1	Introduction	7
2	Least squares approximation	19
2.1	History	20
2.2	The method	21
2.3	Implementation	23
3	Reproducing kernel Hilbert spaces (RKHS)	25
3.1	Basic concepts of RKHSs	26
3.2	Constructing RKHSs from a given Mercer representation	29
3.3	Interlude on spectral theory of compact operators	33
3.4	Weak Mercer representation for RKHSs compactly embedded into L_2	36
3.5	Examples in one dimension	39
3.5.1	Sobolev spaces on the torus $\mathbb{T}$	40
3.5.2	Sobolev spaces on the interval $[0, 1]$	42
3.5.3	Jacobi polynomials on the interval $[-1, 1]$	57
3.6	Extension to higher dimensions	61
3.6.1	Isotropic Sobolev spaces on the torus $\mathbb{T}^d$	61
3.6.2	Sobolev spaces with dominating mixed smoothness	65
3.6.3	Truncated ANOVA decomposition	66
4	Concentration inequalities	69
4.1	Concentration inequalities for random vectors	69
4.2	Concentration inequalities for the spectral norm of (infinite) matrices	76
5	Subsampling of finite frames	79
5.1	Random weighted subsampling of finite frames	80
5.2	Deterministic weighted subsampling of finite frames	82
5.3	Non-weighted subsampling of finite frames	90
5.4	Numerical experiments	96
6	L_2-Marcinkiewicz-Zygmund (MZ) inequalities	105
6.1	Random L_2 -MZ inequalities	108
6.2	Examples of deterministic L_2 -MZ inequalities	110
6.3	Subsampling of L_2 -MZ inequalities	114

7	Least squares in the worst-case setting	119
7.1	Sampling recovery in spaces of finite measure	120
7.2	Sampling recovery in RKHSs	122
7.2.1	Optimal sampling complexity with unstructured points	122
7.2.2	Sampling recovery with L_2 -MZ points	128
7.2.3	Sampling recovery with subsampled L_2 -MZ points .	131
7.3	Application on the torus $\mathbb{T}^d$ with rank-1 lattices	137
7.4	Comparison to the kernel method	143
8	Least squares in statistical learning	147
8.1	Basic concepts in statistical learning	148
8.2	Error guarantees for least squares approximation	150
8.3	Application on the unit interval $[0, 1]$	157
8.3.1	Analysis	157
8.3.2	Numerical Experiments	159
8.4	Numerical experiment on the unit cube $[0, 1]^d$	162
8.5	Comparison to other methods	164
9	Cross-validation	167
9.1	Concentration of the cross-validation score	168
9.2	Fast cross-validation for least squares approximation	178
9.3	Numerical experiments	184
9.3.1	Numerical experiment on the torus $\mathbb{T}$	184
9.3.2	Numerical experiment on the unit cube $[0, 1]^d$	186
10	Outlook	189
	List of Symbols	191
	Bibliography	193
