Preface — V

Part A: Microscopic instruments

Chapter 1

Optical microscopy — 3

- 1.1 Introduction — 3
- 1.1.1 Geometrical optics — 4
- 1.1.2 Formation of optical image — 4
- 1.1.3 Resolution in case of optical microscope — 6
- 1.1.4 Diffraction grating — 7
- 1.1.5 Resolution and numerical aperture — 7
- 1.1.6 Depth of focus and depth of field — 9
- 1.2 Construction of the microscope — 9
- 1.3 Image observation and sensitivity of recording — 12
- 1.4 Specimen preparation — 16
- 1.5 Image contrast — 21
- 1.6 Working with computerized images — 27
- 1.6.1 Data collection — 27
- 1.6.2 Data processing and its analysis — 27
- 1.6.3 Storage of data and its presentation — 28
- 1.6.4 Computerized storage — 29
- 1.7 Image interpretation — 31
- 1.8 Illustrative example on characterization of nanocomposites through optical microscopy — 31
- 1.9 Conclusion — 32

Chapter 2

Transmission electron microscopy — 34

- 2.1 Introduction — 34
- 2.2 Basic principles — 37
- 2.2.1 Wave properties — 37
- 2.2.2 Resolution limits and aberrations associated with a lens system — 39
- 2.3 A comparative analysis between the scanning electron microscope and the transmission electron microscope — 41
- 2.4 Sample preparation — 43
- 2.4.1 Mechanical thinning — 44
- 2.4.2 Electrochemical thinning — 46

2.4.3	Ion milling —	46
2.4.4	Carbon and sputter coating —	48
2.4.5	Replica methods —	48
2.5	The origin of contrast —	50
2.5.1	Mass-thickness contrast —	51
2.5.2	Diffraction contrast —	51
2.5.3	Phase contrast —	53
2.6	Lattice imaging at high resolution —	56
2.6.1	Lattice image and contrast transfer function —	56
2.6.2	Computer simulation of lattice images —	57
2.6.3	Lattice image interpretation —	59
2.7	Application of TEM for carbon materials —	60
2.8	Conclusion —	62

Chapter 3

Scanning electron microscope — 65

3.1	Introduction —	65
3.2	Components of a scanning electron microscope —	65
3.2.1	Interaction between the electron ray and the specimen —	67
3.2.2	Conditions associated with ray focusing —	68
3.2.2.1	The energy loss and inelastic dispersion —	70
3.2.3	Excitation of electrons associated with the X-rays —	70
3.2.3.1	Backscattered electrons —	76
3.2.3.2	Image contrast associated with the images from the backscattered electrons —	77
3.3	Scanning electron emission —	78
3.4	Different imaging modes —	81
3.5	Preparation of a specimen and the associated topology —	82
3.5.1	Sputter coating —	83
3.5.2	Failure analysis and fractography —	83
3.6	The process of stereoscopic imaging —	84
3.7	Measurement of parallax —	85
3.8	Illustrative examples —	86
3.9	Conclusion —	87

Chapter 4

Scanning probe microscopy — 91

4.1	Introduction —	91
4.1.1	Surface forces —	91
4.2	Scanning probe microscopes —	94
4.2.1	Atomic force microscopy —	96

- 4.2.2 Scanning tunneling microscopy — 98
- 4.2.3 Field-ion microscopy — 99
- 4.3 Conclusion — 102

Chapter 5

X-ray diffraction analysis — 104

- 5.1 Introduction — 104
 - 5.1.1 Radiation scattering by crystals — 104
 - 5.1.2 Laue equations and Bragg's law — 105
 - 5.1.3 Allowed and Forbidden wavelength reflections — 107
 - 5.1.4 Complementary space — 108
 - 5.1.5 The construction of limiting sphere — 109
 - 5.1.6 Bragg's law and its vector representation — 109
 - 5.1.7 The commentary lattice — 109
- 5.2 Methods for X-ray diffraction — 110
- 5.3 The X-ray diffractometer — 111
 - 5.3.1 Powder diffractions — 115
 - 5.3.2 Single crystal Laue diffraction — 117
 - 5.3.3 Rotating single crystal methods — 118
- 5.4 Diffraction analysis — 118
 - 5.4.1 Atomic scattering factors — 118
 - 5.4.2 Scattering associated with the unit cell — 119
 - 5.4.3 Interpretation of the intensities diffracted — 120
 - 5.4.4 Errors and assumptions made — 121
- 5.5 Illustrative example — 125
- 5.6 Conclusion — 128

Part B: Spectroscopic instruments

Chapter 6

Fourier transform infrared (FT-IR) spectrometer — 133

- 6.1 Introduction — 133
- 6.2 Instrumental details and working — 133
 - 6.2.1 Radiation source — 133
 - 6.2.1.1 Globar sources — 134
 - 6.2.1.2 Nernst glowers — 134
 - 6.2.2 Infrared detectors — 136
 - 6.2.2.1 Thermal detectors — 136
 - 6.2.2.2 Photon detectors or quantum detectors — 137
 - 6.2.2.3 Mercury Cadmium Telluride — 137
- 6.2.3 Michelson interferometer — 138

6.3	Sample preparation —	139
6.3.1	Transmission sampling —	140
6.3.1.1	Transmission sampling of solids and powders —	140
6.3.1.2	Transmission sampling of liquids —	141
6.3.1.3	Transmission sampling of gases —	142
6.3.2	Reflectance sampling —	143
6.4	Data handling —	144
6.4.1	Apodization —	144
6.4.2	Resolution —	144
6.4.3	Phase correction —	144
6.4.4	Mirror misalignment —	145
6.5	Data interpretation —	145
6.5.1	Calibration —	146
6.5.2	Prediction —	146
6.5.3	Measurement of absorbance —	147
6.6	FT-IR spectroscopy: Nanofillers and nanocomposites —	147
6.6.1	Identification of metal oxide nanofillers —	147
6.6.2	Identification of carbonaceous nanofillers —	149
6.6.3	Identification in GO/ZnO nanocomposites —	150
6.6.4	Identification in case of polymeric nanocomposites —	151
6.7	Conclusion —	154

Chapter 7

Raman spectrometer — 155

7.1	Introduction —	155
7.2	Instrumental detail, working, and handling of the Raman spectroscopy —	156
7.2.1	Excitation source —	157
7.2.2	Continuous wave lasers —	158
7.2.3	Neodymium-YAGs —	158
7.2.4	Diode lasers —	158
7.3	Sample illumination and collection —	159
7.3.1	Wavelength selector —	159
7.3.2	Monochromators —	160
7.4	FT Raman spectroscopy —	160
7.4.1	Detection of the Raman spectrum —	161
7.4.1.1	Photon counting —	161
7.4.1.2	Photodiode array —	162
7.4.1.3	Charge coupled device (CCD) —	162
7.5	Sample preparation —	164
7.6	Sample handling —	165
7.7	Data handling and interpretation —	166

- 7.7.1 Quantitative interpretation — 167
- 7.7.2 Qualitative interpretation — 168
- 7.8 Examples of Raman spectroscopy — 169
- 7.8.1 Raman spectroscopy on polystyrene nanocomposites with single-walled carbon nanotubes — 169
- 7.8.2 Raman spectroscopy on analyzing the interfacial load transfer in case of graphene-based nanocomposites — 172
- 7.9 Conclusions — 176

Chapter 8

X-ray photoelectron spectroscopy — 177

- 8.1 Introduction — 177
- 8.2 Instrumental details and working — 177
 - 8.2.1 Vacuum systems — 178
 - 8.2.2 X-ray sources — 179
 - 8.2.2.1 Standard sources — 180
 - 8.2.2.2 Monochromatic sources — 180
 - 8.2.2.3 Synchrotron sources — 181
 - 8.2.3 Energy analyzer — 181
 - 8.2.4 Cylindrical mirror analyzer (CMA) — 181
 - 8.2.5 Concentric hemispherical analyzer (CHA) — 182
 - 8.2.6 Detectors — 183
 - 8.2.7 Electron multipliers — 184
 - 8.2.8 Channeltrons — 185
- 8.3 Sample preparation — 185
- 8.4 Data analysis and interpretation — 187
 - 8.4.1 Pre-alignment — 187
 - 8.4.2 Background signals — 188
 - 8.4.3 Quantification — 188
- 8.5 Examples on XPS — 189
 - 8.5.1 XPS study of PPy — 189
 - 8.5.2 XPS study of PPy-WO₃ nanocomposites — 190
- 8.6 Conclusion — 192

Chapter 9

Ultraviolet photoelectron spectroscopy — 193

- 9.1 Introduction — 193
- 9.2 Instrumental details and working — 194
 - 9.2.1 Radiation source — 194
 - 9.2.2 Atomic line radiation — 194
 - 9.2.3 Synchrotrons — 196
 - 9.2.4 Monochromators — 196

9.2.5	Vacuum requirements —	198
9.2.6	Energy analyzer —	198
9.2.7	Electron detectors —	199
9.3	Sample analysis —	200
9.3.1	Sample surface analysis —	200
9.3.2	Photoelectron intensities —	201
9.3.3	UV spectra and their interpretation —	203
9.4	Examples on UV-Vis spectrum —	204
9.4.1	Metallic nanoparticles as nanofillers —	204
9.5	Conclusion —	208

Chapter 10

Fluorescence spectroscopy — 210

10.1	Introduction —	210
10.2	Instrumental details —	211
10.2.1	Light source —	211
10.2.2	Monochromator —	212
10.2.3	Flexible cell housing —	212
10.2.3.1	Detection system —	212
10.2.3.2	Correction system —	212
10.2.3.3	Polarizer —	213
10.2.4	Phosphorimeter attachment —	214
10.3	Experimental sample handling and holders —	214
10.3.1	Working with dilute solutions —	216
10.4	Spectral analysis and interpretation of fluorescence —	216
10.4.1	Inner filter effect —	218
10.4.2	Fluorescence excitation spectrum —	218
10.4.3	Mirror image rule —	219
10.4.4	Fluorescence and light diffusion —	219
10.4.4.1	Fluorescence lifetime —	220
10.4.4.2	Fluorescence lifetime measurements —	221
10.5	Examples on fluorescence studies for polymeric nanocomposites —	222
10.6	Conclusion —	225

Chapter 11

Nuclear magnetic resonance spectroscopy — 226

11.1	Introduction —	226
11.2	Instrumental details and working —	226
11.2.1	Powerful magnets —	227
11.2.2	Probe —	229
11.2.3	Sweep coils and recorder —	229
11.2.4	Few other useful accessories —	230

11.3	Sample preparation, loading, and handling —	231
11.3.1	Sample preparation —	231
11.3.2	Sample tube placement —	232
11.3.3	Referencing —	232
11.3.4	Integration —	232
11.3.5	Field/frequency locking —	233
11.3.6	Spectrometer operation —	233
11.3.7	Measurements of relaxation times —	234
11.4	Analysis of NMR spectra —	234
11.4.1	Chemical shift —	234
11.4.2	Coupling constant —	235
11.4.3	First-order spectra —	236
11.4.4	Second-order spectra —	237
11.5	Example for NMR of polymeric nanocomposites —	237
11.6	Conclusion —	241
