| 11.11     | How Fast Does an Ion Move in the Electric Field? . . . . .                                                                                               | 167 |
| 11.12     | Summary . . . . .                                                                                                                                        | 168 |
| 11.13     | Test Questions . . . . .                                                                                                                                 | 170 |
| 11.14     | Exercises . . . . .                                                                                                                                      | 171 |
| <b>12</b> | <b>Electrodes</b> . . . . .                                                                                                                              | 173 |
| 12.1      | Motivation . . . . .                                                                                                                                     | 173 |
| 12.2      | What Happens When Electrons Are Transferred <u>into</u> the Electrolyte? . . . . .                                                                       | 173 |
| 12.3      | What Happens During the Transfer of Electrons <u>from</u> the Electrolyte? . . . . .                                                                     | 175 |
| 12.4      | How Much Conversion Takes Place at the Electrodes? . . . . .                                                                                             | 175 |
| 12.5      | How Large Is the Potential Jump at the Metal/Electrolyte Phase Boundary? . . . . .                                                                       | 176 |
| 12.6      | How Does Redox Potential Depend on Concentration? . . . . .                                                                                              | 177 |
| 12.7      | How Do We Use the Electrochemical Series? . . . . .                                                                                                      | 178 |
| 12.8      | How Do We Describe a First Type Electrode (Metal/Metal Salt)? . . . . .                                                                                  | 179 |
| 12.9      | How Do We Describe a Gas Electrode? . . . . .                                                                                                            | 180 |
| 12.10     | How Do We Determine Sign and Magnitude of the Open-Circuit Voltage ("EMF")? . . . . .                                                                    | 181 |
| 12.11     | How Is a Spontaneous Redox Reaction Different from a GALVANIC Cell? . . . . .                                                                            | 182 |
| 12.12     | How Large Is the Potential Jump at a Semipermeable Membrane? . . . . .                                                                                   | 183 |
| 12.13     | Summary . . . . .                                                                                                                                        | 184 |
| 12.14     | Test Questions . . . . .                                                                                                                                 | 185 |
| 12.15     | Exercises . . . . .                                                                                                                                      | 186 |
| <b>13</b> | <b>Service Section (Appendix)</b> . . . . .                                                                                                              | 189 |
| 13.1      | Solutions of the Tests and Exercises (The <i>motivational picture</i> of this chapter, Fig. 13.1, illustrates the submission of an assignment) . . . . . | 189 |
| 13.2      | Classical Lab Experiments in Physical Chemistry . . . . .                                                                                                | 220 |
| 13.3      | Suggestions for Workshop Designs . . . . .                                                                                                               | 232 |
| 13.4      | Links and QR Codes to the Multimedia Courses . . . . .                                                                                                   | 238 |
| 13.5      | List of Abbreviations . . . . .                                                                                                                          | 239 |
| 13.6      | Constants and Units . . . . .                                                                                                                            | 241 |
| 13.7      | Bond Enthalpies . . . . .                                                                                                                                | 242 |
| 13.8      | Thermodynamic Data . . . . .                                                                                                                             | 243 |
