## Introduction

|                                                                           |        |
|---------------------------------------------------------------------------|--------|
| <b>1 Preface</b>                                                          | IX     |
| 1.1 Electromagnetic interactions                                          | IX     |
| 1.2 Radial moments, electronic factor $F$ and mass factor $M$             | X      |
| <b>2 Optical spectroscopy</b>                                             | XII    |
| 2.1 Isotope shifts and mean square nuclear charge radii                   | XII    |
| 2.2 Evaluation of optical measurements (King plots)                       | XIII   |
| 2.3 Quality of optical measurements                                       | XIV    |
| 2.4 Policy of selecting lines                                             | XIV    |
| 2.5 Terminology                                                           | XVI    |
| 2.6 Sign convention                                                       | XVII   |
| <b>3 K X-ray spectroscopy</b>                                             | XVIII  |
| <b>4 Muonic atom spectroscopy</b>                                         | XIX    |
| <b>5 High energy elastic electron scattering measurements</b>             | XXIV   |
| <b>6 Combined analysis</b>                                                | XXVI   |
| <b>7 List of review articles dealing with nuclear charge radii</b>        | XXXI   |
| <b>8 References for the Introduction</b>                                  | XXXIV  |
| <b>9 List of RMS Nuclear Charge Radii determined by combined analysis</b> | XXXVII |

## Tables of Elements arranged by number of protons $Z$

### Z.1 Input Data

- Z.1.1 Optical measurements
  - Z.1.1.1 Isotope shifts
  - Z.1.1.2 Projection line
    - Fig.1** Isotope positions of stable isotopes
- Z.1.2 K X-ray measurements
- Z.1.3 Muonic atom data
  - Z.1.3.1 Muonic transition energies, muonic Barrett radii and RMS-radii
  - Z.1.3.2 Differences of Barrett-radii
- Z.1.4 Elastic electronic scattering
  - Z.1.4.1 Parameters of the charge distribution
  - Z.1.4.2 Ratio of radial moments
- Z.1.5 Check of consistency of the input data and preselection
  - Fig.2** Consistency check
- Z.1.6 Seltzer's coefficients

### Z.2 Results from combined analysis

- Z.2.1 King plot
  - Fig.3** King plot of optical versus combined muonic plus electron scattering results
- Z.2.2 Optical data for the projection line
- Z.2.3 RMS charge radii  $\langle r^2 \rangle^{1/2}$  of all isotopes
  - Fig.4**  $\langle r^2 \rangle^{1/2}$
- Z.2.4 Change of mean square charge radii  $\delta \langle r^2 \rangle$  and nuclear radius parameter  $A$  of all isotopes
  - Fig.5**  $\delta \langle r^2 \rangle$

### Z.3 References for Element ( $Z$ )
