Preface — V

List of contributing authors — XIX

Yarini Arrebola Sánchez, Fabiola Almeida García, Daniel Ojeda del Sol,
Mario E. Valdés-Tresanco, Carlos David Ortiz, Belinda Sánchez Ramírez and
Isel Pascual Alonso

1	Dipeptidyl peptidase IV: a multifunctional enzyme with implications in several pathologies including cancer — 1
1.1	Introduction: cancer is coming and we need more and more effective weapons to stop or ameliorate it — 1
1.2	DPP-IV general characteristics: an interesting peptidase that is more than just an enzyme — 3
1.2.1	DPP-IV gene and protein expression: a vast picture across human tissues — 5
1.2.2	DPP-IV active site structure: catalytic triad, residues of interest and substrate specificity — 7
1.2.3	DPP-IV β -propeller domain: a singular structure from a singular protein — 7
1.2.4	DPP-IV cellular expression: a very wide spread molecule — 9
1.3	DPP-IV main functions: how versatile protein is DPP-IV! — 9
1.3.1	DPP-IV and metabolism: an old and well-documented story — 11
1.3.2	DPP-IV and the immune system: a story of a dual role and multiple effects — 15
1.3.3	DPP-IV and viral infections: the deadly MERS-CoV and SARS-Cov-2 — 16
1.3.4	DPP-IV and asthma: promising evidences (but in mice) — 17
1.3.5	DPP-IV and pulmonary hypertension: a field not very explored — 17
1.3.6	DPP-IV and pulmonary fibrosis: is this a story of inflammation, senescence or both? — 18
1.3.7	DPP-IV and cardiovascular system: cardio-protector effects of its inhibitions and possible causes — 18
1.4	DPP- IV and cancer: friend or foe? — 19
1.4.1	DPP-IV and leukemia: a protein often linked to worst prognosis — 19
1.4.2	DPP-IV in skin malignancies: a protein that vanishes in melanoma and rises in keratinocyte tumours — 20
1.4.3	DPP-IV in lung cancer: a voluble expression pattern — 21
1.4.4	DPP-IV and endometrial adenocarcinoma: an unsolved question — 22
1.4.5	DPP-IV in ovarian cancer: the importance of fibronectin — 22
1.4.6	DPP-IV in prostate cancer: a possible dependency on DPP-IV levels — 23
1.4.7	DPP-IV and thyroid gland: a very useful tool to discriminate among neoplasias, papillary and follicular carcinomas — 24
1.4.8	DPP-IV and neural tissue: gliomas, meningiomas and neuroblastomas — 25

1.4.9	DPP-IV and mesothelioma: a promising field to be explored —	26
1.4.10	DPP-IV and hepatocarcinoma: a rising not only in cancer, but precancerous pathologies —	26
1.4.11	DPP-IV and gastro-oesophageal junction adenocarcinoma (EGJA): a shortcut to early diagnosis —	27
1.4.12	DPP-IV and colorectal cancers: a protein that remains upregulated from early stages to metastasis —	27
1.4.13	DPP-IV and extracellular matrix proteins or cytoskeleton proteins: a possible way into metastasis —	28
1.4.14	DPP-IV, GLP-1 and cancer: concerns about pancreas —	31
1.4.15	DPP-IV inhibitors and cancer: a tenue light at the end of the tunnel —	32
1.5	Conclusions —	36
	References —	36

Abiodun Oladipo, Onome Ejeromedoghene, Ademola Adebayo, Olakunle Ogunyemi, and George Egejuru

2 A mini review on the prospects of *Fagara zanthoxyloides* extract based composites: a remedy for COVID-19 and associated replica? — 57

2.1	Introduction —	58
2.2	The state of Covid-19, mode of transmission and treatment —	59
2.3	Herbal remedies —	61
2.4	<i>Fagara zanthoxyloides</i> extracts —	63
2.5	The broad biomedical application of fagara extracts —	65
2.5.1	Antibacterial activities —	65
2.5.2	Antiviral activities —	66
2.6	Composites of <i>Fagara zanthoxyloides</i> extracts —	66
2.7	Conclusion and prospects —	69
	References —	69

Danielle Sinkam Gozo, Calixte Tonbou and Jean Momeni

3 Triterpenoids of antibacterial extracts from the leaves of *Bersama abyssinica* Fresen (Francoaceae) — 75

3.1	Introduction —	75
3.2	Material and methods —	76
3.2.1	Chemical reagents and equipment —	76
3.2.2	Bacterial strains —	76
3.2.3	Plant material —	77
3.2.4	Extraction and isolation of secondary metabolites —	77
3.2.5	Determination of total polyphenols by the Folin-Ciocalteu method —	77
3.2.6	Antibacterial activity —	78
3.2.7	Data analysis —	78

3.3	Results and discussion —	79
3.3.1	Results of extraction, screening phytochemical and total polyphenol —	79
3.3.2	Result of isolation —	80
3.3.3	Result of antibacterial activity —	82
3.4	Conclusions —	83
	References —	84

Charles I. Aghanwa, Uche E. Ekpunobi and Adaora Ogbuagu

4 Physicochemical assessment and *insilico* studies on the interaction of 5-HT_{2c} receptor with herbal medication bioactive compounds used in the treatment of premature ejaculation — 87

4.1	Introduction —	88
4.2	Methods —	90
4.2.1	Sampling of herbal medicine —	90
4.2.2	Proximate analysis —	90
4.2.3	Phytochemical analysis —	92
4.2.4	Heavy metal analysis —	94
4.2.5	Gas Chromatography–Mass Spectrometry Analysis (GC-MS) [38] —	94
4.2.6	In Silico Docking (Molecular Docking) —	95
4.3	Results and discussions —	96
4.3.1	Proximate analysis —	96
4.3.2	Phytochemical analysis —	97
4.3.3	Heavy metals analysis —	99
4.3.4	Chemical constituents analysis —	100
4.3.5	Molecular docking analysis —	103
4.3.6	ADMET Studies —	107
4.4	Conclusions —	116
	References —	116

Tati Suhartati, Novita Andriyani, Yandri Yandri and Sutopo Hadi

5 Xanthoangelol, geranilated chalcone compound, isolation from pudau leaves (*Artocarpus kemando* Miq.) as antibacterial and anticancer — 121

5.1	Introduction —	121
5.2	Methods —	122
5.2.1	General —	122
5.2.2	Sample preparation —	123
5.2.3	Anti-bacterial and anti-cancer test —	123
5.3	Results and discussions —	123
5.3.1	Isolation of flavonoid compounds —	123
5.3.2	Structural analysis —	124
5.3.3	Antibacterial bioactivity test —	130

5.3.4	Anticancer bioactivity test —	134
5.4	Conclusions —	135
	References —	135

Misbaudeen Abdul-Hammed, Isah Adewale Bello, Monsurat Olajide,
Ibrahim Olaide Adedotun, Tolulope Irapada Afolabi, Ayobami Abimbola Ibironke and
Barakat Dasola Adebayo

6 Exploration of bioactive compounds from *Mangifera indica* (Mango) as probable inhibitors of thymidylate synthase and nuclear factor kappa-B (NF- κ B) in colorectal cancer management — 137

6.1	Introduction —	138
6.2	Materials and methods —	140
6.2.1	Preparation of the target receptor: Thymidylate synthase (PDB ID: 6QXH) and (NF- κ B) (PDB ID: 1A3Q) —	140
6.2.2	Preparation of ligands and geometry optimization —	141
6.2.3	Determination of active sites of the target receptors —	141
6.2.4	ADMET predictions —	141
6.2.5	Drug-likeness predictions —	141
6.2.6	Molecular docking protocol —	141
6.2.7	Oral bioavailability and PASS predictions —	142
6.3	Results and discussions —	142
6.3.1	Validation of the active sites of the receptors —	142
6.3.2	ADMET/pharmacokinetic prediction analysis —	144
6.3.3	Drug-likeness prediction —	153
6.3.4	Molecular docking analysis —	153
6.3.5	Oral bioavailability analysis —	159
6.3.6	Prediction of activity spectra for substances (PASS) —	161
6.4	Conclusions —	161
	References —	162

Monsurat Olajide, Misbaudeen Abdul-Hammed, Isah Adewale Bello,
Ibrahim Olaide Adedotun and Tolulope Irapada Afolabi

7 Identification of potential inhibitors of thymidylate synthase (TS) (PDB ID: 6QXH) and nuclear factor kappa-B (NF- κ B) (PDB ID: 1A3Q) from *Capsicum annuum* (bell pepper) towards the development of new therapeutic drugs against colorectal cancer (CRC) — 165

7.1	Introduction —	166
7.2	Materials and methods —	168
7.2.1	Preparation of target receptors —	168
7.2.2	Preparation and geometry optimization of the ligands —	169
7.2.3	Determination of active sites of the target receptors —	169

7.2.4	Predictions of ADMET properties of the compounds —	169
7.2.5	Drug-likeness predictions of the compounds —	169
7.2.6	Oral bioavailability and PASS analysis —	169
7.2.7	Molecular docking studies —	170
7.3	Result and discussions —	170
7.3.1	Validation of the active sites in the target receptors —	170
7.3.2	ADMET predictions —	172
7.3.3	Drug-likeness analysis —	173
7.3.4	Molecular docking analysis —	173
7.3.5	Oral bioavailability of the ligands and standard drugs —	189
7.3.6	Bioactivity of the selected compounds and standard drugs —	192
7.3.7	PASS analysis —	193
7.4	Conclusions —	195
	References —	195

Sutopo Hadi, Ermin Katrin Winarno, Hendig Winarno, Khairun Nisa Berawi, Tati Suhartati, Yandri Yandri and Wasinton Simanjuntak

8 Synthesis, characterization and in vitro activity study of some organotin(IV) carboxylates against leukemia cancer cell, L-1210 — 199

8.1	Introduction —	199
8.2	Experimental —	200
8.2.1	Materials —	200
8.2.2	Characterization techniques —	200
8.2.3	Preparation of organotin(IV) carboxylates —	200
8.2.4	Bioassay anticancer activity test against leukemia cancer cell, L-1210 —	201
8.3	Results and discussion —	201
8.4	Conclusions —	205
	References —	205

Ibrahim Olaide Adedotun, Misbaudeen Abdul-Hammed, Bamidele Toheeb Towolawi, Tolulope Irapada Afolabi, Karimot Motunrayo Mufutau and Hadijat Motunrayo Adegoke

9 Phytochemicals from *Annona muricata* (Sour Sop) as potential inhibitors of SARS-CoV-2 main protease (M^{Pro}) and spike receptor protein: a structure-based drug design studies and chemoinformatics analyses — 207

9.1	Introduction —	208
9.2	Materials and methods —	208
9.2.1	Ligand preparation —	208
9.2.2	Protein structure preparation —	209
9.2.3	Drug-likeness and ADMET profiling analysis —	209
9.2.4	Prediction of activity spectra for substances (PASS) and oral bioactivity assessment —	210

9.2.5	Molecular docking studies —	210
9.3	Results and discussion —	210
9.3.1	ADMET and drug-likeness analyses —	210
9.3.2	Bioactivity and oral-bioavailability assessment —	214
9.3.3	Virtual screening analysis —	215
9.4	Conclusion —	219
	References —	230

Ibrahim Olaide Adedotun, Misbaudeen Abdul-Hammed, Basirat Temidayo Egunjobi, Ubeydat Temitope Ismail, Jemilat Yetunde Yusuf, Tolulope Irapada Afolabi and Ibrahim Olajide Gbadebo

10 Identification of novel inhibitors of P13K/AKT pathways: an integrated *in-silico* study towards the development of a new therapeutic agent against ovarian cancer — 231

10.1	Introduction —	232
10.2	Materials and methods —	233
10.2.1	Ligand preparation —	233
10.2.2	Preparation of target receptor —	239
10.2.3	Determination of (5DXT and 2JDR) active sites —	240
10.2.4	Molecular docking simulation —	240
10.2.5	Prediction of Activity Spectra for Substances (PASS) —	240
10.2.6	Assessment of pharmacokinetic properties —	241
10.3	Results and discussion —	241
10.3.1	Protein kinase B (PKB Beta/Akt2) and Phosphoinositide-3-kinase (PI3K) structure and active site analysis —	241
10.3.2	ADMET assay of the ligands —	241
10.3.3	Drug likeness analysis of the selected compounds —	242
10.3.4	Molecular docking analysis —	249
10.3.5	Oral bioavailability of the passed compounds —	249
10.3.6	Prediction of activity spectra for substances (PASS) —	254
10.3.7	Bioactivity of the selected compounds —	254
10.3.8	Binding mode and Molecular interactions —	256
10.4	Conclusions —	258
	References —	258

Yandri Yandri, Hendri Ropingi, Tati Suhartati, Bambang Irawan and Sutopo Hadi

11 Immobilization of α -amylase from *Aspergillus fumigatus* using adsorption method onto zeolite — 261

11.1	Introduction —	261
11.2	Materials and methods —	263
11.2.1	Materials —	263

11.2.2	Research Procedures —	264
11.3	Results and discussions —	265
11.3.1	Determination of optimum temperature —	265
11.3.2	Determination of K_M and V_{max} values —	267
11.3.3	Thermal stability —	268
11.3.4	Reusability assay —	270
11.4	Conclusions —	270
	References —	271

Enitan Omobolanle Adesanya, Olubunkunola Oluwole Oyesiku, Olumide Olatunde Adesanya, Akingbolabo Daniel Ogunlakin, Adeshina Isaiah Odugbemi and Samuel Ayodele Egieyeh

12 Phytochemical components and GC-MS analysis of *Petiveria alliacea* L. fractions and volatile oils — 273

12.1	Introduction —	274
12.2	Materials and methods —	275
12.2.1	Materials —	275
12.2.2	Methods —	277
12.3	Results and discussion —	279
12.4	Conclusions —	283
	References —	284

Emmanuel Mshelia Halilu

13 Characterization of crude saponins from stem bark extract of *Parinari curatellifolia* and evaluation of its antioxidant and antibacterial activities — 287

13.1	Introduction —	288
13.2	Methodology —	289
13.2.1	Collection, identification and preparation —	289
13.2.2	Extraction of crude saponins —	289
13.2.3	Solubility study —	290
13.2.4	Phytochemical screening for saponins —	290
13.2.5	Thin layer chromatography —	291
13.2.6	Fluorescence analysis of crude saponins —	291
13.2.7	UV finger and FTIR finger printing —	291
13.2.8	Synthesis of silver nanoparticles —	291
13.2.9	Antioxidant studies —	292
13.2.10	Antibacterial studies —	292
13.2.11	Statistical analysis —	293
13.3	Results and discussion —	293
13.3.1	Extraction and solubility of crude saponins —	293
13.3.2	Phytochemical studies —	293

13.3.3	Fluorescence analysis and thin layer chromatographic separation profile of the crude saponins — 297
13.3.4	UV finger printing of crude saponin and FTIR finger printing crude saponin — 298
13.3.5	Synthesis of silver nanoparticles and characterization of nanoparticles — 299
13.3.6	Antioxidant studies — 301
13.3.7	Antibacterial activity — 302
13.4	Conclusions — 303
	References — 303

Emmanuel Mshelia Halilu and Nafisa Kudu Muhammad

14 Physicochemical and free radical scavenging activity of *Adansonia digitata* seed oil — 307

14.1	Introduction — 307
14.2	Methodology — 309
14.2.1	Collection and identification of <i>Adansonia digitata</i> seeds — 309
14.2.2	Preparation of seed for oil extraction — 309
14.2.3	Organoleptic evaluation of powdered sample of <i>Adansonia digitata</i> — 309
14.2.4	Physicochemical Studies — 310
14.2.5	Extraction of oil — 310
14.2.6	Evaluation of organoleptic characters of the fixed oil — 310
14.2.7	Solubility testing — 310
14.2.8	Specific gravity determination — 310
14.2.9	Qualitative phytochemical screening on the oil — 311
14.2.10	Oil Analyses — 311
14.2.11	GC-MS analysis — 311
14.2.12	Antioxidant studies — 312
14.2.13	Toxicity study — 312
14.2.14	Data analysis — 313
14.3	Results and discussion — 313
14.3.1	Organoleptic evaluation of powdered sample of <i>Adansonia digitata</i> seeds — 313
14.3.2	Physicochemical evaluation — 313
14.3.3	Extraction of oil — 314
14.3.4	Organoleptic evaluation of the oil — 314
14.3.5	Solubility studies — 314
14.3.6	Qualitative phytochemical screening — 314
14.3.7	TLC profile of <i>Adansonia digitata</i> oil — 315
14.3.8	GC-MS analysis of <i>Adansonia digitata</i> oil — 315
14.3.9	Oil analyses — 316
14.3.10	Acute toxicity (LD ₅₀) studies — 317

14.3.11	Antioxidant studies —	317
14.4	Conclusions —	318
	References —	318

Radia Ayad, Mostefa Lefahal, El Hani Makhoulfi and Salah Akkal

15	Photoprotection strategies with antioxidant extracts: a new vision —	321
15.1	Introduction —	321
15.2	Material and methods —	323
15.3	Results and discussions —	323
15.3.1	Photostability —	323
15.3.2	Adverse effects in human beings —	323
15.3.3	Adverse effects on environment and marine organisms —	324
15.3.4	Plant extracts as sustainable ingredients for sunscreens and cosmetic formulations —	324
15.3.5	Antioxidant polyphenols as photoprotective agents —	326
15.3.6	Application of green extraction processes for the cosmetic industries —	327
15.3.7	Green extraction, green chemistry, and green cosmetics —	329
15.4	Conclusions —	330
	References —	330

Shayeri Das, Prabhat Ranjan and Tanmoy Chakraborty

16	A systematic DFT study of arsenic doped iron cluster AsFe_n ($n = 1-4$) —	335
16.1	Introduction —	335
16.2	Computational details —	336
16.3	Results and discussion —	337
16.3.1	Equilibrium geometry —	337
16.3.2	CDFT based descriptors —	338
16.4	Conclusions —	340
	References —	340

Antony Mugiira Arimba, David Kuria Wamukuru and Zachary Orato Anditi

17	Effect of case-based learning, team-based learning and regular teaching methods on secondary school students' self-concept in chemistry in Maara sub-county, Tharaka Nithi county, Kenya —	345
17.1	Introduction —	346
17.2	Purpose of the study —	348
17.3	Objective of the study —	348
17.4	Hypotheses of study —	348
17.5	Research design —	348
17.6	Population of study —	349
17.7	Instrumentation —	349

17.8	Students' self-concept questionnaire (SSCQ) —	349
17.9	Validity of instrument —	350
17.10	Reliability of instrument —	350
17.11	Treatment of study —	350
17.12	Data collection procedures —	351
17.13	Analysis of data —	351
17.14	Effects of CBL, TBL and RTM on students' chemistry self-concept —	351
17.15	Summary of findings —	354
17.16	Conclusions —	355
17.17	Recommendations for improvement —	355
17.18	Suggestions for further research —	355
	References —	355

Chetana Deoghare

18 Random and block architectures of *N*-arylitaconimide monomers with methyl methacrylate — 359

18.1	Introduction —	360
18.2	Conventional FRP —	361
18.3	Conventional FRP of IIs —	361
18.4	RDRPs —	362
18.5	ATRP —	363
18.5.1	Kinetics of ATRP —	364
