

Contents

1	Introduction	1-1
1.1	Fundamental principles and basic relations	1-2
1.1.1	Basic thermodynamic equations	1-2
1.1.2	Residual functions.	1-3
1.1.3	Excess functions	1-4
1.1.4	Experimentally accessible thermodynamic quantities	1-5
1.1.5	Calorimetric measurements of the heat of mixing	1-6
1.1.6	Enthalpies of solution of gases in liquids	1-6
1.2	Calorimetric measurement of the enthalpy of solution of gases in liquids	1-8
1.2.1	Batch solution calorimeters	1-8
1.2.2	Isothermal solution calorimeters.	1-8
1.2.3	Flow mixing calorimeters	1-8
1.2.4	Injection calorimeters	1-9
1.3	Principles of heat of mixing calorimetry and types of calorimeter	1-10
1.3.1	Low pressure gas mixing flow calorimetry	1-10
1.3.2	High pressure gas mixing flow calorimetry	1-10
1.3.3	Calorimeters for mixing fluids in the two-phase and supercritical regions	1-10
1.3.4	Coiled tube high pressure flow calorimetry	1-11
1.4	Analysis of excess enthalpies of gas mixtures at low pressures	1-12
1.4.1	Weakly polar gases	1-13
1.4.2	Second virial coefficients from excess enthalpies	1-14
1.4.3	Associated gas mixtures at low pressures	1-15
1.5	Analysis of enthalpies of mixing of fluids at high pressures	1-16
1.5.1	The virial equation of state at high pressures	1-16
1.5.2	A two-fluid model for high pressure calculations	1-17
1.5.3	Cubic equations of state	1-18
1.5.4	Heats of mixing in the liquid and supercritical regions	1-18
1.5.5	Heats of mixing across a two-phase region	1-19
1.5.6	Binary mixture for which the critical temperatures are almost equal.	1-19
1.5.7	Binary mixture for which the critical pressures are almost equal	1-20
1.6	Correlation of experimental data	1-20
2	Tables on heats of mixing and solution	2-1
2.1	Introduction	2-1
2.1.1	Property types	2-2
2.2	Organic systems	2-6
2.3	Carbon dioxide – organic systems	2-55
2.4	Aqueous-organic systems	2-88
2.5	Systems containing inorganic substances	2-113

3	Instructions on using the computer program ELBT	3-1
3.1	Introduction	3-1
3.2	System requirements	3-1
3.3	Installing the program	3-1
3.4	To start	3-2
3.5	Visualization of numerical data	3-4
3.5.1	PDF display	3-4
3.5.2	SELF (Standard Electronic File) display	3-4
3.5.2.1	SELF structure. Identifiers	3-4
3.5.2.2	Physical quantities and physico-chemical properties	3-7
3.5.2.3	Independent variables and dependent variables	3-7
3.5.2.4	Parameters	3-7
3.5.2.5	Symbols, units and scales of physical quantities	3-8
3.5.2.6	Numerical data and estimated uncertainties	3-8
3.5.2.7	Two-phase fluid-fluid systems	3-9
3.5.2.8	Linked data files	3-9
3.5.3	ELDATA display	3-10
3.5.3.1	Selection of units	3-11
3.5.4	Graphical display	3-11
3.5.5	Correlating experimental data	3-11
3.5.6	Output of correlated experimental data	3-15
3.6	Creating SpreadsheetML documents	3-19
4	Indexes	4-1
4.1	Formula index of substances	4-2
4.2	Name index of substances	4-4
4.3	Class index of organic substances	4-9
4.4	Class index of organic systems	4-10
4.5	Class index of carbon dioxide-organic systems	4-15
4.6	Class index of aqueous-organic systems	4-17
4.7	Index of systems containing inorganic substances	4-19
4.8	Formula index of systems	4-22
5	General references	5-1
