

Contents

Chapter 1 Introduction	1
1.1 Introduction	1
1.2 Blind Source Separation	1
1.3 Independent Component Analysis (ICA)	9
1.4 The Historical Development and Research Prospect of Blind Signal Processing	11
References	20
Chapter 2 Mathematical Description of Blind Signal Processing	27
2.1 Random Process and Probability Distribution	27
2.2 Estimation Theory	34
2.3 Information Theory	40
2.4 Higher-Order Statistics	44
2.5 Preprocessing of Signal	48
2.6 Complex Nonlinear Function	53
2.7 Evaluation Index	58
References	58
Chapter 3 Independent Component Analysis	60
3.1 Problem Statement and Assumptions	60
3.2 Contrast Functions	62
3.3 Information Maximization Method of ICA	67
3.4 Maximum Likelihood Method and Common Learning Rule	70
3.5 FastICA Algorithm	71
3.6 Natural Gradient Method	74
3.7 Hidden Markov Independent Component Analysis	77
References	82
Chapter 4 Nonlinear PCA & Feature Extraction	84
4.1 Principal Component Analysis & Infinitesimal Analysis	84

4.2	Nonlinear PCA and Blind Source Separation	87
4.3	Kernel PCA	89
4.4	Neural Networks Method of Nonlinear PCA and Nonlinear Complex PCA	91
	References	95
Chapter 5	Nonlinear ICA	97
5.1	Nonlinear Model and Source Separation	97
5.2	Learning Algorithm	99
5.3	Extended Gaussianization Method of Post Nonlinear Blind Separation	100
5.4	Neural Network Method for Nonlinear ICA	103
5.5	Genetic Algorithm of Nonlinear ICA Solution	105
5.6	Application Examples of Nonlinear ICA	106
	References	110
Chapter 6	Convulsive Mixtures and Blind Deconvolution	113
6.1	Description of Issues	113
6.2	Convulsive Mixtures in Time-Domain	114
6.3	Convulsive Mixtures Algorithms in Frequency-Domain	115
6.4	Frequency-Domain Blind Separation of Speech Convulsive Mixtures	122
6.5	Busgang Method	126
6.6	Multi-channel Blind Deconvolution	128
	References	130
Chapter 7	Blind Processing Algorithm Based on Probability Density Estimation	132
7.1	Advancing the Problem	132
7.2	Nonparametric Estimation of Probability Density Function	133
7.3	Estimation of Evaluation Function	141
7.4	Blind Separation Algorithm Based on Probability Density Estimation	142
7.5	Probability Density Estimation of Gaussian Mixtures Model	150
7.6	Blind Deconvolution Algorithm Based on Probability Density Function Estimation	155

7.7 On-line Algorithm of Nonparametric Density Estimation	163
References	172
Chapter 8 Joint Approximate Diagonalization Method	175
8.1 Introduction	175
8.2 JAD Algorithm of Frequency-Domain Feature	176
8.3 JAD Algorithm of Time-Frequency Feature	181
8.4 Joint Approximate Block Diagonalization Algorithm of Convulsive Mixtures	184
8.5 JAD Method Based on Cayley Transformation	188
8.6 Joint Diagonalization and Joint Non-Diagonalization Method	190
8.7 Nonparametric Density Estimating Separating Method Based on Time-Frequency Analysis	193
References	202
Chapter 9 Extension of Blind Signal Processing	205
9.1 Blind Signal Extraction	205
9.2 From Projection Pursuit Technology to Nonparametric Density Estimation-Based ICA	208
9.3 Second-Order Statistics Based Convulsive Mixtures Separation Algorithm	215
9.4 Blind Separation for Fewer Sensors than Sources— Underdetermined Model	225
9.5 FastICA Separation Algorithm of Complex Numbers in Convulsive Mixtures	252
9.6 On-line Complex ICA Algorithm Based on Uncorrelated Characteristics of Complex Vectors	259
9.7 ICA-Based Wigner-Ville Distribution	264
9.8 ICA Feature Extraction	269
9.9 Constrained ICA	278
9.10 Particle Filtering Based Nonlinear and Noisy ICA	282
References	290
Chapter 10 Data Analysis and Application Study	301
10.1 Target Enhancement in Active Sonar Detection	301
10.2 ECG Artifacts Rejection in EEG with ICA	312

10.3	Experiment on Underdetermined Blind Separation of A Speech Signal	317
10.4	ICA in Human Face Recognition	320
10.5	ICA in Data Compression	324
10.6	Independent Component Analysis for Functional MRI Data Analysis	333
10.7	Speech Separation for Automatic Speech Recognition System	342
10.8	Independent Component Analysis of Microarray Gene Expression Data in the Study of Alzheimer's Disease (AD).....	351
	References	359
Index	367
