

VIII/2A Powder Metallurgy Data

Part 1: Metals and Magnets

Contents

1 Introduction	1-1
2 Metal powders	2-1
2.1 Introduction	2-1
2.2 Production technology	2-2
2.2.1 Oxide reduction	2-2
2.2.2 Electrolysis	2-4
2.2.2.1 Introduction	2-4
2.2.2.2 Electrodeposition of copper powder – basic considerations	2-4
2.2.2.3 Electrodeposition of copper powder – industrial realisation	2-6
2.2.2.4 Further processing steps	2-7
2.2.3 Thermal decomposition	2-8
2.2.4 Atomisation	2-9
2.2.4.1 Basic considerations	2-10
2.2.4.1.1 Performance of atomisers	2-10
2.2.4.1.2 Particle size distribution parameters	2-10
2.2.4.1.3 Sphericity or particle shape	2-10
2.2.4.1.4 Purity	2-11
2.2.4.1.5 Other powder parameters	2-12
2.2.4.1.6 Yield	2-12
2.2.4.1.7 Productivity	2-12
2.2.4.1.8 Flexibility	2-13
2.2.4.1.9 Robustness	2-13
2.2.4.2 Gas and air atomisation	2-13
2.2.4.2.1 Efficiency of gas (and air) atomisers	2-13
2.2.4.2.2 Basic types of gas atomiser	2-14
2.2.4.2.3 Novel possibilities	2-19
2.2.4.2.4 Advanced gas atomisation technology	2-20
2.2.4.3 Water atomisation	2-23
2.2.4.3.1 Basic types of water atomiser	2-23
2.2.4.3.2 Performance	2-24
2.2.4.3.3 Industrial production	2-25
2.2.4.4 Economics of atomisation	2-27
2.2.5 Alloying methods	2-30
2.3 Powder characterisation	2-30
2.4 Metal powder types and data	2-32
2.4.1 Iron base powders	2-32
2.4.2 Copper base powders	2-37
2.5 References for 2	2-40
3 Forming	3-1
3.1 Introduction	3-1
3.2 Uniaxial compaction in rigid dies	3-1
3.2.1 Die compaction of powders with green strength	3-1
3.2.2 Newer developments and emerging technologies in die compaction	3-9
3.2.3 Die compaction with consolidation	3-9

3.2.4 Powder forging	3-11
3.3 Isostatic and pseudoisostatic compaction	3-14
3.3.1 Cold isostatic pressing	3-14
3.3.2 Hot isostatic pressing	3-17
3.3.3 Pseudo-HIP processes	3-19
3.3.3.1 STAMP process	3-19
3.3.3.2 Consolidation by atmospheric pressure	3-20
3.3.3.3 Rapid omnidirectional compaction	3-21
3.3.3.4 Ceracon process	3-22
3.3.3.5 Ceramic mold process	3-23
3.4 Forming of binder treated powders	3-24
3.4.1 Metal injection molding	3-24
3.4.2 Binder assisted extrusion	3-26
3.4.3 Slip casting and wet powder processing	3-27
3.4.4 Tape Casting	3-28
3.5 Spray forming	3-28
3.5.1 Billets	3-28
3.5.2 Claddings and ring shapes	3-29
3.5.3 Preforms, slabs and strips	3-30
3.6 Continuous forming	3-30
3.6.1 Powder rolling	3-30
3.6.2 Conform extrusion	3-31
3.7 Gravity sintering	3-32
3.8 Billet processing and hot working	3-33
3.9 Conclusions	3-35
3.10 References for 3	3-36
 4 Semifinished products	 4-1
4.1 Hot isostatically pressed tool steels	4-1
4.1.1 Heat treatment	4-2
4.1.2 Alloying effects	4-6
4.1.3 Chemical composition	4-9
4.1.4 Microstructure	4-13
4.1.5 Mechanical properties	4-16
4.1.6 Physical properties	4-26
4.1.7 References for 4.1	4-34
4.2 Spray forming	4-43
4.2.1 Copper alloys	4-44
4.2.1.1 Materials for sliding applications	4-45
4.2.1.2 Machinable materials	4-47
4.2.1.3 High strength materials	4-48
4.2.1.4 Anisotropy	4-50
4.2.2. Aluminum Alloys	4-52
4.2.2.1 High strength alloys (7xxx series)	4-54
4.2.2.2 Elevated temperature alloys (2xxx series)	4-55
4.2.2.3 Wear resistant alloys (4xxx series)	4-56
4.2.3 Tool steels	4-57
4.2.4 References for 4.2	4-60
 5. Structural mass production parts	 5-1
5.1 Introduction	5-1
5.2 Manufacturing route	5-1
5.3 Iron and steel	5-3

5.3.1 Raw materials	5-3
5.3.2 Data evaluation	5-4
5.3.3 Elastic properties	5-7
5.3.4 Hardness and tensile properties	5-10
5.3.4.1 Unalloyed iron	5-14
5.3.4.2 Binary alloys	5-14
5.3.4.3 Ternary alloys	5-15
5.3.4.4 Quaternary alloys	5-16
5.3.4.5 Higher order alloys	5-17
5.3.5 Impact Energy	5-124
5.3.6 Fatigue strength	5-136
5.3.6.1 Effect of density in the as-sintered condition	5-138
5.3.6.2 Stress concentrations	5-157
5.3.6.3 Effect of heat treatments	5-159
5.3.6.4 Effect of mean stress	5-160
5.3.6.5 Miscellaneous relationships	5-167
5.3.6.6 Rolling contact fatigue	5-169
5.3.7 Thermophysical properties	5-171
5.3.7.1 Thermal expansion and density	5-172
5.3.7.2 Specific heat	5-174
5.3.7.3 Thermal conductivity	5-176
5.3.7.4 Thermal diffusivity	5-179
5.4 Non-ferrous materials	5-181
5.4.1 Copper and copper alloys	5-181
5.4.2 Aluminum alloys	5-187
5.5 Summary	5-189
5.6 References for 5	5-190
 6 Metal injection moulding	 6-1
6.1 Introduction	6-1
6.2 Technology	6-2
6.2.0 Process outline	6-2
6.2.1 Powder and feedstock	6-3
6.2.1.1 Powder	6-3
6.2.1.2 Binder systems	6-5
6.2.1.3 Feedstock	6-5
6.2.2 Moulding	6-7
6.2.2.1 Introduction	6-7
6.2.2.2 Moulding equipment	6-8
6.2.2.3 Requirements and possibilities	6-11
6.2.2.4 Moulding conditions	6-13
6.2.3 Debinding	6-14
6.2.4 Sintering	6-16
6.2.4.1 Introduction	6-16
6.2.4.2 Equipment	6-17
6.2.4.3 Sinter Regime	6-17
6.2.5 Final treatment	6-19
6.3 Materials	6-20
6.3.1 Properties	6-20
6.3.2 Tolerances and criteria of MIM processing	6-23
6.3.3 MIM defects	6-24
6.4 Applications	6-25
6.5 Comparison of technological alternatives	6-28
6.6 References for 6	6-32

7 Powder metallurgical filters	7-1
7.1 Introduction	7-1
7.2 Materials and production of metal filters	7-1
7.2.1 Bronze powder products	7-1
7.2.2 Stainless steel and nickel base powder products	7-2
7.2.3 Stainless steel fiber products	7-2
7.3 Characterization of metallic filtration materials	7-2
7.3.1 Mechanical strength and density	7-3
7.3.2 Permeability	7-4
7.3.3. Average CCE pore diameter	7-5
7.3.4 Bubble test pore size	7-5
7.3.5 Pore size distribution	7-5
7.3.6 Filtration efficiency	7-6
7.4 Data	7-6
7.5 Tables for 7	7-8
7.6 Figures for 7	7-22
7.7 References for 7	7-24
8 Friction materials	8-1
8.1 Introduction	8-1
8.2 Raw materials used in the production of friction materials	8-1
8.2.1 Base materials	8-2
8.2.1 Solid state lubricants	8-2
8.2.3 Friction modifiers	8-3
8.3 Production methods	8-4
8.3.1 Pressing techniques	8-5
8.3.2 Spreading techniques	8-6
8.4 Properties and applications	8-7
8.4.1 Friction material requirements	8-7
8.4.2 Methods of friction testing	8-7
8.4.3 Applications under dry condition	8-7
8.4.4 Railway applications	8-10
8.4.5 Applications under wet conditions	8-12
8.5 References for 8	8-15
9 Magnetic materials	9-1
9.1 Introduction	9-1
9.2 Soft magnetic sintered and composite materials	9-3
9.2.1 Introduction	9-3
9.2.2 Sintered soft magnetic materials	9-3
9.2.2.1 Sintered soft magnetic iron	9-5
9.2.2.2 Sintered soft magnetic iron/phosphorous	9-8
9.2.2.3 Sintered soft magnetic iron/silicon	9-13
9.2.2.4 Sintered soft magnetic iron/silicon/phosphorous	9-15
9.2.2.5 Sintered soft magnetic iron/tin/phosphorous	9-16
9.2.2.6 Sintered soft magnetic iron/nickel	9-17
9.2.2.7 Sintered soft magnetic iron/ chromium	9-18
9.2.2.8 Sintered soft magnetic iron/cobalt	9-19
9.2.2.9 Processing operations	9-20
9.2.2.10 Applications	9-22
9.2.3 Composite soft magnetic materials	9-23
9.2.3.1 Soft magnetic iron composites for low to medium frequency	9-25
9.2.3.1.1 Applications	9-33
9.2.3.2 Soft magnetic composites for medium to high frequency	9-34

9.2.3.2.1 Soft magnetic electrolytic iron	9-34
9.2.3.2.2 Soft magnetic composites based on pure iron particles	9-36
9.2.3.2.3 Soft magnetic composites based on alloyed particles	9-38
9.2.3.2.4 Applications	9-38
9.2.4 Soft magnetic ferrites	9-39
9.3 Hard magnetic sintered and bonded materials	9-45
9.3.1 Introduction	9-45
9.3.2 Alnico	9-48
9.3.3 Co-Sm	9-50
9.3.3.1 5/1 type magnets	9-53
9.3.3.2 17/2 type magnets	9-55
9.3.4 Fe - Nd - B	9-60
9.3.5 Mn - Al - C	9-68
9.3.6 Hard magnetic ferrites	9-70
9.3.7 Bonded magnets	9-72
9.3.7.1 Introduction	9-72
9.3.7.2 Hexagonal ferrite, MOFe ₁₂ O ₁₈ (M:Ba,Sr) base	9-75
9.3.7.3 Nd ₂ Fe ₁₄ B base	9-81
9.3.7.4 Al-Ni-Fe base isotropic magnets	9-82
9.4 References for 9	9-83
10 Contact materials	10-1
10.1 Introduction	10-1
10.2 Symbols and abbreviations used in chapter 10	10-2
10.3 Composites based on Silver	10-2
10.3.1 Silver/nickel and silver/iron	10-2
10.3.2 Silver metal oxides	10-5
10.3.2.1 Silver/ tin oxide	10-7
10.3.2.2 Silver/Cadmium Oxide	10-8
10.3.2.3 Silver/zinc oxide	10-9
10.3.3 Silver/graphite and copper/graphite	10-9
10.3.4 Silver/tungsten, silver/tungsten carbide and silver/molybdenum	10-11
10.3.5 Switching behaviour of silver based materials in air	10-12
10.4 Composites based on copper	10-18
10.4.1 Copper/tungsten	10-18
10.4.2 Copper/tungsten carbide	10-20
10.4.3 Copper/chromium and copper/iron	10-20
10.4.4 Switching behaviour of copper based composites	10-21
10.4.4.1 Switching in SF ₆ atmosphere, oil or air	10-21
10.4.4.2 Switching in vacuum	10-23
10.5 Composites based on graphite	10-24
10.5.1 Sliding contacts	10-25
10.6 Pure metals	10-26
10.7 References for 10	10-27
11 Beryllium	11-1
11.1. Introduction	11-1
11.1.1. Characteristic properties	11-1
11.1.2 Occurrence, refining and production processes	11-1
11.1.3 Material classes	11-2
11.1.4 Applications	11-3
11.2 Data	11-5
11.3 Safety and health	11-10
11.4 References for 11	11-11
