Part I Foundations of Thermodynamics and Chemistry

1 Introduction	3
1.1 Preface	3
1.2 Model-Building	3
1.3 Simulation	5
References	8
2 Reciprocating Engines	9
2.1 Energy Conversion	9
2.2 Geometry of the Crankshaft Drive	9
2.3 Thermodynamics of the Internal Combustion Engine	15
2.3.1 Foundations	15
2.3.2 Closed Cycles	20
2.3.3 Open Comparative Processes	27
2.4 Parameters and Characteristic Values	30
2.5 Engine Maps	34
2.5.1 Spark Ignition Engines	34
2.5.2 Diesel Engines	36
References	37
3 Combustion Diagnostics	39
3.1 Basics of Pressure Measurements	39
3.1.1 Preface	39
3.1.2 The Piezoelectric Measurement Chain	42
3.1.3 Assembly Variants	59
3.1.4 Selection of the Measurement Location	63
3.1.5 Adjusting the Pressure Level: Zero Level Correction (Pegging)	66
3.1.6 Methods That Measure Absolute Pressure	70

3.1.7	Angle and Trigger Marking	71
3.1.8	TDC Assignment	75
3.1.9	Pressure Indication in the Inlet and Outlet System	78
3.1.10	Data Capture	81
3.2	Pressure Trace Analysis and Loss Distribution	81
3.2.1	Determination of the Heat Release Rate	82
3.2.2	Loss Distribution	86
3.2.3	Case Study: Comparison of Various Combustion Processes	89
3.3	Optical Diagnostic Techniques	91
3.3.1	Introduction	91
3.3.2	Optical Methods: An Overview	92
3.3.3	Application Examples of Optical Methods	93
3.3.4	Diesel Engines	93
3.3.5	SI Engines Optical Diagnostics	99
3.3.6	Laser Based Measurement Techniques	113
3.3.7	Optical Combustion Diagnostics: Status and Forecast	114
References		115
4	Engine Combustion	119
4.1	Fuels	119
4.1.1	Gasoline and SI Engine Fuels	123
4.1.2	Diesel Fuels	124
4.1.3	Alternative Fuels	125
4.2	Diesel Engines	126
4.2.1	Injection Methods and Systems	127
4.2.2	Mixture Formation	134
4.2.3	Autoignition and the Combustion Sequence	138
4.3	Spark Ignition Engines	142
4.3.1	Differences Between Premixed Flame and Diffusion Combustion	142
4.3.2	Ignition	143
4.3.3	Flame Front Propagation After Ignition, the Effect of Turbulence	146
4.3.4	Information About Combustion Speed from the Heat Release Rate	148
4.3.5	Irregular Combustion	149
4.3.6	Combustion Process, Mixture Formation, Modes of Operation	154
References		167
5	Reaction Kinetics	169
5.1	Foundations	169
5.1.1	Chemical Equilibrium	169

5.1.2	Reaction Rate	173
5.1.3	Partial Equilibrium and Quasi-Steady-State	174
5.2	Reaction Kinetics of Hydrocarbons	176
5.2.1	Oxidation of Hydrocarbons	176
5.2.2	Ignition Processes	179
5.2.3	Reaction Kinetics in Engine Simulation	185
	References	191
6	Pollutant Formation	193
6.1	Exhaust Gas Composition	193
6.2	Carbon Monoxide	195
6.3	Unburned Hydrocarbons	196
6.3.1	Sources of HC Emissions	196
6.3.2	Non-limited Pollutant Components	200
6.4	Particle Emission in the Diesel Engine	203
6.4.1	Introduction	203
6.4.2	Polycyclic Aromatic Hydrocarbons	206
6.4.3	Soot Formation	208
6.4.4	Particle Emission Modeling	211
6.5	Nitrogen Oxides	214
6.5.1	Thermal NO	214
6.5.2	Prompt NO	218
6.5.3	NO Formed via N_2O	220
6.5.4	Fuel Nitrogen	220
6.5.5	Reactions Forming NO_2	221
	References	221

Part II Simulation of the Overall Process

7	Calculation of the Real Working Process	227
7.1	Single-Zone Cylinder Model	228
7.1.1	Fundamentals	228
7.1.2	Mechanical Work	230
7.1.3	Determination of the Mass Flow Through the Valves/Valve Lift Curves	230
7.1.4	Heat Transfer in the Cylinder	234
7.1.5	Heat Transfer in the Exhaust Manifold	243
7.1.6	Wall Temperature Models	244
7.1.7	The Heat Release Rate	248
7.1.8	Knocking Combustion	261
7.1.9	Internal Energy	264
7.2	The Two-Zone Cylinder Model	272
7.2.1	Modeling the High Pressure Range According to Hohlbaum	272

7.2.2 Modeling the High Pressure Phase According to Heider	275
7.2.3 Results of NO _x Calculation with Two-Zone Models	279
7.2.4 Modeling the Gas Exchange for a Two-Stroke Engine	279
7.3 Modeling the Gas Path	283
7.3.1 Modeling Peripheral Components	284
7.3.2 Model Building	285
7.3.3 Integration Methods	287
7.4 Gas Dynamics	288
7.4.1 Basic Equations of One-Dimensional Gas Dynamics	288
7.4.2 Numerical Solution Methods	292
7.4.3 Boundary Conditions	295
7.5 Fuel System Simulation	301
7.5.1 Modeling the Basic Components	301
7.5.2 Application Example	305
References	306
8 Charging of Internal Combustion Engines	309
8.1 Charging Methods	309
8.1.1 Pressure-Wave Charging	310
8.1.2 Mechanical Supercharging	313
8.1.3 Turbocharging	319
8.2 Simulation of Charging	332
8.2.1 Turbo Compressor	332
8.2.2 The Positive Displacement Charger	341
8.2.3 The Flow Turbine	341
8.2.4 Turbochargers	353
8.2.5 Charge Air Cooling	357
References	362
9 Exhaust Aftertreatment	363
9.1 Modeling and Simulation	364
9.2 Catalytic Converters	365
9.2.1 Basis Equations	365
9.2.2 Types of Catalytic Converters	368
9.3 Diesel Particulate Filter	373
9.3.1 Basic Equations	374
9.3.2 Soot Loading and Pressure Loss	377
9.3.3 Regeneration and Temperature Distribution	379
9.4 Dosing Units	380
9.5 System Simulation	382
References	383

Part III Simulation of Combustion and Charging

10	Total System Analysis	387
10.1	General Introduction	387
10.2	Thermal Engine Behavior	388
10.2.1	Basics	388
10.2.2	Coolant System	388
10.2.3	The Oil System	389
10.3	Engine Friction	390
10.3.1	Friction Method for the Warm Engine	390
10.3.2	Friction Method for the Warm-up	392
10.4	Stationary Simulation Results (Parameter Variations)	394
10.4.1	Load Variation in the Throttled SI Engine	394
10.4.2	Influence of Ignition and Combustion Duration	396
10.4.3	Variation of the Compression Ratio, Load, and Peak Pressure in Large Diesel Engine	398
10.4.4	Investigations of Fully Variable Valve Trains	399
10.4.5	Variation of the Intake Pipe Length and the Valve Durations (SI Engine, Full Load)	400
10.4.6	Exhaust Gas Recirculation in the Turbocharged Passenger Car Diesel Engine	401
10.5	Transient Simulation Results	404
10.5.1	Acceleration of a Commercial Vehicle from 0 to 80 km/h	404
10.5.2	Turbocharger Intervention Possibilities	406
10.5.3	Part Load in the ECE Test Cycle	409
10.5.4	The Warm-up Phase in the ECE Test Cycle	409
10.5.5	Full Load Acceleration in the Turbocharged SI Engine	412
	References	414
11	Phenomenological Combustion Models	415
11.1	Introduction	415
11.2	Diesel Engine Combustion	417
11.2.1	Zero-Dimensional Heat Release Function	417
11.2.2	Stationary Gas Jet	418
11.2.3	Packet Models	423
11.2.4	Time Scale Models	430
11.3	SI Engine Combustion	433
11.3.1	Laminar and Turbulent Flame Front Speed	433
11.3.2	Heat Release	435
11.3.3	Ignition	438
11.3.4	Knocking	439
	References	440

12	Three-Dimensional Flow Fields	443
12.1	Basic Fluid Mechanical Equations	443
12.1.1	Mass and Momentum Transport	443
12.1.2	Transport of Internal Energy and Species	447
12.1.3	Passive Scalars and the Mixture Fraction	449
12.1.4	Conservative Formulation of the Transport Equations	450
12.2	Turbulence and Turbulence Models	450
12.2.1	The Phenomenology of Turbulence	450
12.2.2	Modeling Turbulence	451
12.2.3	The Turbulent Law of the Wall	455
12.2.4	Modeling the Turbulent Mixture State	457
12.2.5	The Validity of Turbulence Models: Alternative Approaches	461
12.3	Numerics	465
12.3.1	The Finite Volume Method	465
12.3.2	Discretization of the Diffusion Term: Central Differences	466
12.3.3	Discretization of the Convection Term: The Upwind Scheme	467
12.3.4	Discretization of the Time Derivation: Implicit Scheme	469
12.3.5	Discretization of the Source Term	471
12.3.6	The Operator Split Method	472
12.3.7	Discretization and Numerical Solution of the Momentum Equation	472
12.4	Computational Meshes	473
12.5	Examples	475
12.5.1	Simulation of Flow Structures in the Cylinder: The SI Engine	475
12.5.2	Simulation of Flow Structures in the Cylinder: Diesel Engines	477
12.5.3	Internal Nozzle Flow	479
	References	482
13	Simulation of Injection Processes	483
13.1	Single-Droplet Processes	483
13.1.1	Momentum Exchange	484
13.1.2	Mass and Heat Exchange (Single-Component Model)	485
13.1.3	Mass and Heat Exchange in Multicomponent Modeling	488
13.1.4	Flashboiling	492
13.2	Spray Statistics	493
13.2.1	The Boltzmann–Williams Equation	494

13.2.2	The Numerical Solution of the Boltzmann–Williams Equation; the Standard Model (Lagrange Formulation) ...	496
13.2.3	Excursus: The Numerical Determination of Random Numbers	498
13.2.4	Parcel Start Conditions at the Nozzle Exit	500
13.2.5	Modeling Breakup Processes	501
13.2.6	Modeling Collision Processes	506
13.2.7	Modeling Turbulent Dispersion in the Standard Model ...	507
13.2.8	Describing Turbulent Dispersion with the Fokker–Planck Equation	508
13.2.9	Representing Diffusion with the Fokker–Planck Equation	514
13.2.10	Problems in the Standard Spray Model	517
13.2.11	Application Example: Direct Gasoline Injection for Stratified Charge with Centrally Arranged Piezo-Actuated Outward-Opening Injector	521
13.3	Euler Spray Models: Formulation of Spray Dynamics with Observable Averages	523
13.3.1	Locally Homogeneous Flow	525
13.3.2	The Embedding of 1D-Euler Methods and Other Approaches	527
13.3.3	The 3D Euler Method	530
	References	534
14	Simulation of Combustion	537
14.1	Excursus: Combustion Regimes	537
14.2	General Procedure	539
14.3	Diesel Combustion	541
14.3.1	Simulation of Heat Release	542
14.3.2	Ignition	549
14.3.3	NO _x Formation	550
14.3.4	Soot Formation	551
14.3.5	HC and CO Emissions	552
14.4	The Homogeneous SI Engine (Premixed Combustion)	553
14.4.1	The Two-Phase Problem	553
14.4.2	The Magnussen Model	556
14.4.3	Flame Surface Density Model	561
14.4.4	The G-Equation	564
14.4.5	The Diffusive G-Equation	568
14.4.6	Ignition	569
14.4.7	Knocking	569
14.4.8	Pollutant Formation	570
14.5	The SI Engine with Stratified Charge (Partially Premixed Flames)	570

- 14.6 Fluid-Mechanical Simulation of Charge Exchange, Mixture Formation and Combustion: Future Prospects 575
 - 14.6.1 Mesh Movement 576
 - 14.6.2 Numerics 577
 - 14.6.3 Turbulence 578
 - 14.6.4 Modeling Injection Processes 578
 - 14.6.5 Modeling Combustion 582
- References 583

- 15 3D Supercharging Simulations 585**
 - 15.1 Introduction 585
 - 15.2 Foundations of the 3D Simulation of Turbo-Machines 586
 - 15.2.1 The Treatment of Different and Various Moving Coordinate Systems 586
 - 15.2.2 Grid Generation for Turbo-Machines 589
 - 15.2.3 The Creation of Calculation Models and Boundary Conditions 591
