Materials for Lithium-ion Batteries	134
5.1.3.1	Cathode	134
5.1.3.2	Anode	135
5.1.3.3	Electrolyte	135
5.1.3.4	Separator	136
5.1.4	Advantages and Issues of Lithium-ion Batteries	137

5.2	Unique Characteristic of Nanowires for LIBs	138
5.2.1	Enhancing the Diffusion Dynamics of Carriers	138
5.2.2	Enhancing Structural Stability of Materials	138
5.2.3	Befitting the In Situ Characterization of Electrochemical Process	139
5.2.4	Enabling the Construction of Flexible Devices	139
5.3	Nanowires as Anodes in LIBs	139
5.3.1	Alloy-Type Anode Materials (Si, Ge, and Sn)	139
5.3.1.1	Lithium Storage in Si Nanowires	139
5.3.1.2	Lithium Storage in Ge Nanowires	142
5.3.1.3	Lithium Storage in Sn Nanowires	145
5.3.2	Metal Oxide Nanowires	146
5.3.3	Carbonaceous Anode Materials	148
5.4	Nanowires as Cathodes in LIBs	151
5.4.1	Transition Metal Oxides	151
5.4.2	Vanadium Oxide Nanowires	153
5.4.3	Iron Compounds Including Oxides and Phosphates	157
5.5	Nanowires-Based Separators in LIBs	160
5.6	Nanowires-Based Solid-State Electrolytes in LIBs	163
5.7	Nanowires-Based Electrodes for Flexible LIBs	168
5.8	Summary and Outlook	174
	References	175

6 Nanowires for Sodium-ion Batteries 185

6.1	Advantages and Challenges of Sodium-ion Batteries	185
6.1.1	Development of Sodium-ion Batteries	185
6.1.2	Characteristic of Sodium-ion Batteries	186
6.1.2.1	The Working Principle of Sodium-ion Battery	186
6.1.2.2	Advantages of Sodium-ion Batteries	186
6.1.3	Key Materials for Sodium-ion Batteries	187
6.1.3.1	Cathode	188
6.1.3.2	Anode	188
6.1.3.3	Electrolyte	189
6.1.3.4	Separator	189
6.1.4	Challenges for Sodium-ion Batteries	191
6.2	Nanowires as Cathodes in Sodium-ion Batteries	193
6.2.1	Layered Oxide Nanowires	193
6.2.2	Tunnel-type Oxide Nanowires	195
6.2.3	Polyanionic Compound Nanowires	196
6.3	Nanowires as Anodes in Sodium-ion Batteries	200
6.3.1	Carbonaceous Materials and Polyanionic Compounds	200
6.3.1.1	Graphitized Carbon Materials	200
6.3.1.2	Amorphous Carbon Materials	201
6.3.1.3	Carbon Nanomaterials	201
6.3.2	Polyanionic Compounds	203
6.3.3	Metals and Metal Oxides	206

6.3.3.1	Metal Nanowires	206
6.3.3.2	Transition Metal Oxide Nanowires	207
6.3.4	Metal Sulfides	215
6.3.4.1	Molybdenum Sulfide and Its Composites	216
6.3.4.2	Tungsten Sulfide and Its Composites	216
6.3.4.3	Stannic Sulfide and Its Composites	218
6.3.4.4	Nickel Sulfide, Ferrous Sulfide and Their Composites	218
6.4	Summary	220
	References	220
7	Application of Nanowire Materials in Metal-Chalcogenide Battery	229
7.1	Lithium–Sulfur Battery	230
7.1.1	Sulfur–Carbon Nanowire Composite Cathode Materials	231
7.1.2	Conductive Polymer Nanowire/Sulfur Composite Cathode Materials	236
7.1.3	Metal Compound Nanowires/Sulfur Composite Cathode Materials	237
7.2	Sodium–Sulfur Battery and Magnesium–Sulfur Battery	243
7.2.1	Sodium–Sulfur Battery	243
7.2.2	Magnesium–Sulfur Battery	247
7.3	Lithium–Selenium Battery	249
7.3.1	Reaction Mechanism of Lithium–Selenium Battery	250
7.3.2	Selenium-Based Cathode Materials	251
7.3.3	Existing Problems and Possible Solutions	256
7.4	Summary and Outlook	257
	References	258
8	Application of Nanowires in Supercapacitors	263
8.1	Nanowire Electrode Material for Electrochemical Double-Layer Capacitor	265
8.1.1	The Application of Carbon Nanotubes in EDLCs	266
8.1.2	The Application of Carbon Nanofibers in EDLCs	267
8.2	Nanowire Electrode Materials for Pseudocapacitive Supercapacitors	269
8.2.1	Metal Oxide Nanowire Electrode Materials	269
8.2.2	Conducting Polymer Nanowire Electrode Materials	271
8.3	Nanowire Electrode Materials of Hybrid Supercapacitors	272
8.3.1	Hybrid Supercapacitor Based on Aqueous Electrolyte	274
8.3.1.1	Carbon/Metal Oxide	274
8.3.1.2	Carbon/Conductive Nanowire Polymer	276
8.3.2	Other Electrolyte System Hybrid Supercapacitors	277
8.3.2.1	Organic Electrolyte System	277
8.3.2.2	Redox-Active Electrolyte System	278
8.3.3	Solid Electrolyte or Quasi-Solid-State Hybrid Supercapacitor	279

8.4	Summary and Outlook	279
	References	280
9	Nanowires for Multivalent-ion Batteries	285
9.1	Nanowires for Magnesium-Ion Battery	285
9.1.1	Vanadium-Based Nanowires for MIBs	286
9.1.2	Manganese-Based Nanowires for MIBs	289
9.1.3	Other Nanowires for MIBs	290
9.2	Nanowires for Calcium-Ion Batteries	292
9.3	Nanowires for Zinc-Ion Batteries	293
9.3.1	Vanadium-Based Nanowires for ZIBs	294
9.3.2	Manganese-Based Nanowires for ZIBs	295
9.4	Nanowires for Aluminum Ion Batteries	296
9.5	Summary and Outlook	298
	References	299
10	Conclusion and Outlook	305
10.1	Structure Design and Performance Optimization of 1D Nanomaterials	305
10.2	Advanced Characterization Methods for 1D Nanomaterials	308
10.3	Applications and Challenges of Nanowire Energy Storage Devices	314
10.3.1	Application of Nanowire Structures in Lithium-ion Batteries	314
10.3.2	Applications of Nanowire Structures in Na-ion Battery	315
10.3.3	Applications of Nanowire Structures in Other Monovalent-ion Batteries	316
10.3.4	Application of Nanowires in Lithium–Sulfur Batteries	316
10.3.5	Application of 1D Nanomaterials in Supercapacitors	318
10.3.6	Nanowires for Other Energy Storage Devices	319
10.3.6.1	Metal Air Batteries	319
10.3.6.2	Multivalent-ion Battery	320
10.3.6.3	Metal Sulfur Batteries	320
	References	322
	Index	327
