Chapter 1

Hilbert Theory of Trace and Interpolation Spaces

1. Some Function Spaces	1
1.1 Sobolev Spaces	1
1.2 The Case of the Entire Space	4
1.3 The Half-Space Case	6
1.4 Orientation	8
2. Intermediate Derivatives Theorem	9
2.1 Intermediate Spaces	9
2.2 Density and Extension Theorems.	10
2.3 Intermediate Derivatives Theorem	14
2.4 A Simple Example	18
2.5 Interpolation Inequality	19
3. Trace Theorem	19
3.1 Continuity Properties of the Elements of $W(a, b)$	19
3.2 Trace Theorem	21
4. Trace Spaces and Non-Integer Order Derivatives.	23
4.1 Orientation, Definitions	23
4.2 "Intermediate Derivatives" and Trace Theorems	24
5. Interpolation Theorem	27
5.1 Main Theorem	27
5.2 Interpolation of a Family of Operators	27
6. Reiteration Properties and Duality of the Spaces $[X, Y]_\theta$	28
6.1 Reiteration	28
6.2 Duality	29
7. The Spaces $H^s(\mathbf{R}^n)$ and $H^s(\Gamma)$	30
7.1 $H^s(\mathbf{R}^n)$ -Spaces	30
7.2 Traces on the Boundary of a Half-Space	33
7.3 $H^s(\Gamma)$ -Spaces	34
8. Trace Theorem in $H^m(\Omega)$	38
8.1 Extension and Density Theorems.	38
8.2 Trace Theorem	39
9. The Spaces $H^s(\Omega)$, Real $s \geq 0$	40
9.1 Definition by Interpolation	40
9.2 Trace Theorem in $H^s(\Omega)$	41

9.3	Interpolation of $H^s(\Omega)$ -Spaces	43
9.4	Regularity Properties of $H^s(\Omega)$ -Functions	45
10.	Some Further Properties of the Spaces $[X, Y]_\theta$	47
10.1	Domains of Semi-Groups	47
10.2	Application to $H^s(\mathbf{R}^n)$	51
10.3	Application to $H^s(0, \infty)$	54
11.	Subspaces of $H^s(\Omega)$. The Spaces $H^s_0(\Omega)$	54
11.1	$H^s_0(\Omega)$ -Spaces	54
11.2	A Property of $H^s(\Omega)$, $0 \leq s < \frac{1}{2}$	57
11.3	The Extension by 0 outside Ω	60
11.4	Characterization of $H^s_0(\Omega)$ -Spaces	62
11.5	Interpolation of $H^s_0(\Omega)$ -Spaces	64
12.	The Spaces $H^{-s}(\Omega)$, $s > 0$	70
12.1	Definition. First Properties	70
12.2	Interpolation between the Spaces $H^{-s}(\Omega)$, $s > 0$	71
12.3	Interpolation between $H^{s_1}_0(\Gamma)$ and $H^{-s_2}(\Omega)$, $s_i > 0$	72
12.4	Interpolation between $H^{s_1}(\Omega)$ and $H^{-s_2}(\Omega)$, $s_i > 0$	73
12.5	Interpolation between $H^{s_1}(\Omega)$ and $(H^{s_2}(\Omega))'$	76
12.6	Interpolation between $H^{s_1}_0(\Omega)$ and $(H^{s_2}(\Omega))'$	77
12.7	A Lemma	79
12.8	Differential Operators on $H^s(\Omega)$	85
12.9	Invariance by Diffeomorphism of $H^s(\Omega)$ -Spaces	85
13.	Intersection Interpolation	86
13.1	A General Result	86
13.2	Example of Application (I)	87
13.3	Example of Application (II)	87
13.4	Interpolation of Quotient Spaces	90
14.	Holomorphic Interpolation	91
14.1	General Result	91
14.2	Interpolation of Spaces of Continuous Functions with Hilbert Range	94
14.3	A Result Pertaining to Interpolation of Subspaces	96
15.	Another Intrinsic Definition of the Spaces $[X, Y]_\theta$	98
16.	Compactness Properties	99
17.	Comments	103
18.	Problems	106

Chapter 2

Elliptic Operators. Hilbert Theory

1.	Elliptic Operators and Regular Boundary Value Problems	109
1.1	Elliptic Operators	109
1.2	Properly and Strongly Elliptic Operators	110
1.3	Regularity Hypotheses on the Open Set Ω and the Coefficients of the Operator A	111
1.4	The Boundary Operators	112

2. Green's Formula and Adjoint Boundary Value Problems	114
2.1 The Adjoint of A in the Sense of Distributions or Formal Adjoint	114
2.2 The Theorem on Green's Formula	114
2.3 Proof of the Theorem	115
2.4 A Variant of Green's Formula	120
2.5 Formal Adjoint Problems with Respect to Green's Formula	121
3. The Regularity of Solutions of Elliptic Equations in the Interior of Ω	121
3.1 Two Lemmas	121
3.2 A priori Estimates in $\mathbf{R}^n$	123
3.3 The Regularity in the Interior of Ω and the Hypocoellipticity of Elliptic Operators	125
4. A priori Estimates in the Half-Space	127
4.1 A new Formulation of the Covering Condition	127
4.2 A Lemma on Ordinary Differential Equations	130
4.3 First Application: Proof of Theorem 2.2	133
4.4 A priori Estimates in the Half-Space for the Case of Constant Coefficients	136
4.5 A priori Estimates in the Half-Space for the Case of Variable Coefficients	142
5. A priori Estimates in the Open Set Ω and the Existence of Solutions in $H^s(\Omega)$ -Spaces, with Real $s \geq 2m$	148
5.1 A priori Estimates in the Open Set Ω	148
5.2 Existence of Solutions in $H^s(\Omega)$ -Spaces, with Integer $s \geq 2m$	152
5.3 Precise Statement of the Compatibility Conditions for Existence	155
5.4 Existence of Solutions in $H^s(\Omega)$ -Spaces, with Real $s \geq 2m$	165
6. Application of Transposition: Existence of Solutions in $H^s(\Omega)$ -Spaces, with Real $s \leq 0$	166
6.1 The Transposition Method; Generalities	166
6.2 Choice of the Form L	167
6.3 The Spaces $\mathcal{E}(\Omega)$ and $D_A^s(\Omega)$	170
6.4 Density Theorem	173
6.5 Trace Theorem, and Green's Formula for the Space $D_A^s(\Omega)$, $s \leq 0$	175
6.6 Existence of Solutions in $D_A^s(\Omega)$ -Spaces, with Real $s \leq 0$	177
7. Application of Interpolation: Existence of Solutions in $H^s(\Omega)$ -Spaces, with Real s , $0 < s < 2m$	180
7.1 New Properties of $\mathcal{E}^s(\Omega)$ -Spaces	180
7.2 Use of Interpolation; First Results	185
7.3 The Final Results	187
8. Complements and Generalizations	191
8.1 Continuity of Traces on Surfaces Neighbouring Γ	191
8.2 A Generalization; Application to Dirichlet's Problem	194
8.3 Remarks on the Hypotheses on A and B_j	195
8.4 The Realization of A in $L^2(\Omega)$	196
8.5 Some Remarks on the Index of $\mathcal{P}$	198
8.6 Uniqueness and Surjectivity Theorems	199

9. Variational Theory of Boundary Value Problems	200
9.1 Variational Problems	200
9.2 The Problem	203
9.3 A Counter-Example	203
9.4 Variational Formulation and Green's Formula	204
9.5 "Concrete" Variational Problems	207
9.6 Coercive Forms and Problems	209
9.7 Regularity of Solutions	212
9.8 Generalizations (I)	212
9.9 Generalizations (II)	214
10. Comments	216
11. Problems	225

Chapter 3

Variational Evolution Equations

1. An Isomorphism Theorem	227
1.1 Notation	227
1.2 Isomorphism Theorem	230
1.3 The Adjoint A^*	230
1.4 Proof of Theorem 1.1	230
2. Transposition	231
2.1 Generalities	231
2.2 Adjoint Isomorphism Theorem	232
2.3 Transposition	232
3. Interpolation	233
3.1 General Application	233
3.2 Characterization of Interpolation Spaces	233
3.3 The Case " $\theta = \frac{1}{2}$ "	234
4. Example: Abstract Parabolic Equations, Initial Condition Problem (I)	234
4.1 Notation	234
4.2 The Operator M	235
4.3 The Operator A	237
4.4 Application of the Isomorphism Theorems	238
4.5 Choice of L in (4.20)	239
4.6 Interpretation of the Problem	241
4.7 Examples	243
5. Example: Abstract Parabolic Equations, Initial Condition Problem (II)	255
5.1 Some Interpolation Results	255
5.2 Interpretation of the Spaces $\Phi^{1/2}$, $\Phi_*^{1/2}$	257
6. Example: Abstract Parabolic Equations, Periodic Solutions	258
6.1 Notation. The Operator A	258
6.2 Application of the Isomorphism Theorems	259
6.3 Choice of L	259
6.4 Interpretation of the Problem	260
6.5 The Isomorphism of $\Phi^{1/2}$ onto its Dual	261

7. Elliptic Regularization	261
7.1 The Elliptic Problem	261
7.2 Passage to the Limit	262
8. Equations of the Second Order in t	265
8.1 Notation	265
8.2 Existence and Uniqueness Theorem.	265
8.3 Remarks on the Application of the General Theory of Section 1	270
8.4 Additional Regularity Results	275
8.5 Parabolic Regularization; Direct Method and Application	280
9. Equations of the Second Order in t ; Transposition	283
9.1 Adjoint Isomorphism	283
9.2 Transposition	283
9.3 Choice of L	284
9.4 Trace Theorem	285
9.5 Variant; Direct Method	287
9.6 Examples	292
10. Schroedinger Type Equations.	299
10.1 Notation	299
10.2 Existence and Uniqueness Theorem	299
11. Schroedinger Type Equations; Transposition	302
11.1 Adjoint Isomorphism	302
11.2 Transposition of (11.5)	303
11.3 Choice of L	303
12. Comments	304
13. Problems	307
Bibliography.	309
