Preface — VII

Acknowledgment — IX

1	The basic theory of harmonic vibrations — 1
1.1	Three elementary parts of a vibration system — 2
1.2	Undamped harmonic free vibrations — 3
1.3	Free vibrations with damping — 5
1.4	Computations of natural frequency and damping ratio — 9
1.5	Harmonically forced vibrations — 11
1.6	Complete response to harmonically driven system — 20
1.7	Phasor for analysis of stationary harmonic response — 23
1.8	Measurement of mass–spring system by scanning — 26
1.9	Exercises — 27
	Bibliography — 28
2	Vibrations driven by deterministic forces — 29
2.1	Fourier series and spectrum functions — 29
2.2	Parseval's rule — 39
2.3	Responses to systems driven by periodic forces — 39
2.4	Exercises — 41
	Bibliography — 42
3	Fourier transform and spectra — 43
3.1	Basics of Fourier transform — 43
3.2	Impulse (delta) function — 47
3.3	Response measurement using impulse function — 51
3.4	Practical realizations of impulse function — 52
3.5	Basic properties of Fourier transform — 54
3.6	Convolution — 61
3.7	Exercises — 63
	Bibliography — 64
4	Responses driven by deterministically aperiodic forces — 65
4.1	Frequency transfer function — 65
4.2	Impulse response function — 67
4.3	Step response function — 68
4.4	Applications of impulse and frequency transfer functions — 70

4.5	Exercises — 76
	Bibliography — 77
5	Vibrations with multiple degrees-of-freedom — 79
5.1	Degrees-of-freedom — 79
5.2	Vibration equations with two DOF — 80
5.3	Free response to vibration systems with two DOF without damping — 82
5.4	Free response to vibration systems with MDOF without damping — 91
5.5	Modal analysis — 97
5.6	Frequency transfer matrix of damped vibration systems with MDOF — 105
5.7	Exercises — 108
	Bibliography — 109
6	Vibrations of distributed systems — 111
6.1	Longitudinal vibrations of uniform circular beams — 111
6.2	Lateral vibrations of beams — 124
6.3	Problems proposed for engineering vibrations — 143
6.4	Exercises — 143
	Bibliography — 144
7	Six classes of fractional vibrations — 145
7.1	Fractional derivatives and integrals — 145
7.2	Fractional vibrators — 148
7.3	Fractional derivatives: a convolution point of view — 149
7.4	Exercises — 151
	Bibliography — 152
8	Fractional vibrators of class I — 157
8.1	Equivalent motion equation of fractional vibrators of Class I — 157
8.2	Quasiequivalent parameters of fractional vibrators of class I — 158
8.3	Free response of a fractional vibrator in class I — 166
8.4	Impulse response of a class I fractional vibrator — 167
8.5	Step response of a class I fractional vibrator — 172
8.6	Frequency transfer function of a fractional vibrator of class I — 174
8.7	Quasiequivalent logarithmic decrement and Q factor of fractional vibrators of class I — 176
8.8	Concluding remark — 180
8.9	Exercises — 181
	Bibliography — 181

9	Fractional vibrators of class II — 183
9.1	Equivalent motion equation of class II fractional vibrators — 183
9.2	Quasiequivalent parameters of class II fractional vibrators — 184
9.3	Free response of class II fractional vibrators — 191
9.4	Impulse response for class II fractional vibrators — 193
9.5	Unit step response of class II fractional vibrators — 194
9.6	Frequency transfer function of class II fractional vibrators — 195
9.7	Quasiequivalent logarithmic decrement and Q factor of class II fractional vibrators — 198
9.8	Concluding remark — 202
9.9	Exercises — 202
	Bibliography — 202
10	Fractional vibrators of class III — 203
10.1	Equivalent motion equation of class III fractional vibrators — 203
10.2	Quasiequivalent parameters of class III fractional vibrators — 204
10.3	Free response of class III fractional vibrators — 220
10.4	Impulse response of class III fractional vibrators — 222
10.5	Step response of class III fractional vibrators — 224
10.6	Frequency transfer function for class III fractional vibrators — 226
10.7	Quasiequivalent logarithmic decrement and Q factor of class III fractional vibrators — 227
10.8	Concluding remark — 234
10.9	Exercises — 235
	Bibliography — 235
11	Fractional vibrators of class IV — 237
11.1	Equivalent motion equation of class IV fractional vibrators — 237
11.2	Quasiequivalent parameters of class IV fractional vibrators — 238
11.3	Free response of class IV fractional vibrators — 249
11.4	Impulse response of class IV fractional vibrators — 251
11.5	Step response of class IV fractional vibrators — 254
11.6	Frequency transfer function for fractional vibrators of class IV — 256
11.7	Quasiequivalent logarithmic decrement and Q factor of class IV fractional vibrators — 256
11.8	Concluding remark — 259
11.9	Exercises — 262
	Bibliography — 262
12	Fractional vibrators of class V — 263
12.1	Equivalent motion equation of class V fractional vibrators — 263
12.2	Quasiequivalent parameters of class V fractional vibrators — 263

12.3	Free response of class V fractional vibrators —	269
12.4	Impulse response of class V fractional vibrators —	270
12.5	Step response of class V fractional vibrators —	271
12.6	Frequency transfer function for class V fractional vibrators —	273
12.7	Quasiequivalent logarithmic decrement and Q factor of class V fractional vibrators —	273
12.8	Concluding remark —	276
12.9	Exercises —	276
13	Fractional vibrators of class VI —	277
13.1	Equivalent motion equation of fractional vibrators of Class VI —	277
13.2	Quasiequivalent parameters of class VI fractional vibrators —	278
13.3	Free response of class VI fractional vibrators —	290
13.4	Impulse response for fractional vibrators of class VI —	292
13.5	Step response of fractional vibrators of class VI —	292
13.6	Frequency transfer function for fractional vibrators of class VI —	293
13.7	Quasiequivalent logarithmic decrement and Q factor of class VI fractional vibrators —	297
13.8	Concluding remark —	299
13.9	Exercises —	299
14	Mathematical explanation of Rayleigh damping assumption —	301
14.1	Rayleigh damping assumption —	301
14.2	Explanation 1 with fractional vibrators of class IV —	302
14.3	Explanation 2 with fractional vibrators of class I —	303
14.4	Explanation 3 with fractional vibrators of class V —	303
14.5	Explanation 4 with fractional vibrators of class VI —	304
14.6	Exercises —	304
	Bibliography —	304
15	Mass —	307
15.1	Mass in the restricted theory of relativity —	307
15.2	Mass in the vibration motions of class I —	307
15.3	Mass in the vibration motions of class II —	308
15.4	Exercises —	308
	Bibliography —	308
16	Postscript —	309
16.1	Engineering considerations —	309
16.2	Theoretical considerations —	310
	Bibliography —	310

A Appendices — 313**A.1 Table of Weyl Fractional Derivatives — 313****A.2 Table of Fourier Transforms — 313****Index — 315**
